Dimension symbols are compliant with ISO13399

The following table shows ISO13399-compliant dimension symbols. Contents corresponding to the sample symbols/notations are shown below. Tool shape diagrams and stock charts use the symbols and notation examples from the table below.

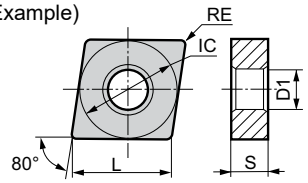

(1) Inserts (For Turning / For Milling)

Symbol	Description
AN	Clearance angle major
APMX	Depth of cut maximum
BS	Wiper edge length
CDX	Cutting depth maximum
CHW	Corner chamfer width
CW	Cutting width
D1	Fixing hole diameter
DMIN	Minimum bore diameter
IC	Inscribed circle diameter
INSL	Insert length
L	Cutting edge length
PDX	Profile distance ex
PDY	Profile distance ey
PNA	Profile included angle
RE	Corner radius
RER	Right side corner radius
REL	Left side corner radius
S	Insert thickness
W1	Insert width
WF	Functional width

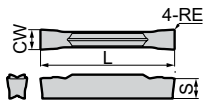

(2) Tool Holders For Turning

Symbol	Description
APMX	Depth of cut maximum
B	Shank width
BD	Body diameter
CDX	Cutting depth maximum
CRKS	Connection retention knob thread size
DC	Cutting diameter
DCB	Connection bore diameter
DCON	Connection diameter
DCSFMS	Contact surface diameter machine side
DMIN	Minimum bore diameter
DMM	Shank diameter
DN	Neck diameter
GAMF	Rake angle radial
GAMP	Rake angle axial
H	Shank height
HBH	Head bottom offset height

Notice

Thank you for using the Sumitomo Electric Hardmetal General Catalogue
(Sumitomo/SUMIBORON/SUMIDIA Cutting Tools Catalogue).

This catalogue presents the major items in the Sumitomo Cutting Tools product line.
The catalogue ist organised as follows:
(1) Cutting Tool Grades
(2) Sumitomo Products
(3) SUMIBORON, SUMIDIA Products
Ask for our brochures and pamphlets.
This catalogue is current as of January 2022.

As a result ot our ongoing research, product may reflect enhancements in qualitiy, performance and specifications not listed in this catalogue.
To order Sumitomo/SUMIBORON/SUMIDIA products, contact your nearest Sumitomo Electric Hardmetal dealer or distributor.
For inquiries or other requests, feel free to contact your nearest sales office.

T1000A / T1500A / T1500Z / T2500Z

T1000A High-hardness cermet with outstanding wear resistance and toughness. Realises high dimensional accuracy for continuous steel machining or finishing of Sintered Alloy or cast iron.

T1500A General-purpose cermet made from hard grains with different grain sizes, delivering functionality that provides an excellent balance of wear resistance and toughness. Also achieves good surface finish quality.

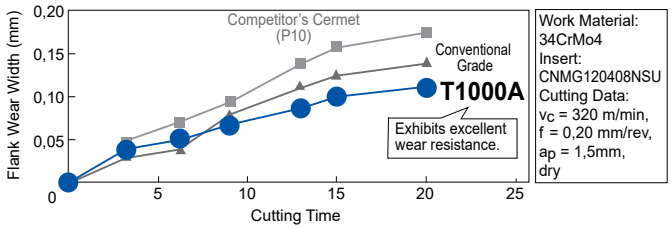

T1500Z Employs Brilliant Coat PVD coating with excellent lubricity to provide better wear resistance and consistent surface finishes in low-speed cutting applications such as machining of small products or low carbon steel.

T2500Z A new cermet substrate with excellent thermal conductivity is used to achieve outstanding thermal crack resistance. Also uses Brilliant Coat, which has excellent lubricity.

AC8015P / AC8020P / AC8025P / AC8035P / AC1030U

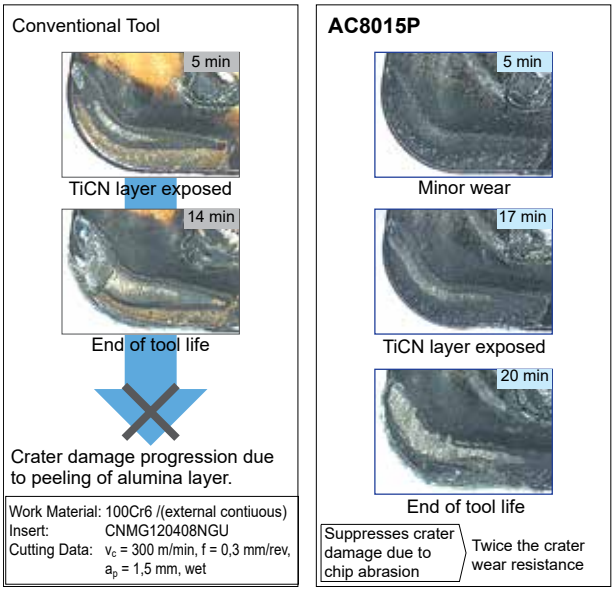

Covers a wide range of machining applications from high-speed cutting to interrupted cutting and small lathe machining.

AC8015P	Development of crater damage is suppressed by controlling the orientation of the alumina crystal grains. Achieves long, stable tool life during high-speed and high feed cutting.
AC8020P	Alumina coating with even higher strength balances outstanding stability and wear resistance in mill-scale work on forged material. Gold-colored coating makes used corners easily identifiable.
AC8025P	The 1st recommendation grade for turning steel. Surface smoothing technology significantly suppresses adhesion of work material components. Achieves long, stable tool life with various cutting speeds and work materials.
AC8035P	Tensile stress removal of the coating layer greatly improves fracture resistance. Achieves long, stable tool life during heavy interrupted cutting.
AC1030U	Employs a new PVD coating and a dedicated tough carbide substrate. High-quality cutting edge grade suppresses adhesion and micro-chipping, realizing excellent machined surface quality.

Performance

AC8015P

Alumina crystal grain orientation control technology suppresses crater damage due to chip abrasion.

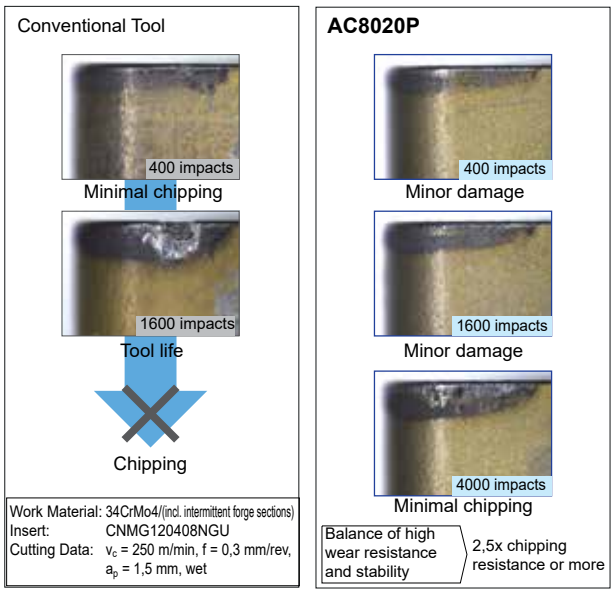

Work Material: 100Cr6 /(external contiuous)
Insert: CNMG120408NGU
Cutting Data: v_c = 300 m/min, f = 0,3 mm/rev, a_p = 1,5 mm, wet

Suppresses crater damage due to chip abrasion → Twice the crater wear resistance

AC8020P

Alumina coating with even higher strength suppresses chipping.

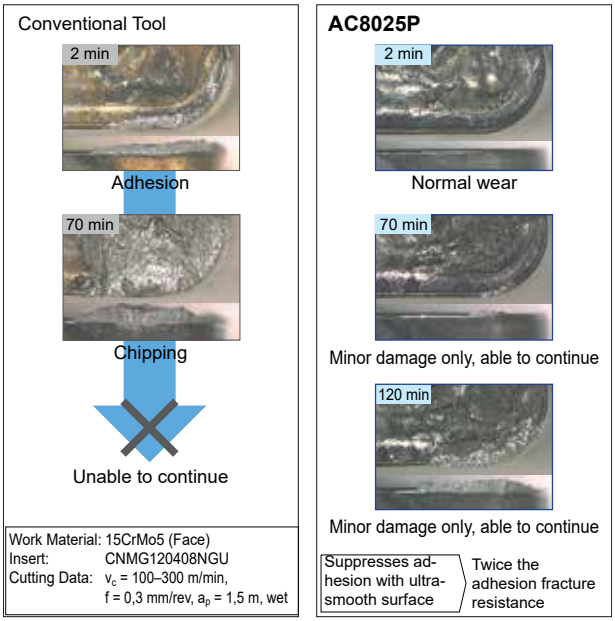

Work Material: 34CrMo4/(incl. intermittent forge sections)
Insert: CNMG120408NGU
Cutting Data: v_c = 250 m/min, f = 0,3 mm/rev, a_p = 1,5 mm, wet

Balance of high wear resistance and stability → 2,5x chipping resistance or more

AC8025P

Surface smoothing treatment significantly suppresses adhesion and chipping.

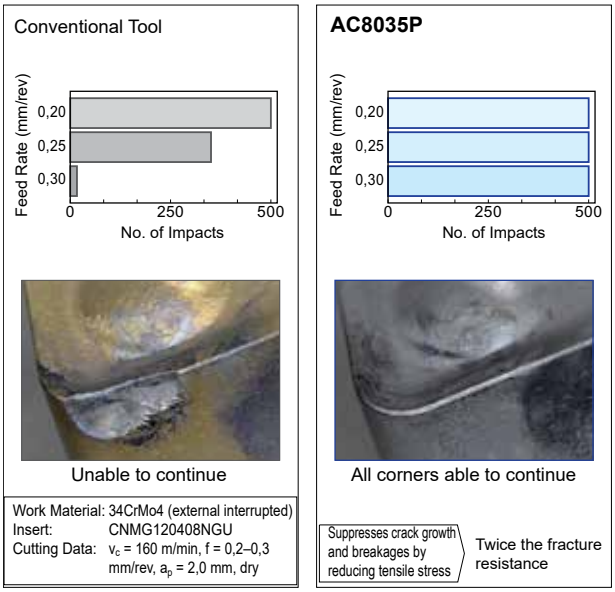

Work Material: 15CrMo5 (Face)
Insert: CNMG120408NGU
Cutting Data: v_c = 100–300 m/min, f = 0,3 mm/rev, a_p = 1,5 m, wet

Suppresses adhesion with ultra-smooth surface → Twice the adhesion fracture resistance

AC8035P

Special surface treatment reduces tensile stress in the coating layer, significantly suppressing breakages.

Work Material: 34CrMo4 (external interrupted)
Insert: CNMG120408NGU
Cutting Data: v_c = 160 m/min, f = 0,2–0,3 mm/rev, a_p = 2,0 mm, dry

Suppresses crack growth and breakages by reducing tensile stress → Twice the fracture resistance

AC6020M / AC6030M / AC6040M / AC1030U

AC6020M Employes "Absotech Platinum", a new CVD coating. The first recommended grade for continuous stainless steel machining that achieves a good balance between wear resistance and fracture resistance by combining a hardened substrate with excellent wear resistance.

AC6030M Employes "Absotech Platinum", a new CVD coating. The first recommended grade for general machining of stainless steel that drastically reduces the occurrence of abnormal damage, which is a problem in stainless steel machining. Achieves long and stable machining thanks to the improved coating strength and excellent adhesion.

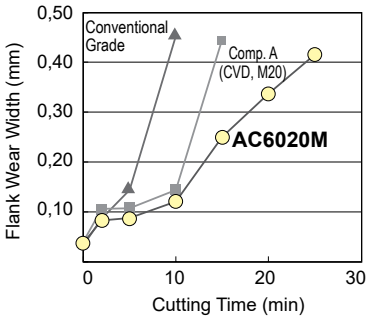

AC6040M Employes "Absotech Bronze", a new PVD coating and exclusive tough carbide substrate. The first recommended grade for interrupted machining of stainless steel that drastically improves the reliability in unstable machining thanks to the excellent adhesion and peel-off resistance of the new PVD coating as well as the improved fracture resistance of the exclusive carbide substrate.

AC1030U Employes "Absotech Bronze", a new PVD coating with a special tough carbide substrate. Achieving excellent machined surface quality with a high-quality cutting edge that reduces adhesion and micro-chipping.

Grades

BNC2115 / BNC2125 / BN1000 / BN2000

BNC2115 High-precision grade realizing long tool life with excellent surface roughness and stable machining. Maintains excellent surface roughness thanks to a high notch-wear resistant coating and tough CBN substrate.

BNC2125 1st recommendation grade, balancing excellent wear resistance and fracture resistance in hardened steel machining. Along with a tough CBN substrate, the coating combines wear resistance and toughness to achieve long, stable tool life even in high-efficiency and interrupted machining.

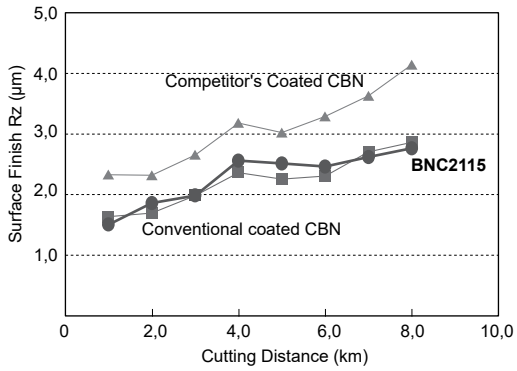

BN1000 For high speed machining. BN1000 provides the highest wear resistance of all uncoated SUMIBORON grades. Features improved fracture resistance while still placing a priority on wear resistance.

BN2000 General purpose grade suitable for typical hardened steel machining applications. Provides a high degree of fracture and wear resistance.

Cermet

Various grades and expanded lineup of catalogue items meet a wide range of finishing needs.

Lineup includes wear-resistant T1000A, general purpose T1500A, general purpose coated cermet T1500Z and tough T2500A.
Significantly expanded lineup of catalogue items for a wide variety of finishing applications.

Characteristics

Uncoated Cermet

T1000A High Speed Finishing Grade

High speed finishing grade with excellent wear resistance.
Improved wear and fracture resistance.
Solid solution hard phase reduces reaction with steel.
Perfect for high-speed continuous finishing of steel, cast iron and powdered metal.

Coated Cermet

T1500Z New General Purpose Grade

General purpose coated cermet grade that employs new Brillant Coat* PVD coating with excellent lubricity.
Excellent wear resistance provides long tool life.
Reduces adhesion of work material for beautiful finished surfaces.

Uncoated Cermet

T1500A

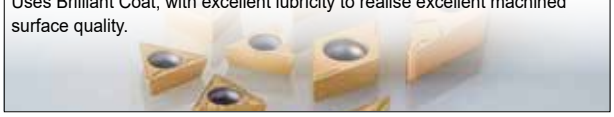

A general purpose grade that provides both wear and fracture resistance with higher-quality surface finish.
Mixing hard phases of different functionality, grain size and composition improves balance of wear and fracture resistance.
Improved cutting edge treatment technology provides beautiful finished machined surfaces.

Coated Cermet

T2500Z

Tough grade with excellent fracture resistance and thermal crack resistance.
Fine, uniform grain structure greatly improves toughness
Improves thermal crack resistance due to the high thermal conductivity and realises long stable tool life.
Uses Brilliant Coat, with excellent lubricity to realise excellent machined surface quality.

WC (Tungsten Carbide)
„Igetalloy“

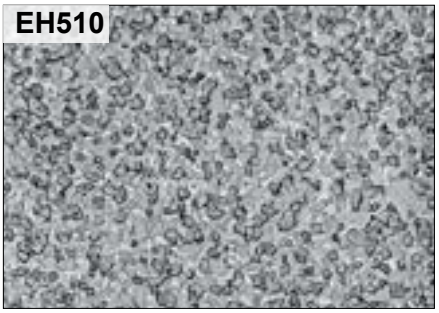

Igetalloy carbides have a solid history and a big variety of grades to suit many different applications. They are widely used and appreciated for their superior performance.

The Igetalloy line-up consists of carbide cutting tools that are available in a variety of different structures and compositions, each differing in terms of WC grain size and containing varying amounts of CO binder and TiC, TaC, and other double carbide components. The wide selection enables excellent wear resistance and toughness with a variety of work materials and cutting conditions.

SUMIBORON

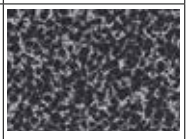

High hardness and heat resistance for cutting high hardness steel and hard cast iron. Long tool life with high-speed finishing of grey cast iron.

In 1977, Sumitomo Electric Hardmetal successfully developed a revolutionary CBN sintered tool - SUMIBORON. The main component in SUMIBORON is Cubic Boron Nitride with a special ceramic binder sintered under super high pressure and temperature. As compared to other conventional tool materials, CBN has higher hardness and excellent heat resistance.

With these distinct characteristics, SUMIBORON can perform machining of hardened steel, high hardness cast iron and exotic metals where previously only grinding was done. Furthermore, excellent efficiency and longer tool life can also be achieved from high speed machining of cast irons.

SUMIDIA

Excellent wear resistance, longer tool life, and high-speed, high-efficiency, high-precision cutting of non-ferrous metals and non-metals.

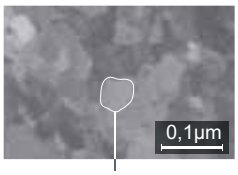

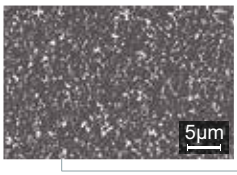

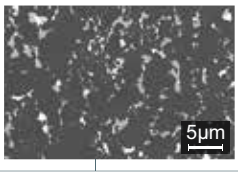

SUMIDIA is a polycrystalline diamond material made from sintered diamond powder that was first created using our proprietary technology in 1978.
SUMIDIA's superior wear resistance achieves longer tool life, high speed, high efficiency and high precision in non-metal cutting and non-ferrous metal applications including aluminium, copper, magnesium and zinc alloys.

SUMIDIA Binderless uses nano-polycrystalline diamond for the cutting edge, demonstrating excellent wear resistance and fracture resistance.
In particular, it achieves extended tool life and machining accuracy superior to conventional polycrystalline diamond when machining hard brittle materials such as cemented carbides.

Features

Diamond particles on the order of sub-microns to several dozen microns, sintered at high density.

SUMIDIA Binderless

SUMIDIA Binderless Series uses nano-polycrystalline diamond for the cutting edge and demonstrates excellent wear and fracture resistance compared to conventional sintered diamond tools.
In particular, SUMIDIA Binderless Series allows for improvements in tool life and machining precision that go far beyond conventional diamond tools in the machining of hard brittle materials, such as carbide.

Excellent for High Precision Machining of Carbide

Nano-polycrystalline diamond with excellent wear resistance achieves high precision machining of carbide.

Maintains Superior Dimensional Tolerances Over Many Hours

Greatly reduces the number of tool replacemets compared to conventional diamond tools and increases work efficiency while reducing total costs.

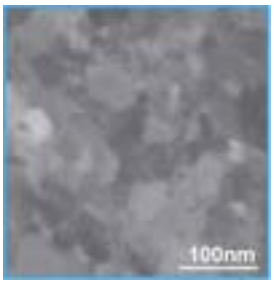

Suitable for Hard Brittle Material Machining

Hard brittle materials (such as ceramics) that could only be ground before can now be cut.

NGU-Chipbreaker for Positive Inserts

Excellent chip control performance

- Wide chip pocket for various cutting conditions

Less Vibration

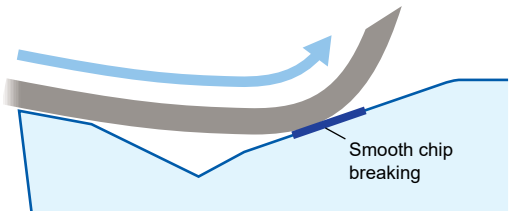

- Improved chip control in a wide application field

Suppresses chip jamming at high feed rates for ideal chip control

- Wide restraining face enables consistent chip control for light to medium cutting.

- Discharges chips well under high feed conditions and suppresses build-up

- Achieves stable machining with both versatility and low resistance

Negative M Class Chipbreakers for Low Carbon and General Steel Turning

General Features

The high performance NFE type, which ensures stable chip control in a wide range of feed rate, has been added to the chipbreaker series for low carbon steel and general steel turning.
Extensive product lines are available to meet various machining requirements.
A positive insert execution of chipbreaker NFB is also available.

Application Range

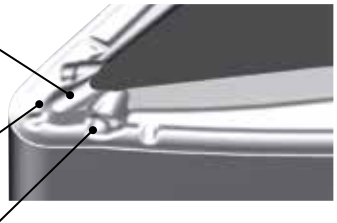

NFE Chipbreaker for Finishing

Supports general purpose machining to high speed machining.

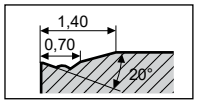

The arc-shaped main breaker ensures stable chip control in a wide feed rate range.

The two step chipbreakers enable stable chip control at a low feed rate of f = 0,1 mm/rev.

The sub-breaker controls cutting chips in profiling.

General Features

Enables medium roughing of hardened steel in combination with coating and grade AC503U.
Reduces heat generation and enables deep cutting (a_p = 1–3 mm) of hardened steel by using a wide neutral ground chipbreaker (rake angle: 4°) and sharp edge.
Discharges chips smoothly.

Chipbreaker
NEG Type / NEF Type

For Exotic Alloys and Stainless Steel Turning

■ General Features

NEG/NEF type chipbreaker for exotic alloy machining can be used for Titanium alloys, heat-resistant alloys and a variety of other exotic alloys.
They deliver excellent wear resistance and superior chip management. These chipbreakers can solve quality problems caused by the unstable tool life and poor chip control provided by conventional chipbreakers for exotic alloys.

■ Application Range

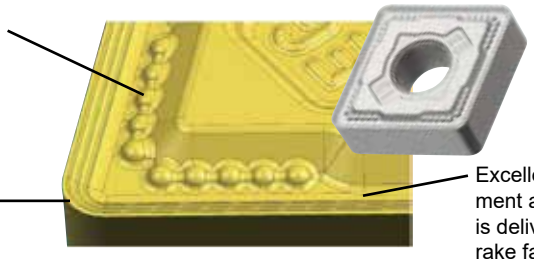

NEG Chipbreaker for Roughing

Provides excellent wear resistance and chip control from general-purpose machining to roughing applications. Reduces damage to insert and eliminates trouble from chips specific to exotic alloys. Also demonstrates very high versatility.

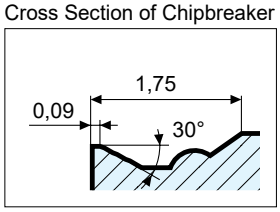

Crater wear advancement is prevented by the round bumps, whilst maintaining excellent control.

The cutting edge maintains the strength slowing the progress of crater wear.

Excellent chip management and wear prevention is delivered by the special rake face design.

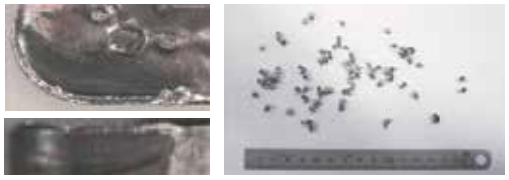

Cross Section of Chipbreaker

● Cutting Performance – NEG Type

Heat Resistant Alloy

Chipbreaker type: NEG (AC510U)

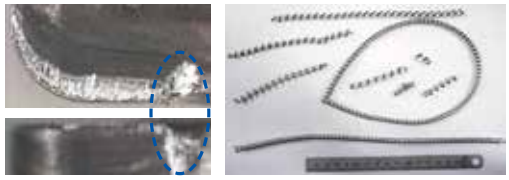

Suppresses the chipping of peripheral cutting edge and notch wear. Excellent chip management.

Work Material: Inconel 718

Insert: CNMG120412

Cutting Data:
v_c = 40 m/min
a_p = 2,5 mm
f = 0,2 mm/rev

T_c = 7 min

Conventional tool (S10)

Notch wear / poor chip control

Titanium Alloy

Chipbreaker type: NEG (AC510U)

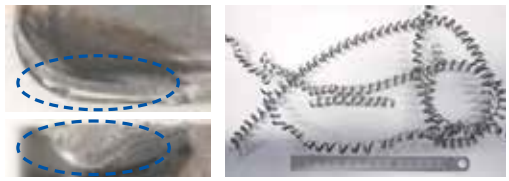

Suppresses crater wear and flank wear. Excellent chip management.

Work Material: Ti-6Al-4V

Insert: CNMG120412

Cutting Data:
v_c = 65 m/min
a_p = 2,5 mm
f = 0,2 mm/rev
wet
T_c = 8 min

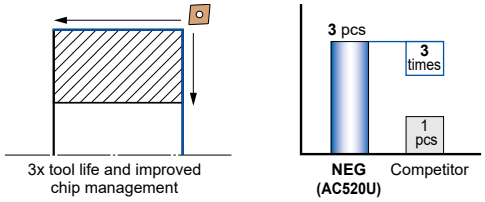

Conventional tool (S10)

Crater wear / flank wear / poor chip control

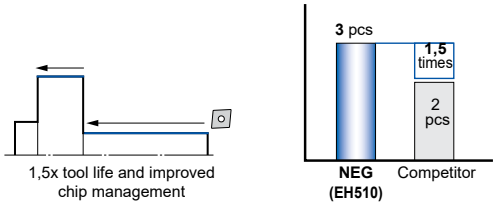

● Application Example – NEG Type

Inconel 718, machine component

Insert: CNMG120408 NEG (AC520U)
Cutting Data: v_c = 50 m/min, a_p = 1,5 mm, f = 0,3 mm/rev, wet

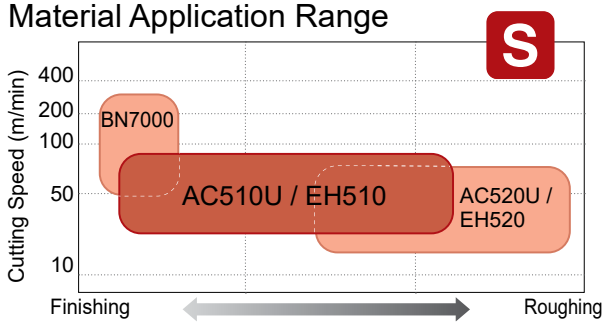

Pure Titanium (Ti grade 3), machine component

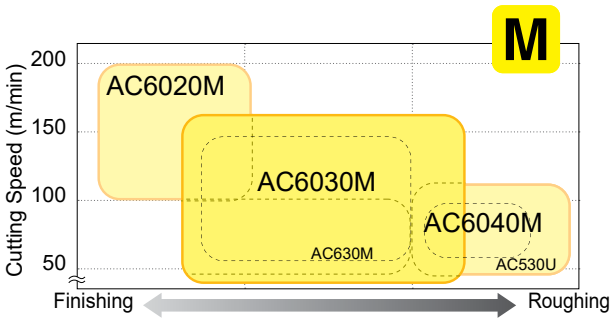

Insert: CNMG120408 NEG (EH510)
Cutting Data: v_c=80–100 m/min, a_p=1,0 mm, f=0,25 mm/rev, wet

Chipbreaker
NEG Type / NEF Type

■ Material Application Range

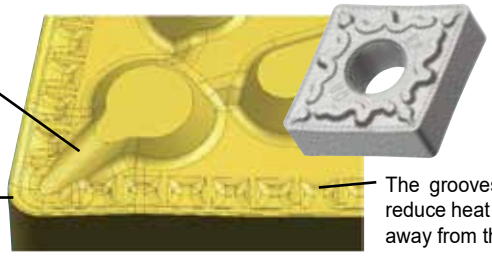

NEF Chipbreaker for Finishing

The NEF chipbreaker reduces chip curl diameter in finishing applications.
Provides extremely good chip management not fluctuated by the material in use.

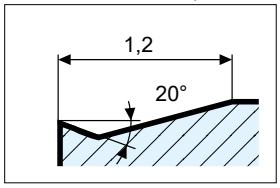

Main chipbreaker that enables good chip control even at low depths of cut.

Sharp edge with 20° rake angle reduces wear.

The grooves on the rake face reduce heat and assist chip flow away from the workpiece.

Cross Section of Chipbreaker

● Cutting Performance – NEF Type

Heat Resistant Alloy

Chipbreaker type: NEF (AC510U)

Improvements in chip control and chip removal management based on small curled chips.

Work Material:
Inconel 718

Insert:
CNMG120408

Cutting Data:
v_c = 55 m/min
a_p = 0,3 mm
f = 0,15 mm/rev
wet
T_c = 8 min

Conventional tool (S10)	Competitor's product (S10)
	

There is a problem in the length and the diameter of chips.

Titanium Alloy

Chipbreaker type: NEF (AC510U)

Improvements in chip control and chip removal management based on small curled chips.

Work Material:
Ti-6Al-4V

Insert:
CNMG120408

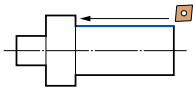

Cutting Data:
v_c = 80 m/min
a_p = 0,5 mm
f = 0,2 mm/rev
wet
T_c = 25 min

Conventional tool (S10)	Competitor's product (S10)
	

There is a problem in the length and the diameter of chips.

● Application Example – NEF Type

Inconel 718, shaft component

Great improvement in chip management. Keeps workpieces free of damage. It is possible to omit final polishing process.

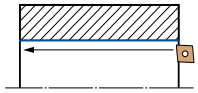

NEF (AC510U)

Conventional tool

Insert: CNMG120408 NEF (AC510U)
Cutting Data: v_c= 45 m/min, a_p= 0,25 mm, f = 0,1 mm/rev, wet

Duplex stainless steel cover

Improvements in chip management. Suppress damage to finished surface with no entanglement of chips.

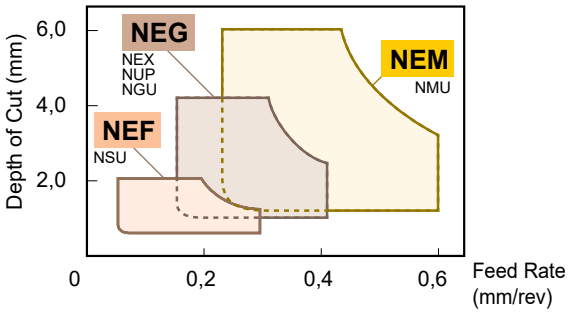

NEF (AC510U)

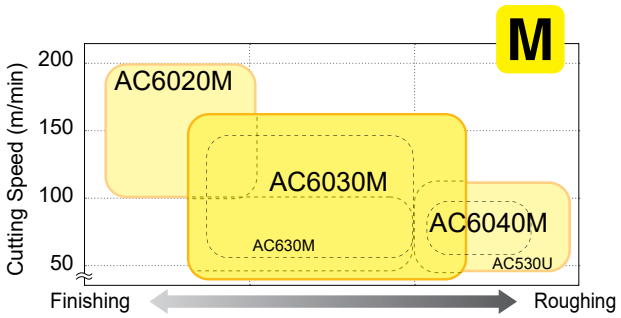

Conventional tool

Insert: CNMG120408 NEF (AC510U)
Cutting Data: v_c= 55 m/min, a_p = 0,3 mm, f = 0,125 mm/rev, wet

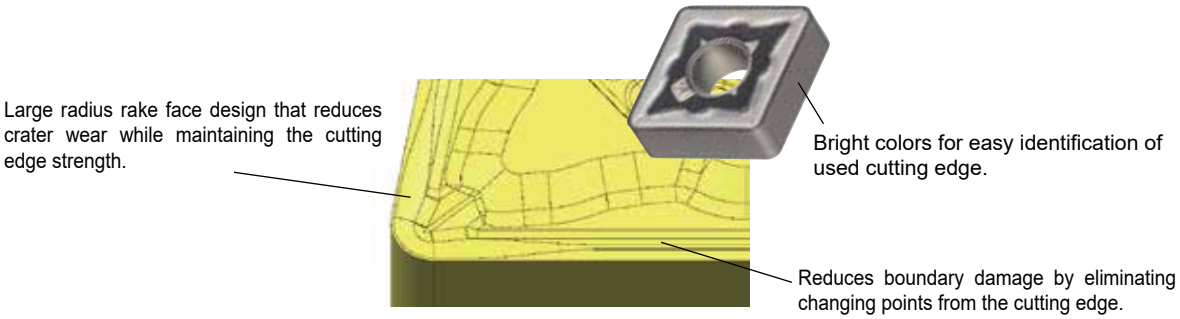

Application Range

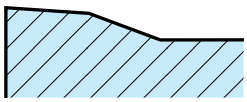

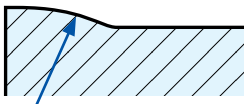

NEM Chipbreaker for Rough Cutting

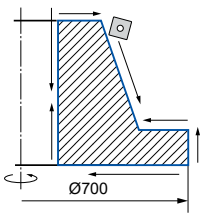

The NEM chipbreaker achieves excellent fracture and crater resistance and ensures extremely stable machining.

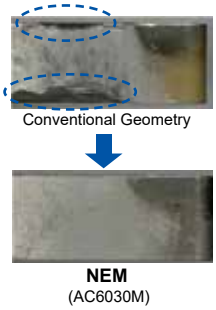

Reduction of Damage

	Reduction of Boundary Damage		Reduction of Crater Wear	
	Cutting Edge	Boundary Wear Comparison	Cross Section	Crater Wear Comparison
Conventional Geometry				
NEM Type				
	The NEM chipbreaker has no changing points on the cutting edge, so boundary damage is reduced.		The NEM chipbreaker smoothly evacuates chips thanks to its large radius rake face design, so crater wear is reduced.	

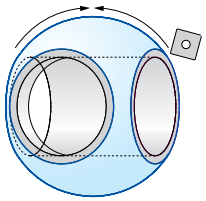

Application Example

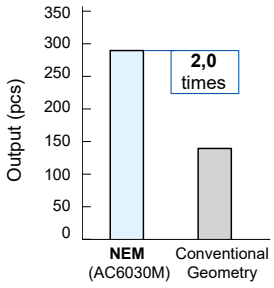

Reduces breakage out of the cutting edge and ensures stable machining.

Work Material:	X5CrMo17 12 2
Insert:	SNMG190616NEM (AC6030M)
Cutting Conditions:	v_c = 70 m/min, f = 0,5 mm/rev, a_p = 3,0–8,0 mm, wet

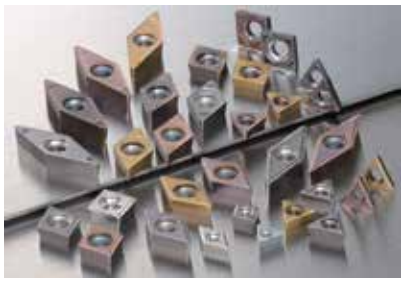

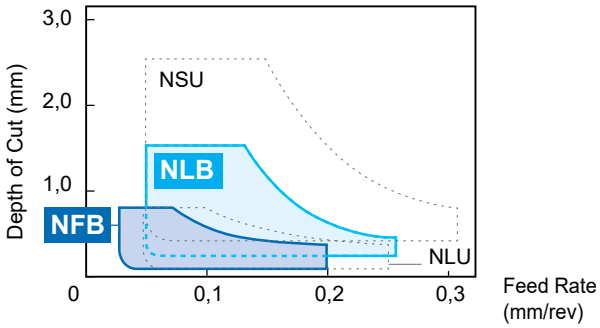

Reduces crater wear and provides long tool life.

Work Material:	X5CrNiS18 10
Insert:	SNMG120408NEM (AC6030M)
Cutting Conditions:	v_c =100 m/min, f = 0,32 mm/rev, a_p = 2,0–2,5 mm, wet

(Note) The cutting point position of the SDW type does not follow the ISO standard.
Wenn using on a boring holder with a 93° approach angle, there is a need to revise the cutting point position (refer to right table) relative to using standard inserts.

(Note) The cutting point position of the SDW type does not follow the ISO standard.
Wenn using on a boring holder with a 93° approach angle, there is a need to revise the cutting point position (refer to right table) relative to using standard inserts.

SumiTurn T-REX

● T-REX clamping for maximum rigidity 50 % more cutting edges than a DNMG Insert

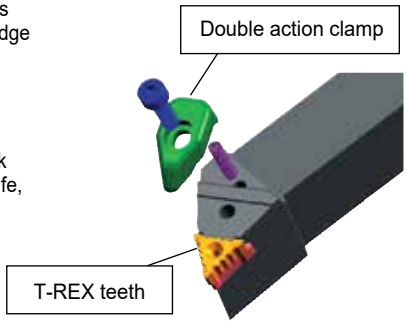

■ Advantages

● T-REX Inserts for Maximum Economy

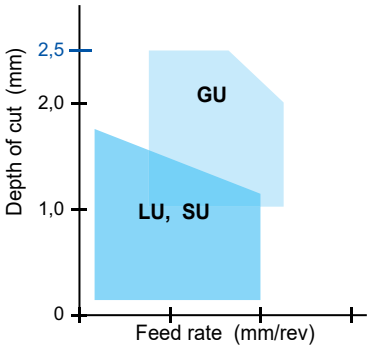

With 6 cutting edges and a 55 degree included angle - T-Rex is the intelligent alternative to profile turning with a traditional 4 edge DNMG insert.

● Biting Performance from T-REX Teeth

The double clamp tool holder and powerful teeth of T-REX lock the insert to eliminate movement, dramatically improving tool life, machining accuracy, and cutting edge security.

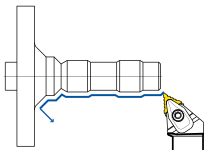

● Application Range

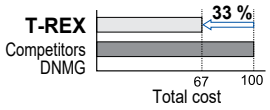

■ Application Examples

● 20Cr4 Shaft

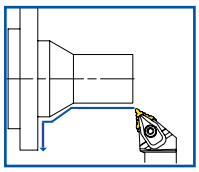

33 % cost saving

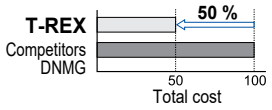

Insert: TRM551708-GU, AC2000
Cutting data: v_c= 150 m/min, f = 0,25 mm/rev, a_p < 2,0 mm, wet

● 25CrMo4 Gear

1,3 times long tool life

Insert: TRM551708-LU, AC900G
Cutting data: v_c= 220 m/min, f = 0,2–0,3 mm/rev, a_p < 1,0 mm, wet

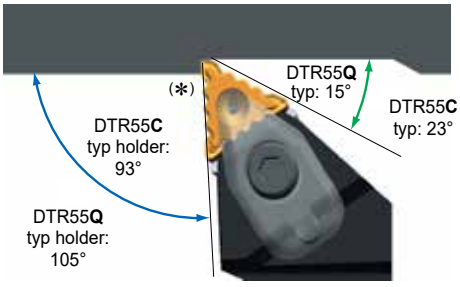

■ Recommendations

● Depth of Cut

Max. a_p = 2,5 mm

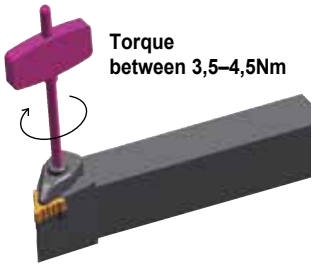

● Approach Angle

(*) Angle of major cutting edge

C-Type: 95,5°
Q-Type: 107,5°

Application P Steel
M Stainless steel

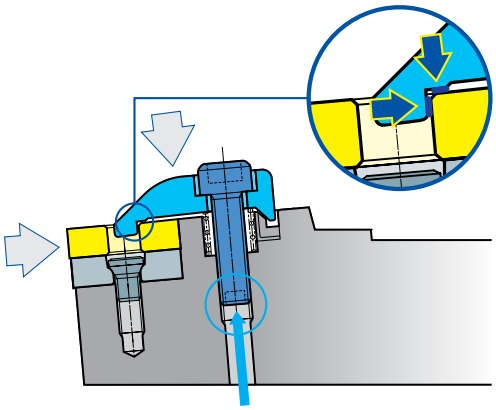

Characteristics

Insert is clamping firmly for improved fracture resistance.
High indexing accuracy improves machining accuracy.
Insert can be changed from below the holder.
Suitable for high efficiency machining and interrupted cutting in hardened steel.

Clamp Mechanism

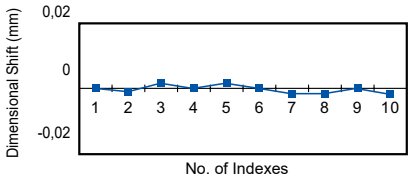

Secured in two directions and supported by two faces.

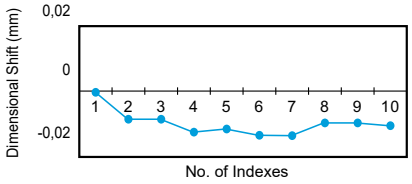

Insert can be changed from below the holder.

In 1984, Sumitomo Electric Hardmetal first released the Mini Tool Holder series for the machining of small components in small NC autolathes.
A full range of insert grades comprising of the Cermet T1500A, SUMIBORON BN2000, SUMIDIA DA1000 and especially AC530U, was also introduced to meet a variety of machining requirements.

Polygon - Shank Holder

Features

The Sumitomo polygon shank holders enable an extremely high stiffness connection between machine and tool. The conical polygon can take high bending and torque moments based on the combination of the face contact to the spindle.
This self-guiding coupling system offers high precision and a repeatability of ± 2 µm in X, Y and Z axis.
While using this easy and quick coupling system it is possible to gain higher machine utilization time as the set-up and tool change times are reduced.
The compact design and the high stiffness connection to the spindle offer a versatile use e.g. on multi-task machines, machining centers and turning-milling centers.

Characteristics

- original SUMITOMO D-type double clamping system
- compact design
- monoblock system - no additional interfaces
- precise positioning; self-guiding with high repeatability
- high stiffness supported by face contact of holder
- carbide shims to prevent holders from damage
- simple tool holder change and low-maintenance operation
- internal coolant supply directly to the cutting edge
- Polygon shank and insert seat hardened for long holder life

Polygon - shank holder - produced according to ISO 26623-1

Boring Tool Series

General Features

Since being the first in 1976 to introduce indexable boring bars, Sumitomo Electric has been continuously developing a comprehensive range which includes the SEC-Small Hole boring bar series, high rigidity boring head series, with either steel / carbide shanks, and the latest anti-vibration mechanism - SumiTurn X-Bar series coupled with a wide variety of insert grades and chipbreakers, cover a whole range of process requirements.

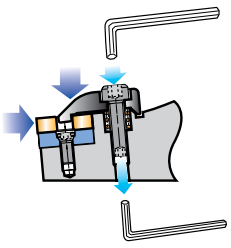

Features

- Wide selection for various boring operations
- Minimum bore diameter from ø 5,5 mm onwards
- New anti-vibration boring bars, SumiTurn X-Bar.
- High rigidity head-design for small boring bars
- Wide selection of grades and chipbreakers available for various processes and work materials

Series SumiTurn X Bar

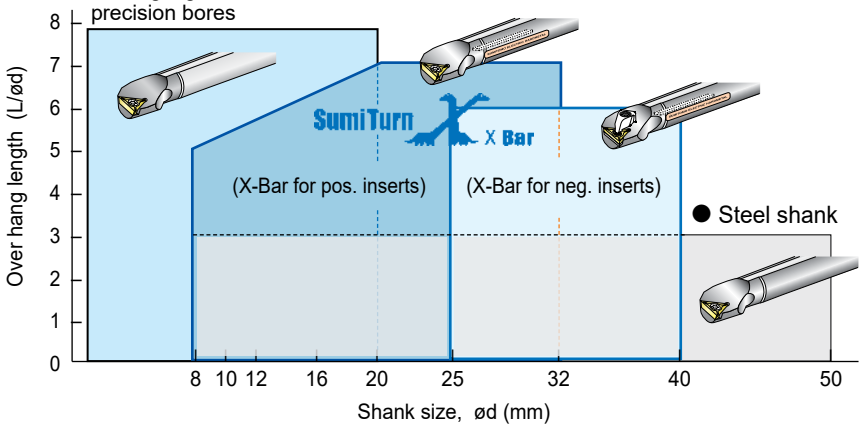

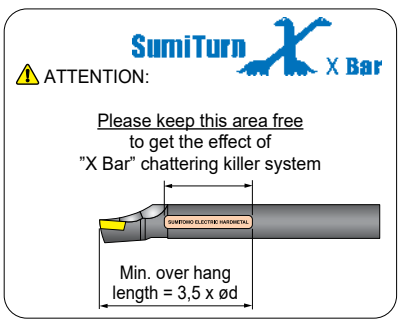

- New negative type "X Bar" with high performance double clamping system

Application Guide

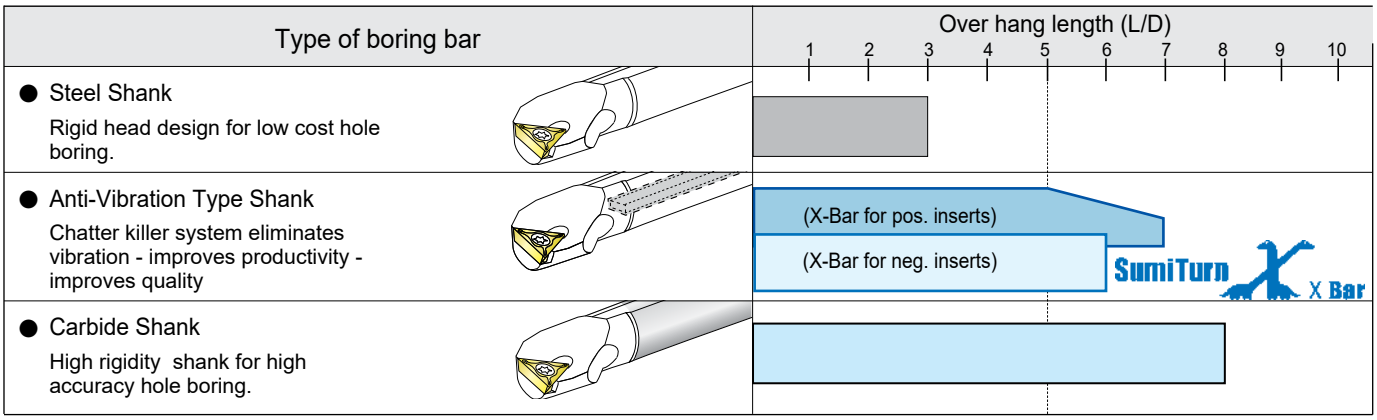

- Carbide shank
  Rigid shank for long high precision bores
- Anti-Vibration Steel Shank
  Low cost solution for long precision bores - eliminates chatter - improves productivity and surface finish

Advantages

● T-REX Inserts for Maximum Economy

With 6 cutting edges and a 55 degree included angle - T-Rex is the intelligent alternative to profile turning with a traditional 4 edge DNMG insert.

■ Characteristics

SumiSmall

- Economical, two-cornered insert.
- Maximum boring depth 5D (5 times the shank diameter)
- Usable at any desired overhang.
- Shank size = min. bore diameter for easy selection. (Available from ø 2 mm to ø 5 mm in 0,5 mm increments.)
- KBMX Type cutting edge used, no breaker versions also available in stock.

Small Hole Finishing

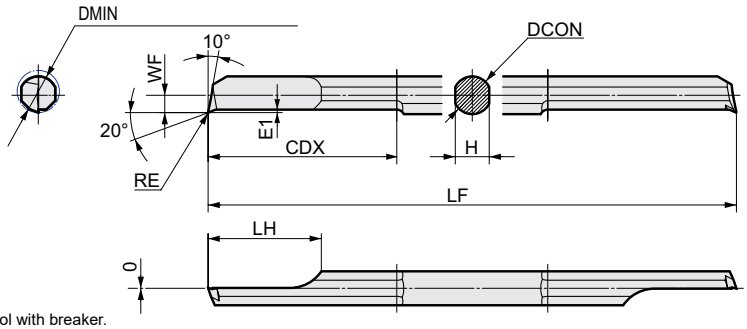

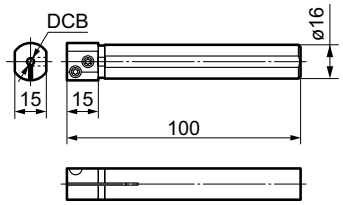

Figure shows tool with breaker.

GND Series

New

New series of internal coolant-type holders for small lathes

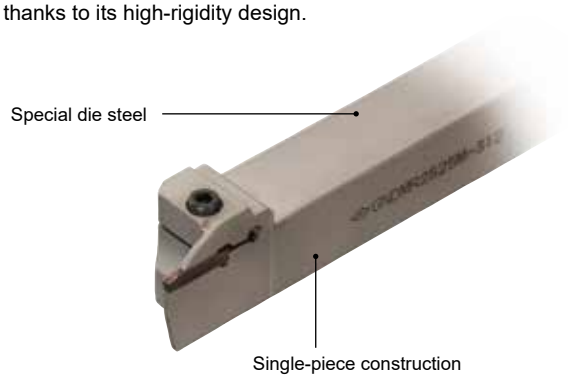

Characteristics

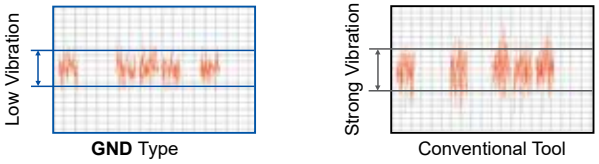

- Wide range of application processes
  Applicable for grooving, turning, copying, facing, boring and cut-off.
- Achieving stable tool life
  An array of chipbreakers improves the efficiency in chip control in various applications and prevents unexpected damages caused by chip blockade.
- Achieving smooth cutting and high efficiency machining
  Holders utilizing one-piece body construction made of special steel, reduce vibration by 30 % during machining as compared to conventional types.
- Achieving high precision grooving widths with moulded inserts
  Grooving insert width tolerance of ±0,03 mm over the entire range

Cutting Performance

Eliminates Vibration

Reduces vibration up to 30 % compared to conventional grades thanks to its high-rigidity design.

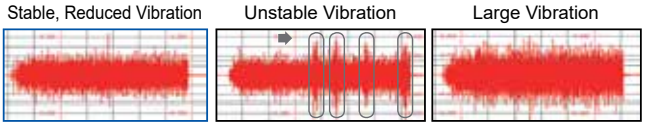

GND Type — Conventional Tool

Work Material:	15CrMo5
Holder:	GNDL R2525M 220
Insert:	GCM N2002 GG
Cutting Conditions:	v_c = 100 m/min, f = 0,10 mm/rev, a_p = 20 mm, wet

Ensures both, high rigidity and good chip evacuation

Internal

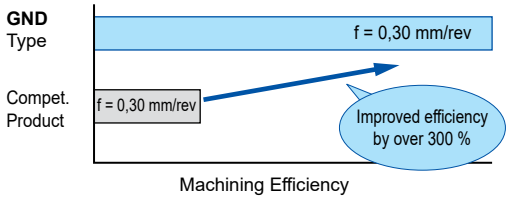

GND Type — Comp. A — Comp. B

Work Material:	15CrMo5
Holder:	GNDI R2532 T306
Insert:	GCM N3002 GG
Cutting Conditions:	v_c = 100 m/min, f = 0,05 mm/rev, a_p = 3,0 mm, wet

Application Examples

Substantially improved machining efficiency!

High rigidity holder enables high load machining at high feed rate.

Work Material:	42CrMo4
Holder:	GNDL R2525M 320
Insert:	GCM N3002 GG (AC530U)
Cutting Conditions:	v_c = 130 m/min, f = 0,30 mm/rev, wet

Stable and long tool life ensures reliable functionality even on automatic production lines!

Reduction of chattering prevents unexpected breakage.

GND Type — Competitor

Work Material:	C53
Holder:	GNDM L2525M 618
Insert:	GCM N6030 RG (AC530U)
Cutting Conditions:	v_c = 130 m/min, f = 0,30 mm/rev, wet

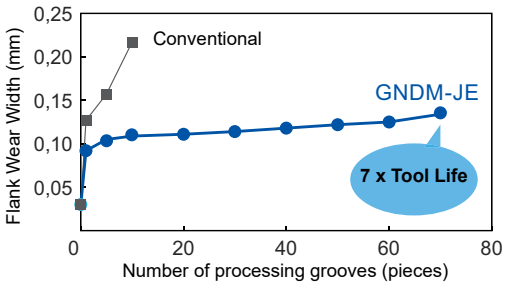

Internal Coolant Grooving Tool Holder GNDM-J(E) / GNDL-J(E) Type and Grade-Expansion

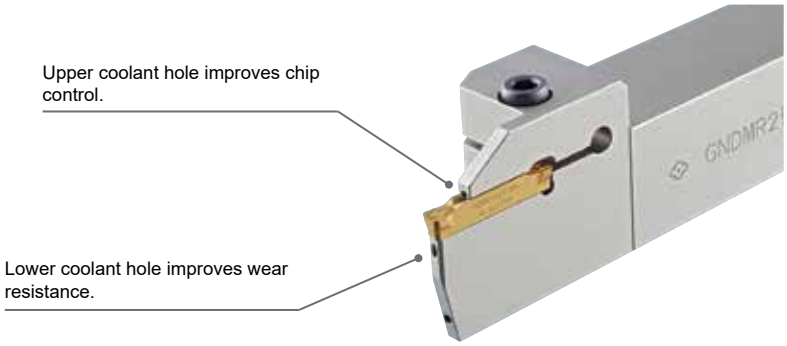

New Expansion

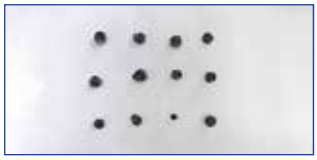

- Newly developed 2-hole coolant design optimizes cooling of the insert and improves chip removal, extending tool life and allowing for improved speeds and feeds in production.
- Grooving width range from 2,0 to 6,0 mm
- Introducing new holders for small lathes with grooving width of 2,0 to 3,0 mm
- Achieves both high efficiency in high speed machining and extension of tool life due to internal coolant supply to the cutting edge.
- Improves chip control by applying direct coolant from cutting edge side.
- 4 more grades **AC8025P, AC8035P, AC5015S and AC5025S** available.
- The new grades expand the application in steel materials in direction of high speed with the grade **AC8025P** and for more toughness with the grade **AC8035P**.
- In the area for machining heat-resistance alloys and exotic alloys as Inconel and Hastelloy, we recommend the grade **AC5025S** as the first choice and the grade **AC5015S** for high-speed machining in continues cut.

External Coolant

Work Material:	Ti-6Al-4V
Holder:	GNDM R2525K 312JE
Insert:	GCM N3002 GG (AC530U)
Cutting Conditions:	v_c = 60 m/min, f = 0,1 mm/rev, a_p = 5,0 mm, wet

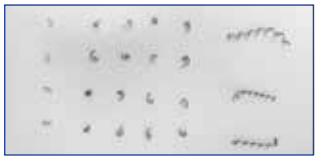

CF Type Chipbreaker for Cut-Off

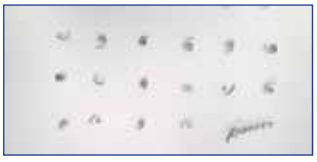

- Lead angle of 10°/15° for improved sharpness in cut-off machining.
- Asymmetrical chipbreaker design provides excellent chip control even in difficult to machine conditions.

The recommended cutting conditions for necking are the same as grooving with RN type chipbreaker and edge width.
To prevent interference with the work material, do not use the holder for less than the minimum cutting diameter (DMIN) as specified for GNGN type holders.

Key Points for Face Machining

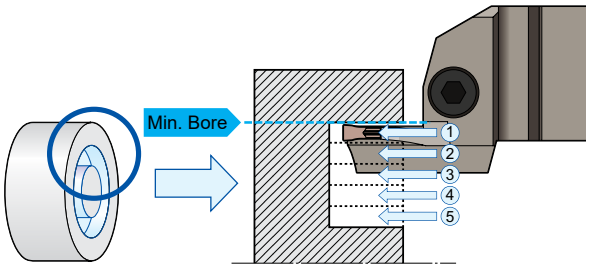

Holder Selection

Select a holder so that the outer diameter of the first groove to be machined comes within the range of maximum and minimum grooving diameter of the holder.

Precautions for Groove Expansion

Recommended Chipbreaker: **MG, ML, GG, GL, GF**

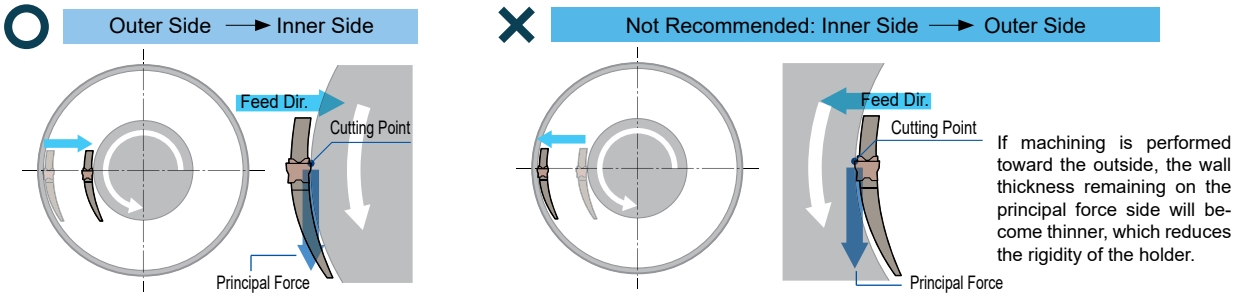

If the first groove meets the range of the effective grooving diameter during groove expansion, the grooving diameter will not be limited for the second and later passes.

Precautions for Turning

Recommended Chipbreaker: **MG, ML**

Considering the rigidity of the holder, we recommend machining from the outside to the inside.

If machining is performed toward the outside, the wall thickness remaining on the principal force side will become thinner, which reduces the rigidity of the holder.

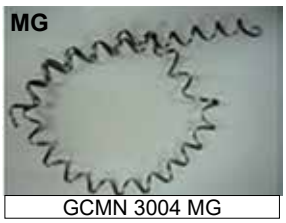

- If the first groove meets the range of the effective grooving diameter in face turning, the grooving diameter will not be limited for the second and later passes.
- Select the chipbreaker of the lower limit side of the recommended cutting conditions and straight chips before evacuation. (In face grooving, broken chips easily get stuck in grooves, which causes problems.)
- When breaking chips, step feed is required.

Key Points for Internal Machining

Precautions for Internal Machining

Recommended Chipbreaker: **ML, GL**

If the prepared hole diameter is small, use an ML or GL low-feed chipbreaker, each of which reduces chip curl diameter, to ensure adequate chip evacuation.

Precautions for Grooving Tool Holders GND Series

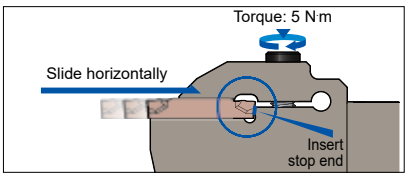

■ Notes on how to Attach Inserts

① Remove any foreign particles or oil from the insert seat before attaching the insert.
② Ensure the seat location is clean and free of damage.
③ Slide the insert level over its seat.
④ Push the insert with its opposite end (the holder side) firmly against the insert stop end.
⑤ The recommended tightening torque is 5 N·m. Tightening above the recommended torque may damage the insert or the holder which could cause injury and other accidents.

③ Attach insert on the seat flat.

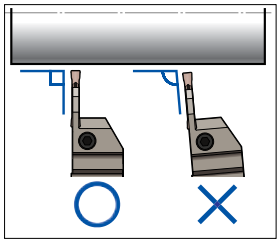

④ Push insert fully into place.

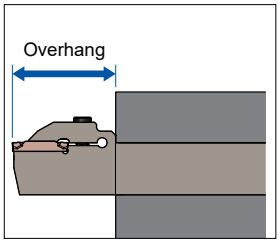

■ Notes on how to Apply Holders

① Remove any foreign particles or oil from the tool post before attaching the holder.
② Ensure the seat location is clean and free of damage.
③ Attach the holder so that the insert is perpendicular to the workpiece.
④ Set holder with shortest possible overhang.
⑤ When grooving or turning, adjust the center height of the cutting edge to as close ±0 mm as possible. (Within ±0,1 mm is recommended)
⑥ Incorrect center height adjustment may cause chattering. (In cut-off applications, adjust the center height of the cutting edge to a value from 0,0 to +0,2 mm). A lower center height will result in larger nip at the center.

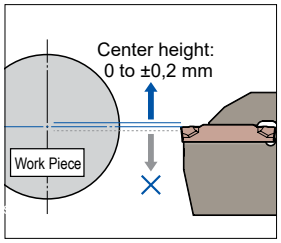

③ Attach at right angle to work-piece.

④ Set with short over-hang

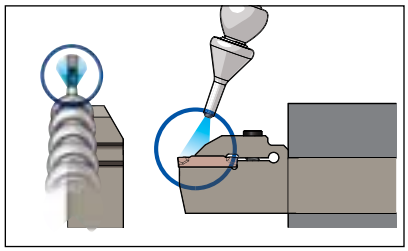

⑥ Center height ad-justment in cut-off applications

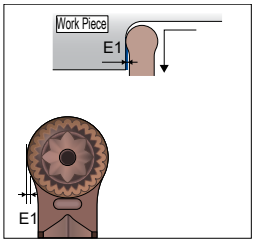

■ Notes on Setting Coolant Supply Nozzle

Set the coolant supply nozzle so that coolant can be supplied from the top of the upper clamp unit.

Key Points for Connecting Hoses and Connectors

■ Connecting Hoses and Connectors

Apply sealant such as commercial sealing tape to the piping connection parts.
GNDM-JE type holders have a plug (XP02-E) mounted on the holder back end at shipping. (see fig.1)
When piping from the holder back end, mount a grub screw (BT0505-E) on the bottom of the holder for use. (see fig. 2)

Fig. 1 Piping from bottom

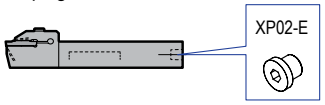

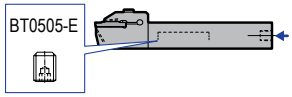

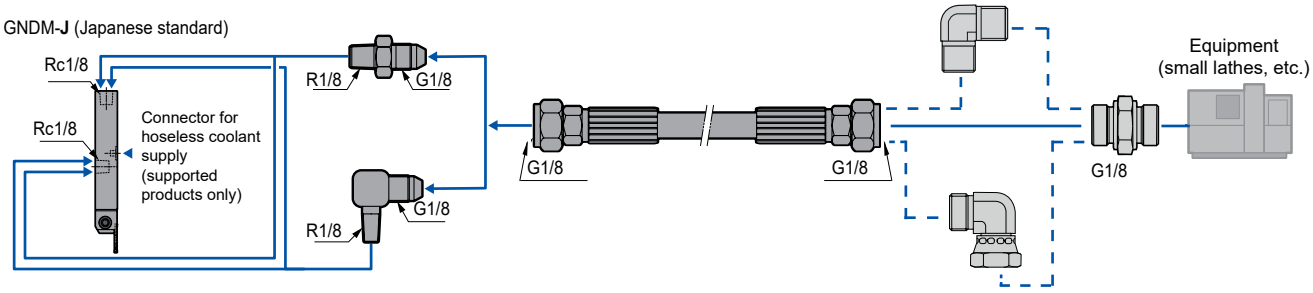

Fig. 2 Piping from back end

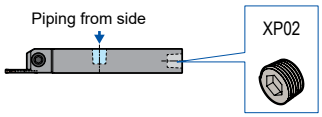

■ Connecting Hoses and Connectors (for Small Lathes)

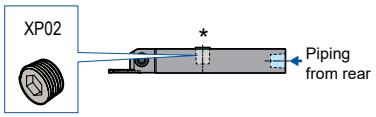

Apply sealant such as commercial sealing tape to the piping connection parts.
Refer to the figur below for mounting the plug during piping.

Piping from side (when shipped)

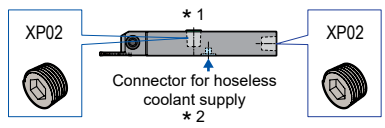

Piping from rear

* The plug will protrude a few millimeters when mounted to the side.

Hoseless coolant support products (when shipped)

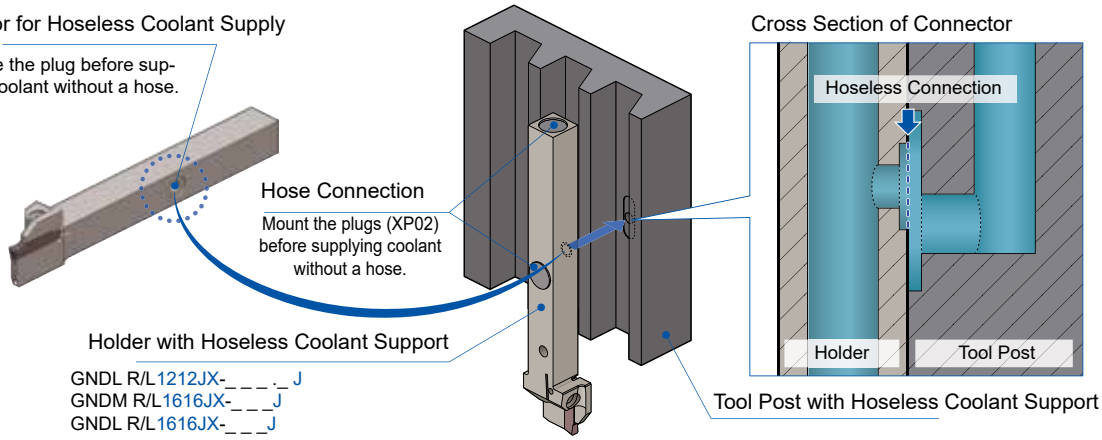

* 1 The plug will protrude a few millimeters when mounted to the side.
* 2 A plug is attached when shipped. Remove this plug before supplying coolant without a hose.

Holder with Hoseless Coolant Support

Direct coolant supply from the tool post is possible without a hose

Features

Tough carbide body for stable machining.
Internal coolant supply for outstanding chip evacuation.
Adopts AC1030U for excellent machined surface quality.
In addition to grooving applications, we have a lineup of 12 items for circlip groove machining.

Application Range

Width of Cut:	0,74 mm – 3,00 mm
Min. Bore Diameter:	Ø 8,0 mm
Max. Groove Depth:	to 4,0 mm
Holder:	Carbide body (internal coolant supply)
Insert:	Grade AC1030U

Chip Control

SSH Series

Stable and smooth evacuation of curled chips even on small diameters.

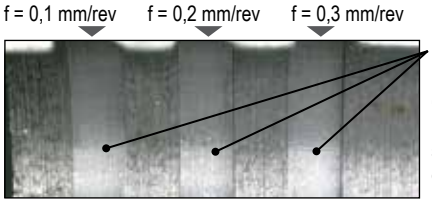

Competitor

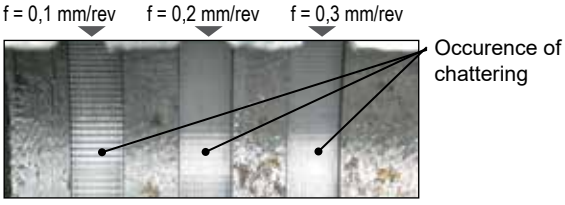

Evacuation from grooves is poor, inviting sudden breakage.

Work Material:	C45	Cutting Conditions:	v_c = 50 m/min, f = 0,02 mm/rev, a_p = 1,0 mm, wet (oil-based)
Cutting Diameter:	Ø 13 mm		

Chatter Resistance

GND Grooving System

General Features

New grades and chipbreakers have been added to the already established GND grooving system with polygon shank and a flexible and economical cassette system for inserts. An array of chipbreakers improves the efficiency in chip control in various applications such as grooving, turning, profiling and cut-off.

Advantages

- GND inserts for soft grooving from 2,0 - 6,0 mm width
- Expanded grade selection with 9 different chipbreakers for a wide application range
- Provides excellent chip control
- Achieves stable long tool life

TGA-BF Type

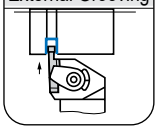

Characteristics

- Outstanding chip control when grooving
- Excellent chip control when finishing wide grooves using axial feed
- Grooving inserts from 1,5–4,5 mm wide
- Grade AC530U with Super ZX ultra hard coating for steels, stainless steels and cast iron increases productivity and extends tool life

■ Notes for Machining an Insert

Make the cutting edge so that the rake angle, back taper, etc. as shown in fig. 3. When you have installed an insert into a holder, it becomes a cutting blade element as shown in fig. 4.

Characteristics

- Holders available in carbide (SumiGrip) and steel (SumiGrip JR).
- Capable on interrupted machining.
- Can be used for cut-off, grooving and chamfering applications.

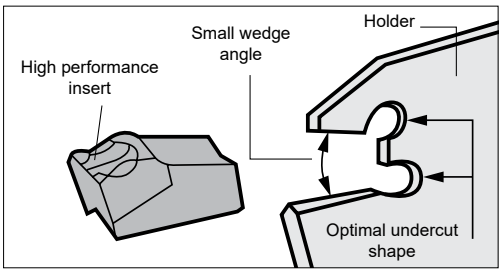

Type

- Tool block type
  STFH (steel) / WCFH (carbide)
- Shank type
  STFS (steel) / WCFS (carbide)

Features of Design

Twice the Insert Holding Force

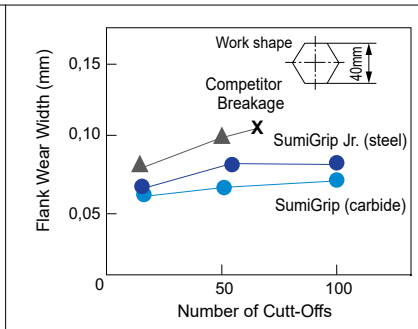

Low Vibration

Work Material: C45 (Ø 50 mm, 250 HB)
Insert: 3 mm width, coated carbide
Cutting Conditions: v_c = 80 m/min, dry

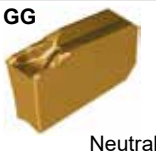

Wear Resistance

Work Material: C45 (hexagonal)
Insert: 3 mm width, coated carbide
Cutting Conditions: v_c = 150 m/min, f = 0,15 mm/rev, wet (water soluble)

GG Type/GF Type/CF Type Chipbreaker, Grade AC1030U

Utilizing grooving tool GND type chipbreaker series for excellent chip control.
Low cutting force chipbreaker GF type (neutral) or CF type (left or right handed) inserts, coupled with a carbide blade, enables stable machining and prevents chattering even when machining stainless steel.
Achieving stable and longer tool life with the new AC1030U grade.

SSTE / SSTI Type

New

Features

- High-precision inserts with/without wiper flat for threading, supporting a wide range of applications from general industrial machinery to pipes and aerospace devices
- Stable chip control through use of a 3D molded chipbreaker.
- Ground cutting edge flank for improved cutting edge sharpness, resulting in high quality threads

SSTE / SSTI Type

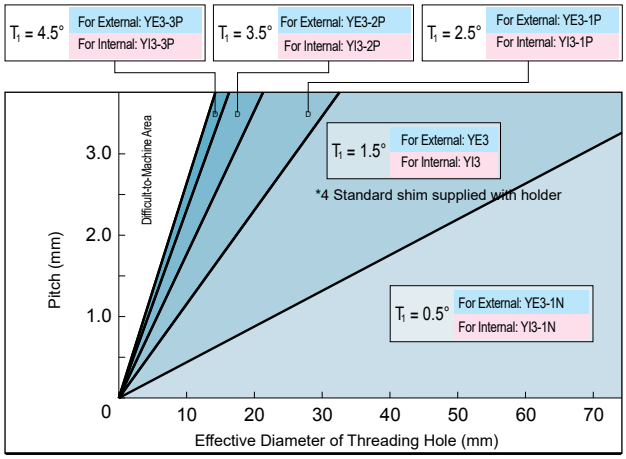

■ Shim Selection

If the pitch is large or thread diameter is small, the lead angle of the thread becomes larger and the effective relief angle of the leading edge becomes smaller. It is ideal to set the threading insert so that both right and left relief angles are equal.
Therefore, it is necessary to select an appropriate shim based on the thread pitch and effective diameter using the table below.

■ Shim Selection Procedure

(1) Choose from [Right-Hand Thread / Left-Hand Thread] in the table.
(2) Locate the required threading „pitch“.
(3) Locate the cell with the required „Effective Diameter“ range.
(4) Confirm the part no. at the „Shim“ row above the corresponding „Effective Diameter“ cell located previously.
If the shim part no. is different from the one currently in use, change to the correct one.

Example: When machining an M16×2,0 external right-hand thread, the pitch diameter is 14.701 mm. In the table below, locate [2,0] mm under the "Pitch" column and then move along the row to the right to locate the required "Effective Diameter" range [11,4 - 17,4] mm. As such, the correct shim should be [YE3-1P], shown in the corresponding cell under the "Internal" row below.

* SSTE Type/SSTI Type holders are shipped with shims for a lead angle of Y1 = 1,5° (SSTE Type: **YE3**, SSTI Type: **YI3**).
Shims for lead angles of Y1 = -1,5°, -0,5°, 0,5°, 2,5°, 3,5°, and 4,5° are sold separately.
* Shims are not needed for SSTI R1812M16 and SSTI R2016M16. (The holders are already provided with the standard holder inclination of 1,5°.)

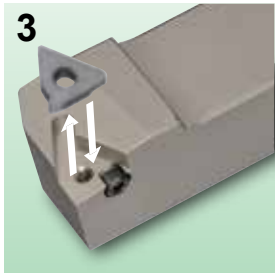

Shim Replacement

Remove the insert to expose the shim.

Loosen the shim set screw by one to two turns.

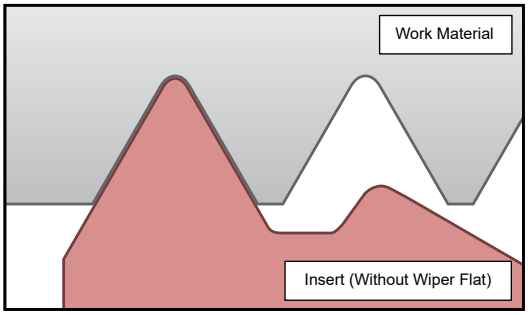

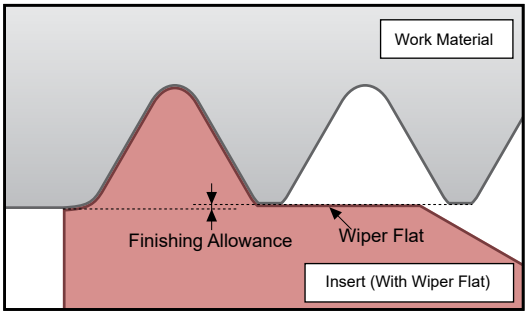

Remove the shim and attach a different shim that matches the lead.

Tighten the shim set screw (recommended tightening torque 1,0 to 1,5 Nm).

Wiper Flat

Without Wiper Flat	With Wiper Flat
	
• Performs threading without machining thread ridges (the machined surface from the previous process is left unworked.) • Enables machining of threads with different pitch widths with the same insert • Finishing of the internal (or external) diameter is required before the threading process. • Fine burrs are easily formed on edges of ridges.	• Enables machining of workpieces into shapes compliant with thread standards • Only specific thread specifications and pitch can be machined • In order to finish a thread with the wiper flat, a finishing allowance of 0,1 mm on each side is required. • Edges of ridges can be rounded off.

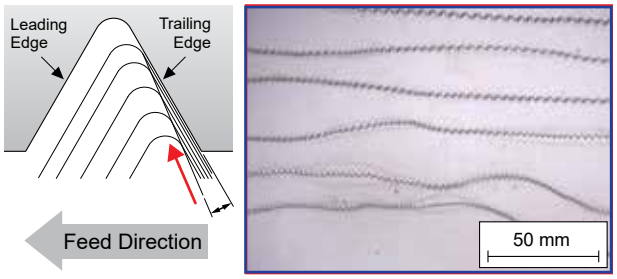

Infeed Method

The modified flank infeed is recommended for the SSTE type/SSTI type.
This infeed method, which features reduced chip curl diameters and stable chip control, can also decrease chipping on trailing edges that often occurs in radial infeed machining. (1° is recommended for the modification angle.)

● Impact of the Infeed Method on Chip Shapes

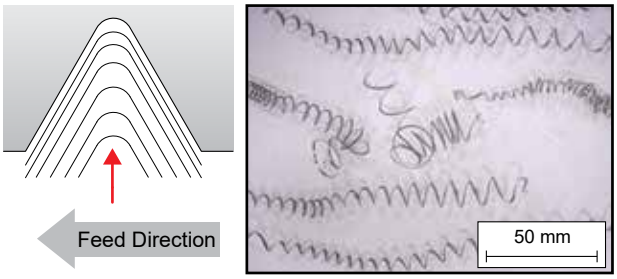

Work Material: X5CrMo17-12-2, M30 x 1,5 Cutting Conditions: v_c = 60 mm/min, wet, 8 Passes

Modified Flank Infeed

Reduced curl diameters ensure smooth, stable chip control (performance)

Radial Infeed Machining

Large curl diameters cause unstable chip control.

No. of passes and depths of cut in the table above are general guidelines only. Increase or decrease depending on conditions. However, the maximum depth of cut should be kept to 0,5mm or less.
When using an insert with a wiper flat, add machining allowance to the total depth of cut.

No. of passes and depths of cut in the table above are general guidelines only. Increase or decrease depending on conditions. However, the maximum depth of cut should be kept to 0,5 mm or less.
When using an insert with a wiper flat, add machining allowance to the total depth of cut.

General Features

Sumi Dual Mill DGC type utilizes double-sided inserts for excellent economy. This is a general-purpose cutter featuring high cutting edge strength for high efficiency milling and low-burr chipbreaker design that provides high qualitiy machined surface.

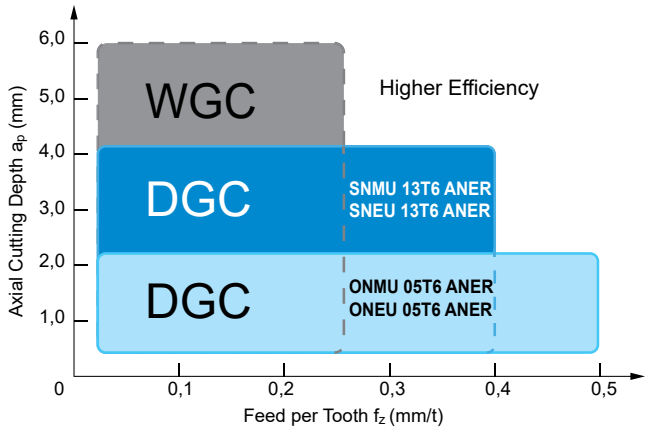

The DGC type insert lineup includes double-sided SNMU / SNEU and ONMU / ONEU types.
Up to 16 corners can be used for improved economy.

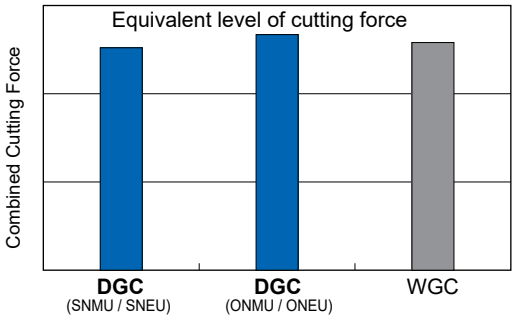

Characteristics

- Same cutting performance as single-sided inserts plus superior economy.
- Achieves level of cutting edge sharpness and machined surface quality equivalent to single-sided cutter at a maximum cutting depth of $a_p \leq 3$ mm.

Recommended Cutting Conditions for General Steel Milling

Cutting Force Comparison

Work Material:	34CrMo4
Tool:	Ø 100
Cutting Data:	v_c=200m/min, f_z=0,3mm/t, a_p=3mm, a_e=85mm

Dual-Purpose Body

Two types of inserts can be used with a single body depending on milling application to help reduce costs. Stronger than single-sided cutters.

– first recommendation
– economical double-sided design offers 8 cutting edges with SN_U inserts
– maximum depth of cut: a_p = 6 mm

– double-sided design with 16 corners for improved economy
– maximum depth of cut: a_p = 3 mm

max. a_p = 6 mm
8 corners use

Use two types of inserts for different applications.

max. a_p = 3 mm
16 corners use

Chipbreaker

Improved Milling Quality

FG type chipbreakers feature chamfer to minimize burrs and provide excellent milling qualitiy.

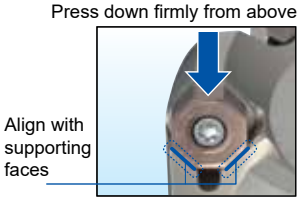

FG type inserts with low-burr design enable high-qualitiy milling with few burrs and little edge chipping.

Attaching Inserts

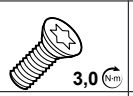

Octagonal Inserts

Firmly align insert with supporting face, press down in the direction of the arrow and tighten the screw to fix the insert.

Characteristics

- **Stable Cutting**
  Special chipbreaker designed for WGX enables lower cutting forces.
- **High Quality**
  Improved run-out precision and unique wiper edge shape ensure excellent surface finish quality.
  Optimised chamfer edge reduces burr and edge chipping.
- **Long Tool Life**
  Features high precision technology that reduces insert run-out variation and a new coating to provide stable and long tool life.

Insert Shape Characteristics

Unique wiper edge shape for improved surface roughness

"Wave Radius Mill"
WRCX Type

Features

The "Wave Mill" WRCX type is a new multi purpose milling cutter for face milling, slotting, helical boring, plunging and profiling. Its unique design features 16 corner polygon inserts and a durable cutter body manufactured from high tensile alloyed steel protected by a hard surface treatment. Insert rigidity is maximised via close tolerance seat pockets and centre clamped using a torxscrew . Choose from a variety of insert grades such as our award winning Diamond like Carbon DL 1000 capable of high feed machining aluminium, our uncoated H1 grade suitable for non-ferrous metals or our new ACP/ACK grades for steels and irons.

Advantages

- Durable cutter body – Special alloyed steel with hard surface.
- High feed cutting – Optimised pitch and high number of cutting edges
- Excellent chip removal – Wide pocket and integral coolant hole
- Maximum rigidity – Rigid clamping of inserts with TORXPLUS screw
- Wide application range – Carbon steels, alloy steels, stainless steels, high temperature alloys, diemould steels, aluminiums, non-ferrous metals etc

Features

The Wave Radius Mill RSX Series enables stable machining even when using equipment with low clamp rigidity thanks to its body design achieving excellent cutting performance and rigidity.
In addition to the ACM Series for stainless steel and exotic alloys two grades have been added:
ACP200 grade for steel machining and
ACK300 grade for cast iron machining.
Handle an even wider range of milling needs with the RSX(F)08000 and RSX(F)20000 types.

Characteristics

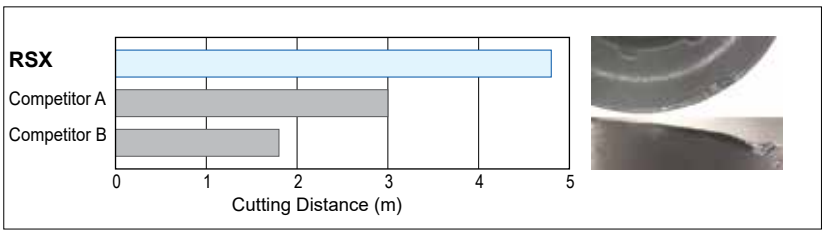

Smooth cutting action and low vibration machining provided based on the high rake angle design and high rigidity body.
High reliability achieved with ACM100/ACM200/ACM300 adopted for exotic alloy machining.
ACP200 for steel and ACK300 for cast iron enable stable machining in a wide range of applications.

Low Cutting Resistance, Less Vibration

Low cutting resistance and low vibration machining have been achieved with super high rake angle design + high rigidity body.

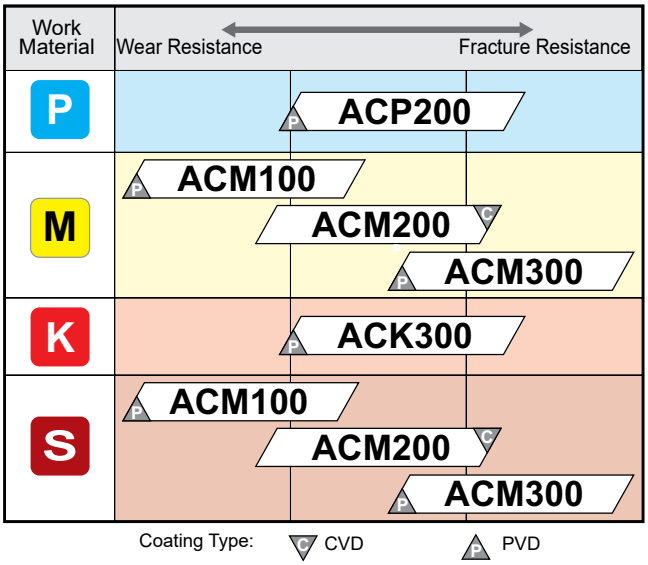

High Operability

Ease of corner control has been achieved with the adoption of a unique positioning mechanism that is highly precise and highly operable.

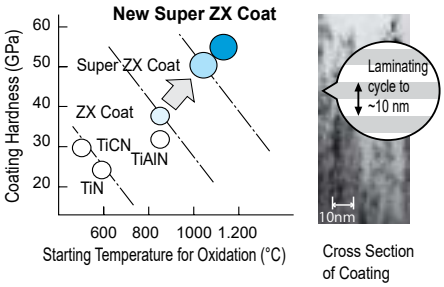

Insert size of 12 and 16 mm uses a maximum of 8 corners and an insert size of 10 mm uses a maximum of 4 corners.

Stable and Long Tool Life

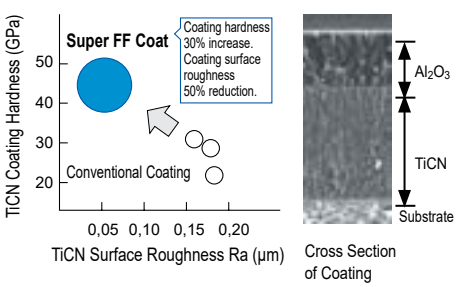

A long life ensured with the adoption of the ACM series and significant improvements have been made in processing exotic alloy and stainless steel machining.

ACM100/ACM300

ACM200

New Super ZX Coat

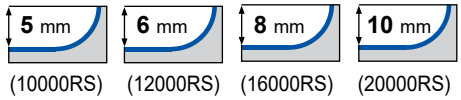

The product series with a coating film hardness approximately 40 % higher and an oxidation onset temperature 200 °C higher than conventional products.
Enables machining at least 1,5 times faster and more efficiently than conventional products.
A product life at least twice as long as that of conventional products achieved under the same machining conditions.

Super FF Coat

Smooth coating surface provides excellent adhesion and chipping resistance.
Improved coating adhesion strength.
Harder than conventional coatings with hugh improvements in wear resistance.
High speed, high effiency machining of more than 1,5 times than of conventional grades possible.
Achieving more than double the tool life of conventional grades under the same cutting conditions.

Milling of steel, stainless steel, cast iron and exotic alloys

Expansion

General Features

The Sumi Dual Mill DFC type employs cost effective double-sided inserts for high toughness and enhanced accuracy.
The double-side inserts are flexible and reduces costs.

Large Line-up

- Diameter from Ø 25 mm to Ø 200 mm
- Available as standard, fine and extra-fine pitch
- Bore diameter: metric
- Insert geometry: L, G, GS, H

New Insert Design Provides Excellent Machining Accuracy

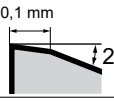

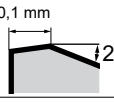

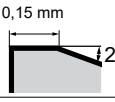

- The new insert design separates the location area and cutting edge producing an optimized solution.
- Machining accuracy is comparable to single sided inserts provided the DOC is less than 3 mm.
- The SEC-Sumi Dual Mill design, equips the user with a highly stable cutter for high feed machining applications.

Stable and High Cutting Performance Combined with High Toughness

- The excellent cutter performance offers efficient machining, enables high feed rate capability.
- The new insert construction provides extremely accurate edge to edge indexing whilst the location area offers high security and stability.

WFX Type

Expansion

General Features

Wave Mill WFX type for shoulder milling is a screw-locking type cutter capable of using four corners.
Ideal cutting edge design delivers good squareness.
Series expansion with the high-feed **WFXH** type and the **WFXC** type for chamfering.
A comprehensive lineup that covers a wide variety of applications.

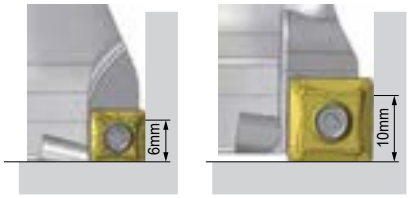

Characteristics

The insert shape, optimized for shoulder milling and combined with a high-precision body, leaves a superior machined surface finish.

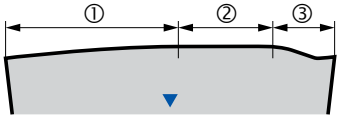

● Max. Depth of Cut

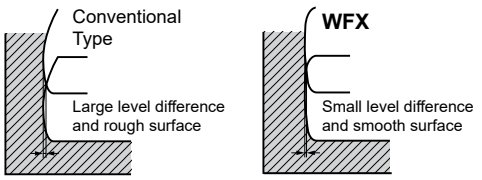

WFX08000 type　　WFX12000 type

● Optimized Edge Shape

① The convex shape ensures the cutting edge strength.

② The flat shape minimises differences in step levels.

③ The wiper edge function improves the surface roughness.

Wiper Insert

Optimised wiper edge shape provides superior surface roughness.

Wiper inserts are single-cornered.
Attach the wiper insert so that the chamfered corner is in location ① shown in the figure.
Be sure to use the corner with the ID mark (② in the figure).

General Features

High-efficient and high precision tangential shoulder milling cutter with tangentially mounted carbide inserts.

Characteristics

- **Tough & Sharp cutting edge**
  Tangentially mounted carbide insert design and optimized edge geometry realize extremely tough and sharp cutting action.

- **Very accurate and excellent surface finish**
  Thanks to newly developed fine carbide press / sintering technology and very accurate grinding technics, very periphery ground inserts generate very accurate and excellent surface finish.

- **Wide product range**
  2 different insert size series, 3 chip breaker range and various carbide grade combination offers wide range of machining application.

General Features

- **Supports Various Machining Operations**

  A lineup of cutter sizes from Ø 14 to Ø 160 mm, which enable large ramping angles, 28 repeater type items are now available in addition to the modular type and short shank type.

- **Excellent Machining Quality**

  With a combination of optimised cutting edge shape and high-precision molding technology, superb wall surface accuracy and surface finish qualitiy are achieved.

- **Excellent Sharpness with Low Resistance**

  Reducing machining noise and suppressing burrs, the lineup includes ground type inserts with a focus on sharpness.

- **Applicable to Various Work Materials**

  In addition to the general-purpose grade ACU2500, the new generatioin coated carbide grades XCU2500/XCK2000 are available. Applicable to various work materials such as steel, stainless steel, cast iron, exotic alloys and more.

Features

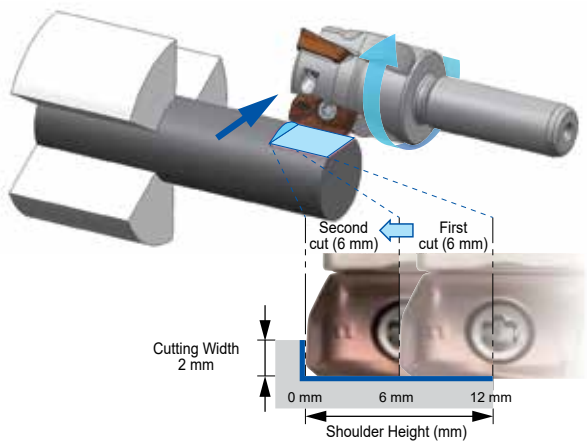

- **Developed for Multi-tasking Machines**
  Short shank type ideal for low-rigidity multi-tasking machines

- **Superb Machining Quality**
  Shank design ideal for ER collets with face contact design that increases rigidity, realizing excellent shoulder accuracy and finished surface quality.

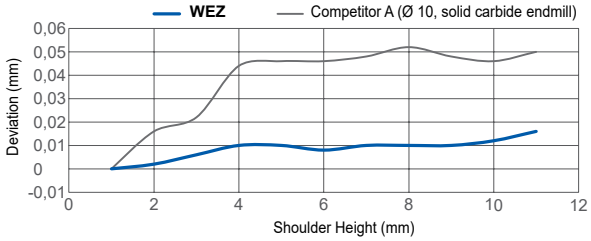

- **A Wide Selection of Inserts**
  Supports various machining applications with a wide selection of chipbreakers, with sharp cutting edges, different nose radi and dedicated grades for specific work materials.

Cutting Data:	**WEZ** type: v_c = 100 m/min, f_z = 0,05 mm/t, a_p = 2 mm, a_e = 12 mm, wet Competitor: v_c = 100 m/min, f_z = 0,05 mm/t, a_p = 2 mm, a_e = 6 mm x 2 passes, wet (solid carbide endmill)

Larger tool diameter than carbide solid endmills enables reduced number of passes for high-efficiency machining.

Good shoulder accuracy and machined surface quality, eliminating the finishing process.

■ High-precision Ground Class Insert with Excellent Sharpness

Ground Finish on Cutting Edge and Guide Face

The guide face has a ground finish as well as the cutting edge, minimizing corner difference when mounting on the body.
Stable runout precision and machining qualitiy.

■ Lineup of Chipbreakers for Ground Inserts

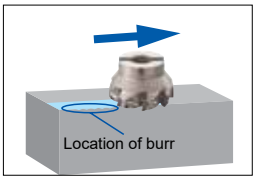

F Type

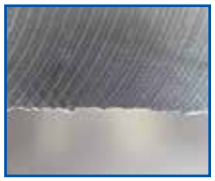

Cutting edge specialized for sharpness and machining accuracy

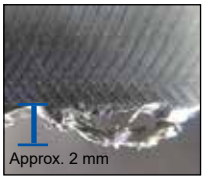

Sharpness from ground finish enables burr control.

Excellent squareness with all diameters.

Machine:	Vertical Machining Centre BT50,
Work Material	X5CrNiS18 9
Tool:	WEZ 11050 RS07 (Ø 50, 7 teeth)
Insert:	AOET11T308PEER-F (ACU2500)
Cutting Conditions:	v_c = 120 m/min, f_z = 0,12 mm/t, a_p = 1 mm, a_e = 30 mm, dry

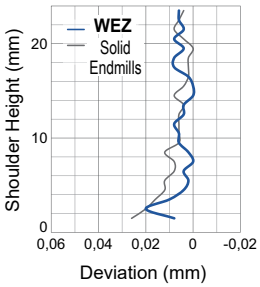

P Type

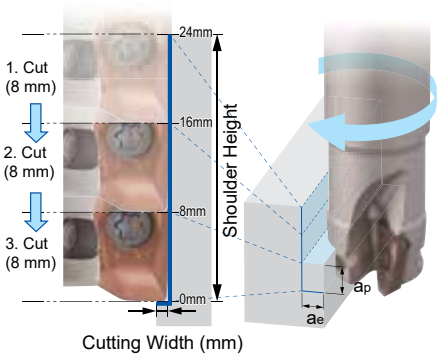

Chipbreaker for wall surface squareness equivalent to solid endmills

Premium item with cutting edge shape optimised for each cutter diameter while maintaining the F type chipbreaker's sharpness.

Enables wall surface squareness equal to solid endmills through a blade shape optimised for each tool diameter.

Insert Grades Selection Guide

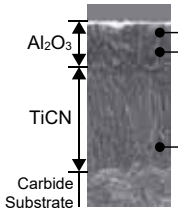

New generation coated carbide grades **XCU2500/ XCK2000** now available. Enhanced lineup of coatings in addition to cemented carbide and cermet for milling steel, stainless steel, cast iron and aluminum alloy.

Coating Features

New Absotech ™ (absolute technology) coating technology that realises absolute stability.

ABSOTECH CVD

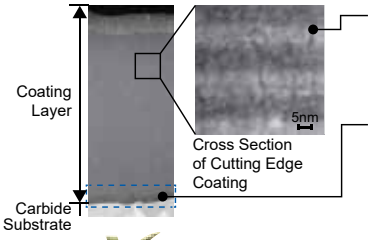

Special Surface Treatment
Suppresses thermal cracking by introducing high compressive stress, resulting in chipping resistance more than twice as good as conventional types

Crystal Orientation Control Al_2O_3
By controlling the growth direction, Al_2O_3 is reinforced for crater wear resistance more than twice as good as conventional types

High Hardness TiCN
Increased TiCN hardness by using a C-rich composition for flank wear resistance more than twice as good as conventional types.

Grades: ACP2000, ACK2000

ABSOTECH PVD

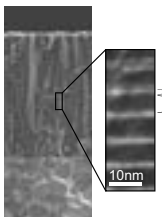

New Super Multi-Layered Composition
Higher hardness and twice the conventional wear resistance due to a fine crystal structure AlTiCrBN-based nano-layered coating.

High Adhesion Strength
Significantly improved coating adhesion. Chipping resistance more than twice as good as conventional types.

Grades: ACU2500, ACP3000, ACK3000

ABSOTECH X CVD

Pure cubic crystal AlTiN with high Al content
With proprietary structural control technology, differently composed layers of AlTiN are stacked at the nanometre level.
With a high Al-compositioin containing over 80% Al on average, it also maintains a cubic crystalline structure to achieve excellent thermal resitance and high hardness.
Vastly improved wear resistance.

Special Surface Treatment
Proprietary surface treatment introduces high compressioin stress to the coating, suppressing the development of cracks.
Greatly improved fracture and thermal crack resistance.

Grades: XCU2500, XCK2000

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine, work shape and clamping. They will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth and other factors.
For groove milling, reduce the feed rate approximately 70 % of the corresponding value shown above.

Precautions for Mounting

(1) Clean the mounting seat and contact parts.

(2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.

(3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.

(4) After tightening, check that there are no gaps between the surfaces.

Inserts are sold separately. Check the arbor mounting size (DCB) when selecting the cutter.

* For securing the Ø 80 mm and Ø 100 mm cutter to the arbors, use JIS B1176 hexagonal bolt.
(Ø 80 mm: M12x30 to 35 mm, Ø 100 mm: M16x40x45 mm)

Features

- **High-efficiency Shoulder Milling**

  Inserts for "WaveMill" WEZ type are arranged in multiple stages forming a long cutting edge, to enable high-efficiency shoulder milling of deep steps.

- **Very Low Vibration Tendency**

  Sharp milling inserts and irregular pitched body help to reduce chatter marks caused by vibration.

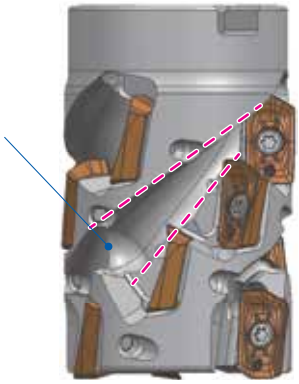

- **Support for all Types of Work Materials**

  A lineup of grades specific to each work materials, as well as the general-purpose ACU2500 grade, which is applicable to steel, stainless steel and cast iron.

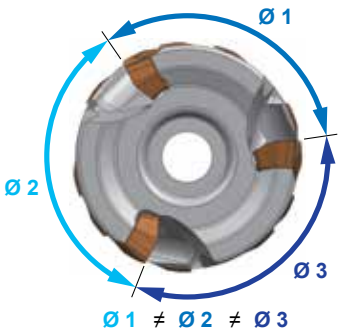

Body Features

- **Improved Flute Shape**

Optimised, upward tapering chip pocket geometry for improved chip removal and increased rigidity of the cutter body.

- **Irregular Pitched Body**

Irregular pitched body reduces vibration tendency

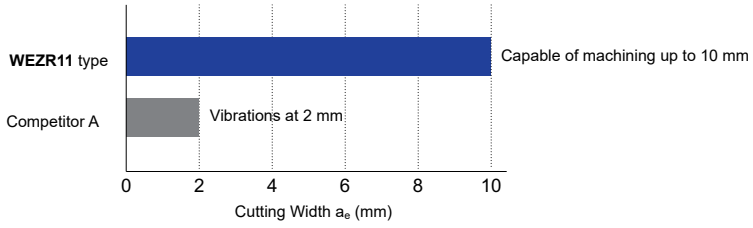

Cutting Performance

- **Significantly less vibrations are a result of the combination of sharp inserts and irregular tooth pitch.**

Cutting Conditions:	v_c = 150 m/min, f_z = 0,15 mm/t, a_p = 50 mm, dry

Cutting Performance

- Optimised cutting edge shape and high-precision molding technology result in excellent shoulder accuracy.

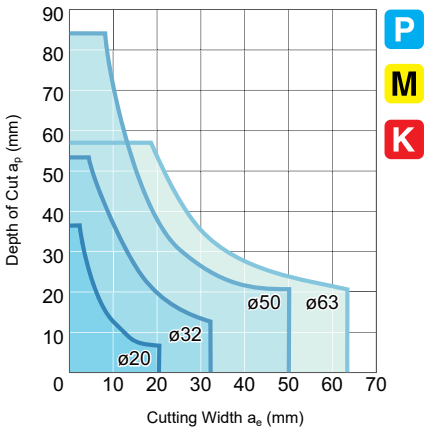

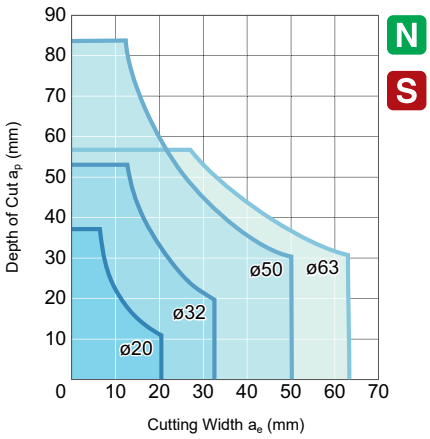

Machine:	Vertical Machining Centre BT50,
Work Material:	C55, overhang amount 60 mm
Tool:	WEZR 11032E3632Z02 (Ø 32, 2 teeth, 4-stage)
Insert:	AOET11T308PEER-G (ACU2500)
Cutting Conditions:	v_c = 160 m/min, f_z = 0,15 mm/t, a_p = 30 mm, a_p = 30 mm, dry

Application Range

- Steel, stainless steel, cast iron
- Aluminum alloys, titanium alloys

Note:
The depth of cut figures above are guidelines for use with BT50 machine tools. Use a depth of cut of approximately 50% if using BT40.
For a tool overhang of L/D = 3 or L/D = 4, use a depth of cut of approximately 50% or 25%, respectively.
There may be cases where machining cannot be performed at the depth of cut figures above, depending on the machine rigidity and work rigidity.

Note:
The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.
There may be cases where machining cannot be performed under recommended cutting conditions, depending on the machine rigidity and work rigidity.

*When mounting inserts with nose radius of ≥ 2,4 mm, modification of the body is required.

Modify this edge.

General Features

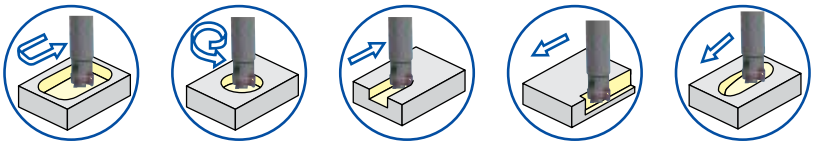

Stable and Reliabel Tool Life in Titanium Roughing

With combination of high toughness grade ACM300 and optimized cutting edge shape, stable and reliable tool life are achieved in roughing application of Titanium.

Suitable for Titanium Structure Parts for Aircraft

MTIX cutter with wide range of insert nose-radius and large ramping angle availiability is suitable for variable application of titanium structure parts for aircraft.

Large Application Range

ISO	Grade	Coating Thickness (μm)	Features
S	ACM300	3	Realises superb stability in machining of Titanium, due to a high-strength carbide substrate and highly chipping-resistance coating.

Precautions for Mounting

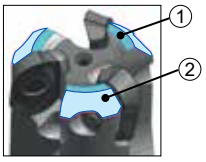

(1) Clean the mounting seat and contact parts.

(2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.

(3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.

(4) After tightening, check that there are no gaps between the surfaces.

Application Example

Structural Parts, Ti 6Al4V, Countering / Ramping

ACM300 achieved twice longer tool life against competitor's grade.

Cutter: MTIX 16050RS05 (Ø 50, No. of teeth:5)
Insert: XOMT 160540 PEER-E (ACM300)

Cutting Data: v_c = 50 M/min, a_p = 4 mm, f_z = 0,12mm/t, a_e = 10 mm, wet

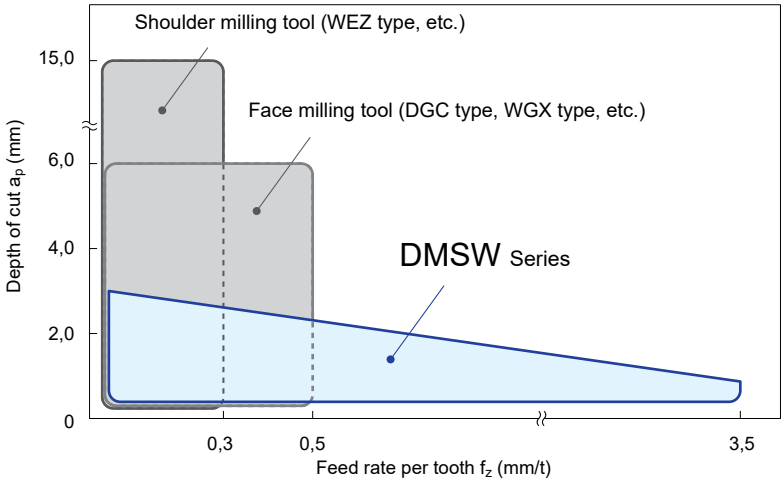

New

General Features

- High productivity thanks to an ultra-high metal removal rate as well as high economic efficiency, due to the stable six-edged insert.
- The arc-shaped cutting edge reduces the cutting force to a minimum. High-efficiency machining at maximum feed rate per tooth of 3,5 mm/t is possible.

Application Range

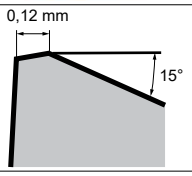

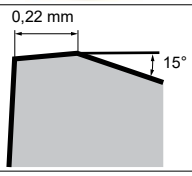

- Cutting depths up to 3 mm can be achieved. Feed rate per tooth up to 3,5 mm/t.
- Increases productivity.

Chipbreaker Selection Guide

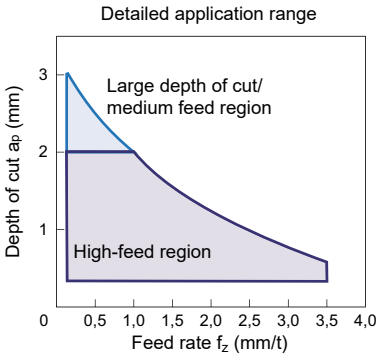

New

Features

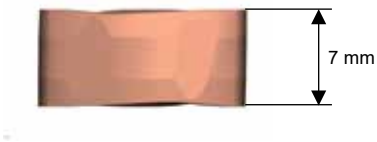

- A small chip cross-section due to a small cutting angle enables high feed rates per tooth.

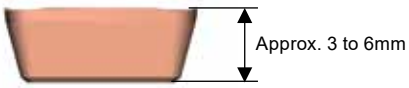

- Economical double-sided insert with 6-corner specification. Reassuring thick at 7 mm.

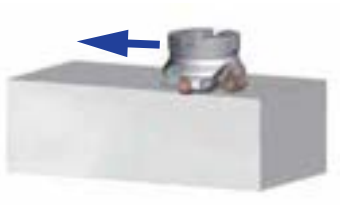

WNMU type

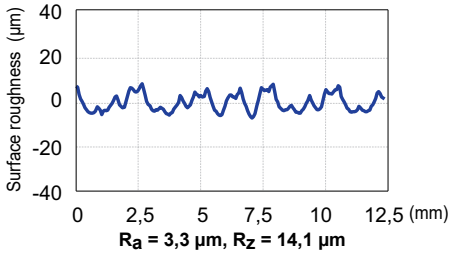

Conventional tool

- Even at high feedrates of 2,0 mm/t or more, a reasonable surface finish can be attained.

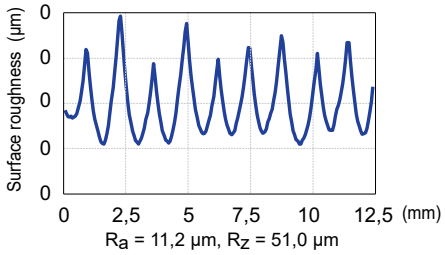

DMSW type

R_a = 3,3 µm, R_Z = 14,1 µm

Tool:	DMSW 08063RS04	Cutting data:	v_c = 150 m/min, f_z = 2,5 mm/t, a_p = 0,5 mm, a_e = 40 mm, dry

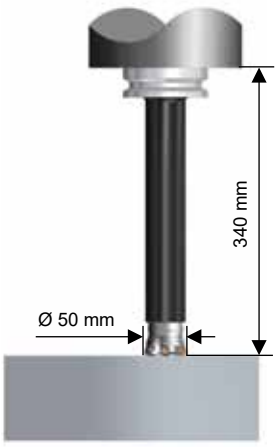

- Small cutting angle (15°) controls cutting force toward the back force direction.
  Suppresses chatter in long tool overhang machining, increasing efficiency.

General Features

WaveMill WFXH type is a high efficiency, multi-purpose cutter, that uses the WFX series inserts for high-feed roughing and a variety of processes.

Characteristics

Stable, high-efficiency milling with superior cutting edge sharpness.
Supports various types of processes (ramping and helical milling).
Able to use the selection of inserts from the WFX series.

Minimum Cutting Diameter

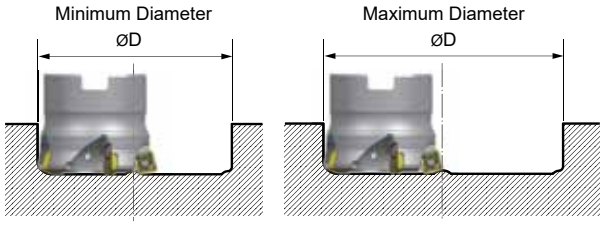

Minimum cutting diameter (DCN) will depend on the insert that is used. Using an insert with a large nose radius is recommended for the WFXH type.

The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity. The above figures are guidelines for use with the BT50 machine tool.
The above conditions assume a tool overhang length of L/D = 3 (i.e. overhang length is 3 times tool diameter) or less.
When tool overhang is more than L/D = 3 and less or equal L/D = 5, settings should be adjusted to approximately 70 % to 80 % of those indicated in the above cutting conditions (i.e. ap and fz).
When tool overhang is more than L/D = 5 and less or equal L/D = 8, settings should be adjusted to approximately 50 % to 60 % of those indicated in the above cutting conditions (i.e. ap and fz).

Assuming 0,2 mm of regrinding each time, an edge can be used up to 6 times.
(Peripheral edge cannot be reground.)

If you wish to use reground blades you shall use sets of blades with matching size of the same level in order to keep the balance.

Expansion

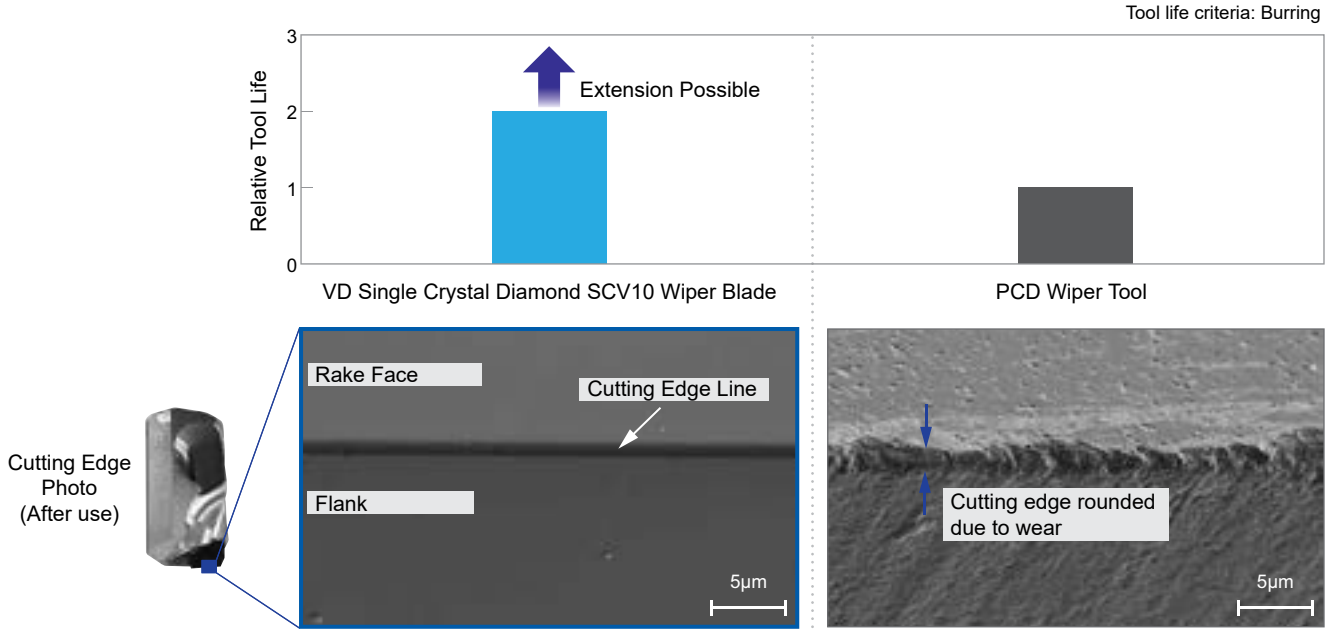

CVD Single Crystal Diamond SCV10 Wiper Blade

Wiper blade adopts high-strength single-crystal diamond using Sumitomo Electric Hardmetal's vapour phase synthesis technology.
Sharp cutting edge realises burr-free, mirror finish surface quality in aluminum alloy machining.
Superior wear resistance maintains cutting edge sharpness for a long time, reducing total tool costs.

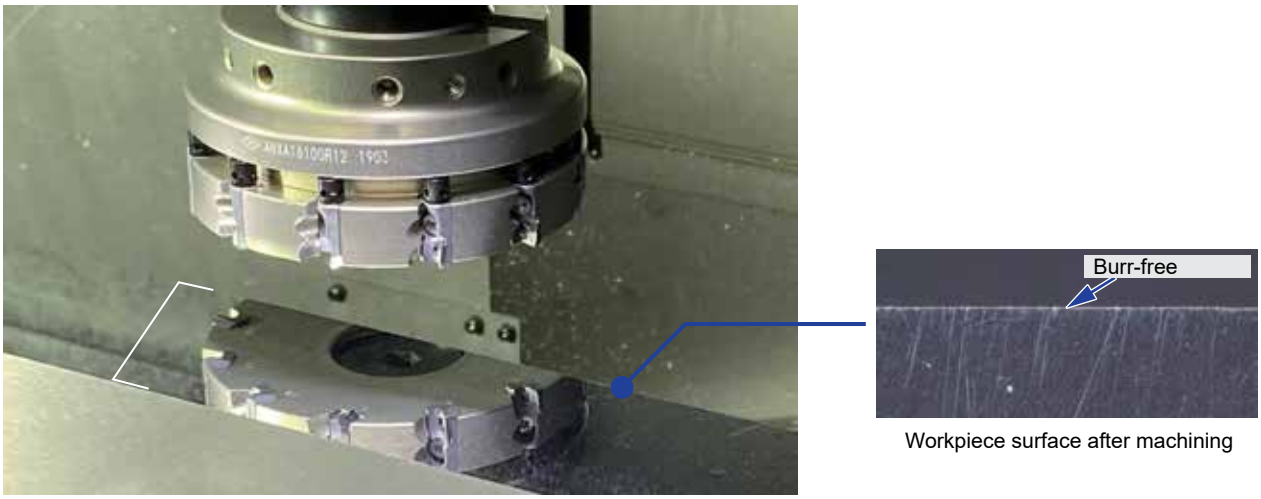

Burr-free

Sharp cutting edge and excellent wear resistance suppress burrs over the long term.

Mirror Finishing

Sharp cutting edge achieves mirror finish with cutting alone.

Workpiece surface after machining

Polycrystalline Diamond SUMIDIA DA1000 / DA90

Through the ideal combination of diamond particle size and binder, SUMIDIA DA1000/DA90 possess various features and is suitable for all kinds of applications such as machining of aluminum alloy and cemented carbide.

Grades, Features and Applications

Grade	Features	Applications	Diamond share (%)	Average grain size of diamond particles (μm)	Hardness HK (GPa)	TRS (GPa)
DA1000	High-density sintered grade made of ultra-fine grain diamond that exhibits excellent wear and fracture resistance as well as edge sharpness.	Machining of High-Silicon Aluminum Alloy, Rough, Interrupt and Finish Machining of Aluminum Alloy, Woodcraft or Wooden Board Cutting/Facing, General Finishing of Non-Ferrous Metals	90–95	≤ 0,5	50–60	≈ 2,60
DA90	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminum. Shows the highest diamond content for excellent wear resistance.	Machining of High-Silicon Aluminum Alloy, Machining of Aluminum Composite (MMC), Green or Semi-Sintered Cemented Carbide & Ceramic Roughing, Machining of Sintered Ceramic/Stone/Rock	90–95	≤ 50	50–65	≈ 1,10

Blades are sold separately. If using a blade for corner radius machining (ANB1604R/ANB1608R), DC = DCX.
The weight includes the weight of the blade and parts (excluding the centre bolt).
All aluminium alloy bodies with a maximum blade diameter (DCX) of Ø 80 to Ø 125 have the same diameter (DCB) of the retainer hole (metric Ø 27/in Ø 25,4).

High Speed Finishing of Grey Cast Iron

Features

- High speed machining v_c=1.500m/min
- Excellent surface roughness Rz = 3,2 (Ra = 1,0)
- Safety structure for the centrifugal force under high speed cutting conditions
- Run-out is less than 10 µm
- Easy assembling method using the setting gauge
- Running cost is reduced because of economical insert

SUMIBORON ”BN Finish Mill”

Application

GG25–GG30 (HB200–250) grey cast iron with pearlite matrix, and ferrite matrix (HB130–160)
Application examples: engine block, cylinder block, etc

Specifications

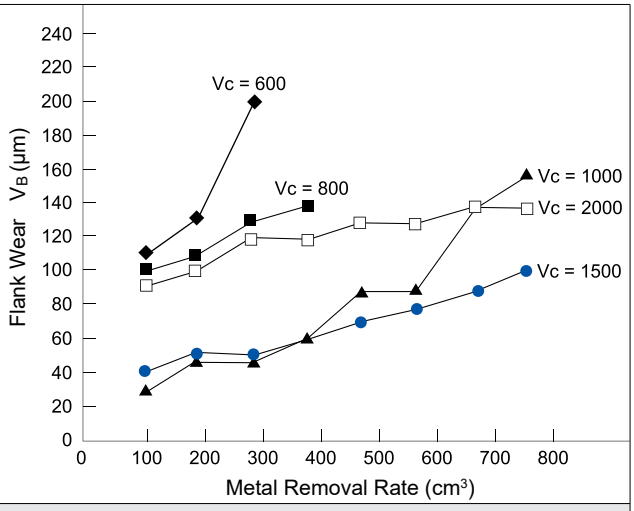

FMU Type: ø80–ø315 mm
Insert: SNEW1203ADTR/L
Low cutting force type: SNEW1203ADTR/L-S

Recommended Cutting Conditions

Speed: v_c = 800–2000 m/min
Feed: f_z = 0,1–0,3 mm/tooth
Depth: a_p = 0,5 mm or less
Dry cutting

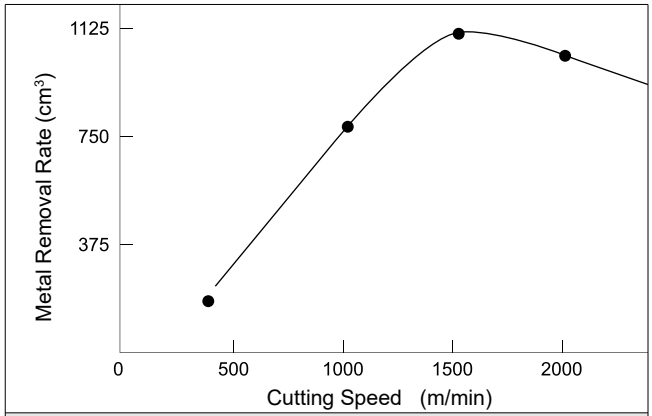

Performance

● Tool Life Diagram

Work Material : GG25 H_B 240 (Pearlite)
Cutting Speed : v_c = 600–4000 m/min
Feed Rate : f_z = 0,15 mm/tooth
Depth of Cut : a_p = 0,5 mm, Dry

● Estimated Tool Life

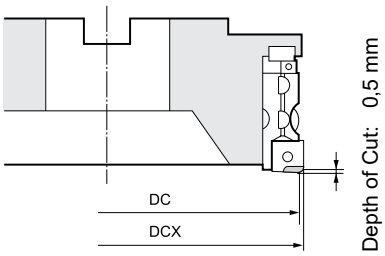

Work Material : GG25 H_B 240 (Pearlite)
Cutting Speed : v_c = 400–4000 m/min
Feed Rate : f_z = 0,15 mm/tooth
Depth of Cut : a_p = 0,5 mm, Dry

- Milling of ductile cast iron and alloy steel casting do not produce the best results.
- Dry cutting is recommended. Wet cutting will result in chipping of cutting edges in the early stages due to thermal cracking.

Modular Tools

General Features

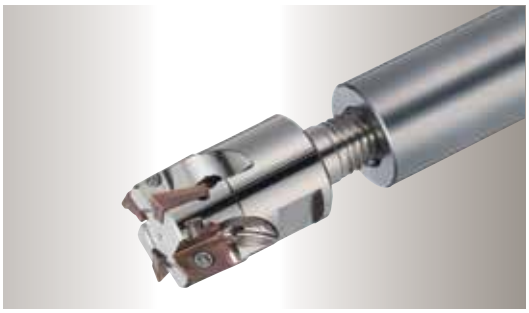

Indexable head endmills are available in 10 types:

WEZ	**MSX**
WEX	**RSX**
WFX	**WRXC**
DMSW	**WFXC**
WFXH	**ANXS**

In addition to carbide arbors and steel arbors, the lineup of integrated BBT types enables a variety of combinations.

General-purpose grade applicable to any work material. Introducing the new grade ACU2500, which is applicable to a wide variety of processes and work materials such as steel, stainless steel and cast iron.

Suitable for milling with **long overhangs** when combined with carbide or steel arbors!

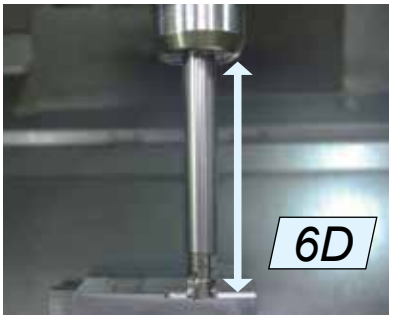

Easy to change screw-on endmill type WEX and carbide arbor

When combined with BBT integrated arbors, **high load milling** is supported.

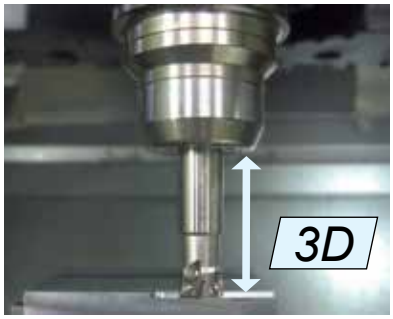

RSX type + BBT30 integrated arbor

Modular Head + Carbide Arbor

Standard Shank Type Endmill

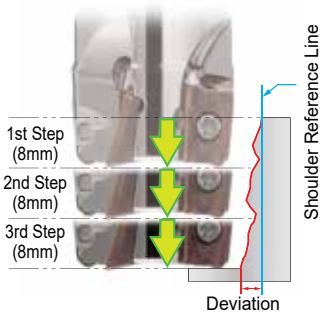

Note: Cutting conditions can vary according to cutter reach, rigidity of machine tool / workpiece etc.

Features

The Metal Slash Mill type MSX is a new multi function high shear milling cutter with ultra high feed capability suitable for face milling, slotting, plunging and helical boring. At 50GPa the ultra hard Super ZX coated inserts feature a sharp cutting edge which demonstrates extreme resistance to wear and heat massively boosting productivity and tool life.

The vibration free cutting action ensures accurate sizing, improved surface finish, and protection of the machine tool/workpiece from damage. Inserts are double clamped in wide chip gullets to maximise rigidity and chip evacuation with temperature at the cutting edge being easily controlled via an optional air blast through integral coolant holes.The MSX cutter is readily applied to general purpose machining across the P (steel) M (stainless) and K (cast iron) range of workpiece materials with impressive results.

Advantages

Integral Coolant Hole

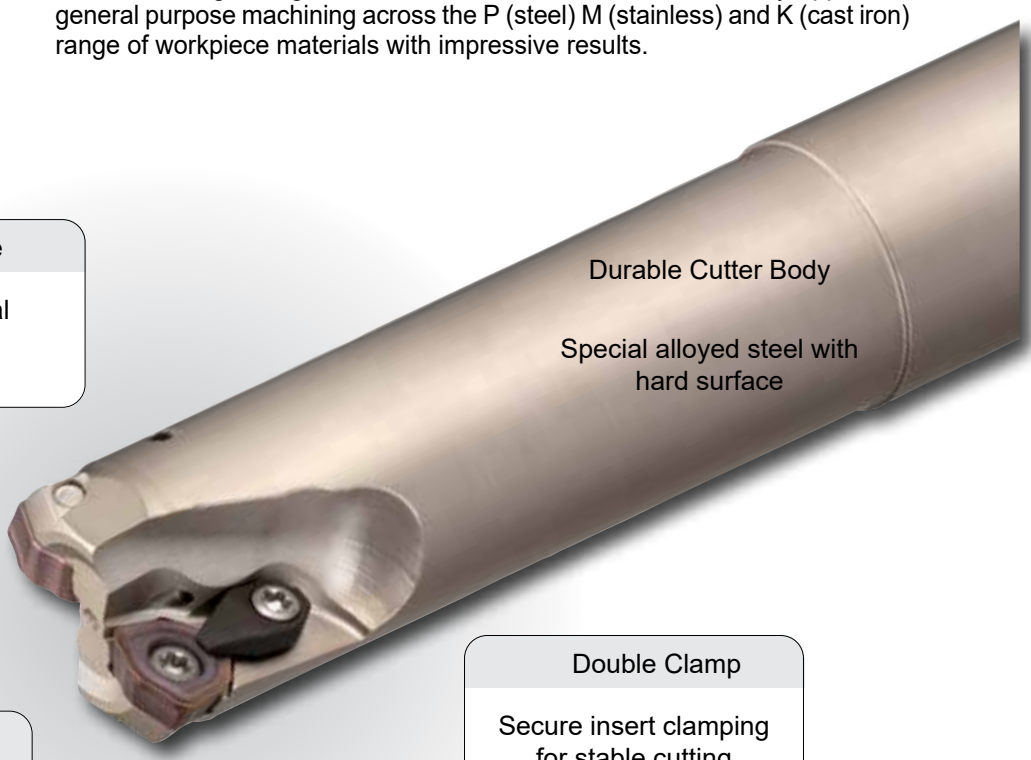

Otimised chip removal – massive chip avacuation pockets

Wide Application Range

Face milling, slotting, helical boring and plunging

Low Cutting Force

Unique insert shape reduces cutting force

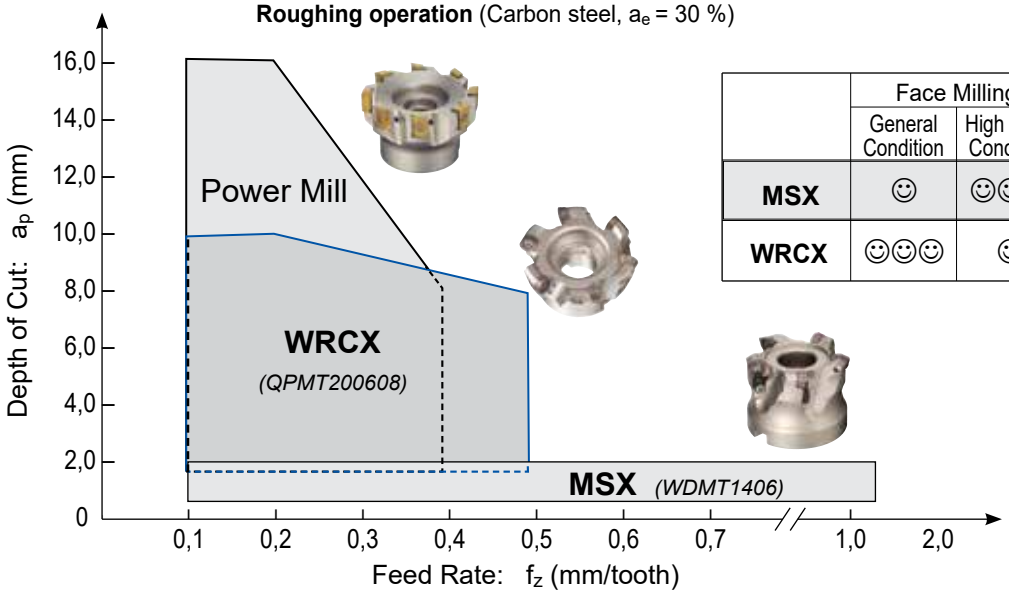

Double Clamp

Secure insert clamping for stable cutting

Application Range

Roughing operation (Carbon steel, a_e = 30 %)

- The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity.
  The above figures are guidelines for use with the BT50 machine tool.
- The above cutting conditions assume a tool overhang length of L/D = 3 (i.e. overhang length is 3 times tool diameter) or less.
  When tool overhang is **more than L/D = 3 and less than or equal L/D = 5**, settings should be adjusted to approximately **70 to 80 %** of those indicated in the above cutting conditions (i.e. a_p and Feed Rate).
  When tool overhang is **more than L/D = 5 and less than or equal L/D = 8**, settings should be adjusted to approximately **50 to 60 %** of those indicated in the above cutting conditions (i.e. a_p and Feed Rate).

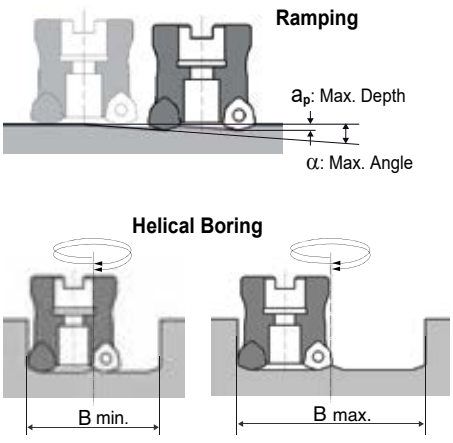

■ Information for Programming

For machine programming, please use the theoretical corner radius (R) shown in the list.

WFXH Type

Expansion

General Features

WaveMill WFXH type is a high efficiency, multi-purpose cutter, that uses the WFX series inserts for high-feed roughing and a variety of processes.

Characteristics

Stable, high-efficiency milling with superior cutting edge sharpness.
Supports various types of processes (ramping and helical milling).
Able to use the selection of inserts from the WFX series.

Notes on Corner Finishing - Remaining Material

Actual machined corners will have uncut and overcut portions due to the shape of the inserts.

Minimum Cutting Diameter

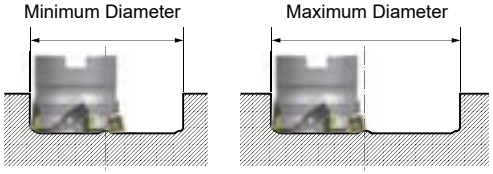

Minimum cutting diameter (DCN) will depend on the insert that is used. Using an insert with a large nose radius is recommended for the WFXH type.

The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity. The above figures are guidelines for use with the BT50 machine tool.
The above conditions assume a tool overhang length of L/D = 3 (i.e. overhang length is 3 times tool diameter) or less.
When tool overhang is more than L/D = 3 and less or equal L/D = 5, settings should be adjusted to approximately 70 % to 80 % of those indicated in the above cutting conditions (i.e. ap and ft).
When tool overhang is more than L/D = 5 and less or equal L/D = 8, settings should be adjusted to approximately 50 % to 60 % of those indicated in the above cutting conditions (i.e. ap and ft).

General Features

The Sumi Dual Mill DFC type employs cost effective double-sided inserts for high toughness and enhanced accuracy.
The double-side inserts are flexible and reduces costs.

- Diameter from Ø 25 mm to Ø 200 mm
- Available as standard, fine and extra-fine pitch
- Bore diameter: metric
- Insert geometry: L, G, GS, H

General Features

High-efficient and high precision tangential shoulder milling cutter with tangentially mounted carbide inserts.

Characteristics

- Tough & Sharp cutting edge
- Very accurate and excellent surface finish
- Wide product range

Lineup of Chipbreakers for Ground Inserts

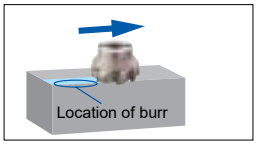

F Type

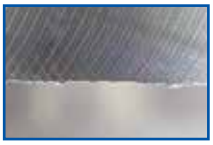

Cutting edge specialized for sharpness and machining accuracy

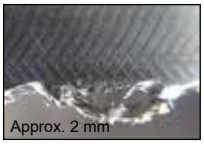

Sharpness from ground finish enables burr control.

Excellent squareness with all diameters.

Machine:	Vertical Machining Centre BT50,
Work Material	X5CrNiS18 9
Tool:	WEZ 11050 RS07 (Ø 50, 7 teeth)
Insert:	AOET11T308PEER-F (ACU2500)
Cutting Conditions:	v_c = 120 m/min, f_z = 0,12 mm/t, a_p = 1 mm, a_e = 30 mm, dry

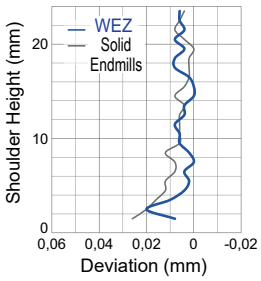

P Type

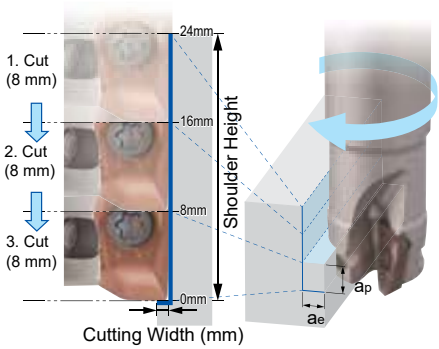

Chipbreaker for wall surface squareness equivalent to solid endmills

Premium item with cutting edge shape optimised for each cutter diameter while maintaining the F type chipbreaker's sharpness.

Enables wall surface squareness equal to solid endmills through a blade shape optimised for each tool diameter.

P Type Chipbreaker Selection

Cutting Conditions:	v_c = 150 m/min, f_z = 0,1 mm/t, a_p = 8 mm x 3 passes, a_e = 1 mm, dry

S Type

Sharp edge chipbreaker for non-ferrous metals, with excellent adhesion resistance

Suppresses adhesion with rake face lapping.

DLC coat inserts available for further improved adhesion resistance.

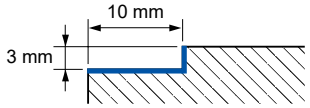

Machine:	Vertical Machining Centre BT50,
Work Material:	AlSi12Cu
Tool:	WEZ 11020 E03 (Ø 20, 3 teeth)
Insert:	AOET11T308PEER-S (H20)

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine, work shape and clamping. They will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth and other factors.
For groove milling, reduce the feed rate approximately 70 % of the corresponding value shown above.

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine, work shape and clamping. They will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth and other factors.
For groove milling, reduce the feed rate approximately 70 % of the corresponding value shown above.

Precautions for Mounting

(1) Clean the mounting seat and contact parts.

(2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.

(3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.

(4) After tightening, check that there are no gaps between the surfaces.

For cutting conditions by work material, see page H28.
When using G type chipbreakers, set the efficiency to 80%.
The recommended cutting conditions may not be practical depending on the operating conditions (e. g. machine, work material shape, clamping system).

Recommended Cutting Conditions

→ H28

Tool: WEZ17025ES02-16
Insert: AOET1705_ _ PEER-F

For cutting conditions by work material, see page 8.
When using G type chipbreakers, set the efficiency to 80%.
The recommended cutting conditions may not be practical depending on the operating conditions (e. g. machine, work material shape, clamping system).

● Precision insert with strong cutting edge and low cutting force

Wave shaped cutting edge design lowers cutting resistance yet improves cutting edge strength.
Achieving high quality finish with high precision cutting edge.
Smooth cutting even for deep grooves and low rigidity machines.

High precision curved cutting edge

High rake wave cutting edge

● Internal Coolant Holes

Improved chip evacuation with air or coolant supply.

● Wide Variety of Inserts

6 types of chipbreaker design
(L, G, H, E, EH and S)
9 milling grades for a wide range of work materials and applications.
- ACP100, ACP200, ACP300
  (steel milling grades)
- ACK200, ACK300
  (cast iron milling grades)
- ACM200, ACM300
  (stainless steel, exotic alloy milling grades)
- DL1000, H1
  (aluminium milling grades)

● High Durable Body

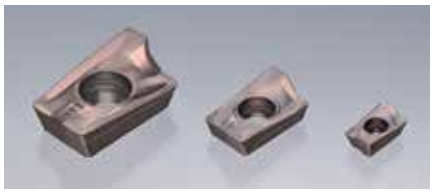

Special surface treatment improves corrosion resistance as well as scratch resistance.
Increased screw size improves clamping force and durability.

WEX1000 Type Expansion

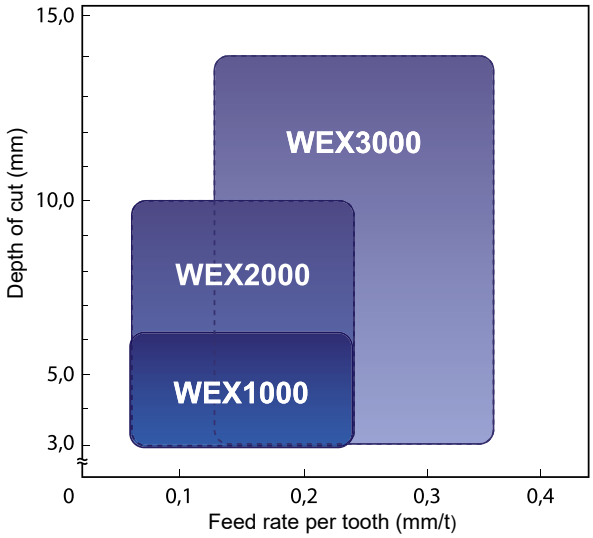

- Efficient machining via high number of inserts
- Precise insert change tolerance provides high surface roughness qualitiy
- High shoulder accuracy due to optimized cutting edge
- Stable cutting conditions when utilising low rigidity machines
- Economic advantages using small AXMT06 inserts

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine, work shape and clamping. They will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth and other factors.

For groove milling, reduce the feed rate approximately 70 % of the corresponding value shown above.

■ Recommended Values for Helical Milling and Ramping

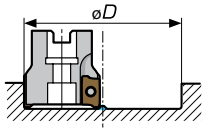

● Helical Boring

≤ Min. Diameter

Center uncut portion cannot be removed by traverse cutting with the same cutter.

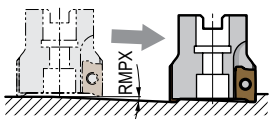

≥ Max. Diameter

Center uncut portion can be removed by traverse cutting with the same cutter.

● Plunging

"Wave Mill" Series
WAX Type

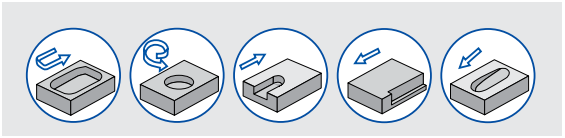

Overview

Based on our proven Wavemill design this new range of WAX cutters is capable of rough and finishing Aluminium Alloys and other Non Ferrous Metals. It is ideal for high productivity Aluminium machining to exacting tolerances in the Aircraft, Electronics, and Automotive industries. The award winning Auroracoat DLC (diamond like carbon) inserts resist chip adhesion and substantially increase both tool life and productivity when dry machining Aluminium helping customers boost compliance with ISO14001 accreditation standards

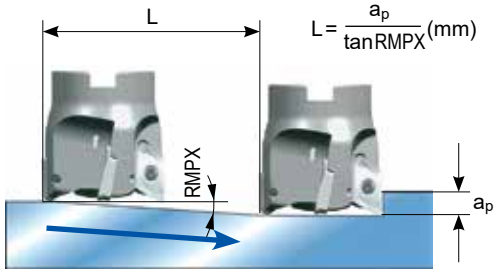

Advantages

- High Productivity
- Dry machining capability with MQL system
- DLC (diamond like carbon) inserts
- True 90 degree shoulder milling
- Chip adhesion resistance
- Wide range of nose radius

Ramping (Slant Milling)

Maximum ramping angle (α max. max.) depends on cutter diameter.
Minimum milling length (L min) is the ramping distance required to reach the maximum cutting depth (a_p max) at the maximum ramping angle of that cutter.
Minimum milling length (L) for any depth can be calculated by the equation below:

"Wave Repeater Mill"
WRX Type

General Features

The WRX Wave repeater end mill system features AXMT style inserts vertically mounted and positioned to provide a long continuous cutting edge suitable for deep shoulder milling. Designed to run at elevated feed rates the soft cutting action reduces cutting resistance, vibration and noise to substantially improve tool life and surface finish.

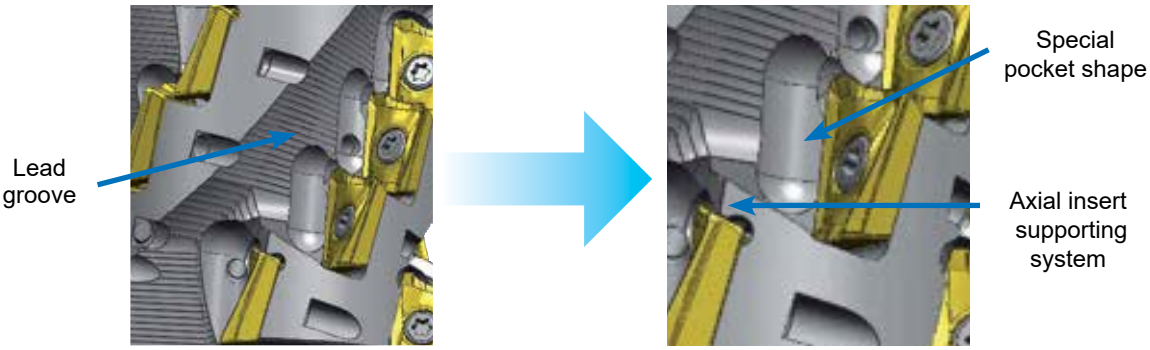

Available with our new generation Super FF and Super ZX coated inserts for unbeatable performance.

Product Range

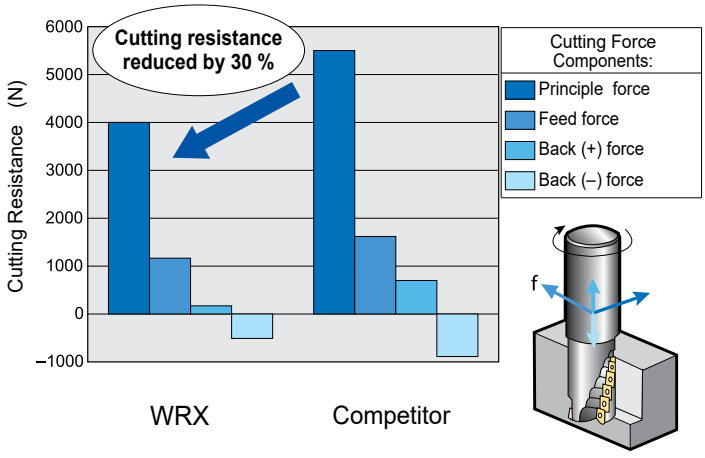

- WRX 2000 series with 12 mm inserts
- WRX 3000 series with 17 mm inserts
- Cutter Diameters - 20 mm (a_p = 18 mm) to 100 mm (a_p = 53 mm)
- Special Order Options – WRX Cutter with integrated arbor
  Shell type with detachable head
- Wide ISO Application Range – P/M/K/N classification

Advantages

- Optimised insert positions reduce cutting resistance and vibration
- Integral coolant improves chip flow
- Primary chip slot for smooth and fast chip evacuation
- Optimised insert pocket maximises rigidity
- Bottom edge support improves tool life and cutting performance

- Dry machining is recommended (air cooling) - if lubricant is used, we recommend CVD coated grades (ACP100 / ACK200) or tough PVD grades (ACP300 / ACK300).
- Insert geometry: L type for low cutting forces, thinly coated components. G type for general application, H type offers high cutting edge stability for rough and heavy cutting conditions.

General Features

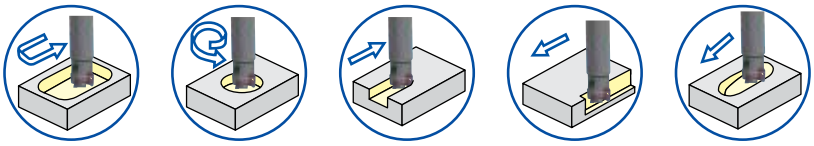

Stable and Reliabel Tool Life in Titanium Roughing

With combination of high toughness grade ACM300 and optimized cutting edge shape, stable and reliable tool life are achieved in roughing application of Titanium.

Suitable for Titanium Structure Parts for Aircraft

MTIX cutter with wide range of insert nose-radius and large ramping angle availiability is suitable for variable application of titanium structure parts for aircraft.

Large Application Range

ISO	Grade	Coating Thickness (μm)	Features
S	ACM300	3	Realises superb stability in machining of Titanium, due to a high-strength carbide substrate and highly chipping-resistance coating.

Precautions for Mounting

(1) Clean the mounting seat and contact parts.

(2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.

(3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.

(4) After tightening, check that there are no gaps between the surfaces.

② Add chamfer 4,5 mm

"Wave Ball Mill" for Roughing
WBMR Type

Features

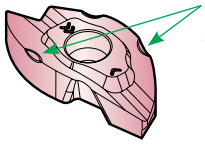

Particularly suitable for die mold machining the WBMR replaceable insert ball nose endmill efficiently roughs complex profiles.

Its high feed rate capability is a direct result of a sharp cutting edge which is maintained during the cutting cycle by the special cemented carbide substrate working in parallel with the ultra hard ZX coating.

Advantages

- Wave shaped cutting edge
- Economical M class insert
- Precise clamping
- High feed rate capability

Performance

● Cutting Resistance

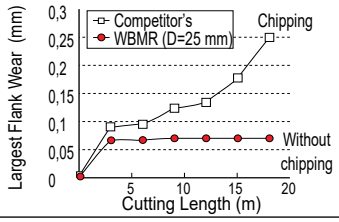

Cutting Conditions (Shoulder milling, downcut)
v_c = 200 m/min, f_z = 0.15 mm/tooth
Axial a_p: 5 mm, Radial a_e: 5 mm
Work Material : C50

● Anti-Rotational Mechanism

Circumferential movement of the insert caused by cutting forces is controlled by guide faces A, B & C, so as to allow stable cutting.

● Insert Life

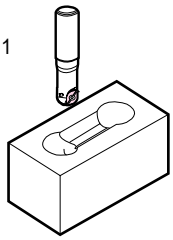

Cutting Conditions (Shoulder milling, downcut)
v_c = 100 m/min, f_z = 0.15 mm/tooth
Axial a_p: 5mm, Radial a_e: 5 mm
Work Material : X 40 CrMoV 5-1(HRC45)

Application Example

● Cold Molding Die

Work Material :
X 155 CrVMo 12 1

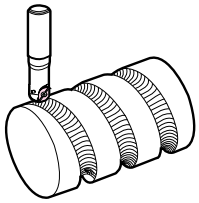

<Results>
Flank wear after continuous cutting for seven hours was less than other manufacturer's product.
Stable cutting was observed.

WBMR 2200S (ø 20 mm)
Insert Grade : ACZ350

Cutting Conditions :
n = 2200 rpm, v_f = 500 mm/min
Depth of Cut : 0,3–2 mm
Non-water soluble cutting oil

● Injection Molded Part

(Cr-Mo steel + Stellite-overlay)

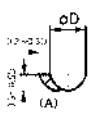

<Results>
Wave ball (ø30mm) could cut without chattering while other manufacturer's products could not cut at all due to chattering.

WBMR 2300M (ø 30 mm)
Insert Grade : ACZ350

Cutting Conditions :
n = 500 rpm, v_f = 35 mm/min
Depth of Cut : 5 mm
Dry cut

"Wave Ball Mill" for Finishing
WBMF Type

Features

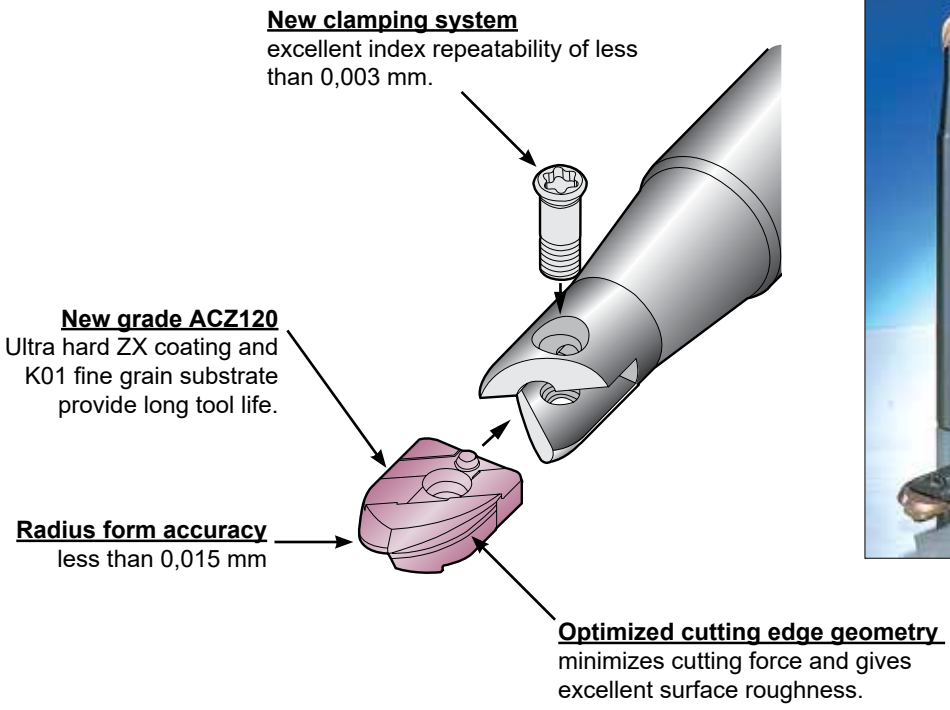

The outstanding results obtained from this finishing cutter are due to the combination of its large sigmoid blade and precise clamping system making it extremely rigid !

The WBMF achieves an excellent machined finish greatly reducing hand finishing and polishing operations.

Advantages

- Unique rigid clamping system
- Large sigmoid blade
- Smooth cutting action
- High quality machined surface
- Ultra hard ZX coated cutting edge

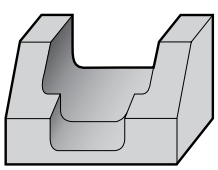

Application Example

● Bumper Moulding Die

Work Material :
C55

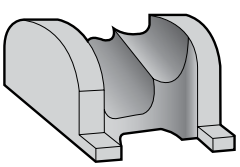

<Results>
Surface roughness after continuous cutting for twelve hours was better than other manufacturer's product.
Less width of flank wear was observed.

WBMF1200M (ø20mm) Insert : ZPGU2471100 Grade : ACZ120	Cutting Conditions v_c = 88 m/min v_f = 700 mm/min (f_z = 0,25 mm/tooth) Width of Cut : 0,5 mm Depth of Cut : 0,5 mm Dry

● Bumper Moulding Die

Work Material :
C50

<Results>
Smooth cutting and good surface finish after continuous cutting for eight hours

WBMF1200M (ø20mm) Insert : ZPGU2471100 Grade : ACZ120	Cutting Conditions v_c = 190 m/min v_f = 1200 mm/min (f_z = 0,21 mm/tooth) Width of Cut : 0,2 mm Depth of Cut : 0,2 mm Dry

General Features

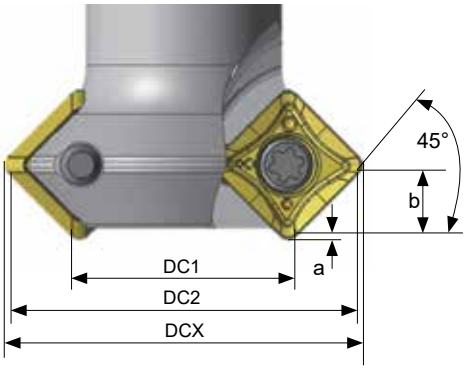

The WaveMill WFXC type is a chamfering tool that uses inserts for the WFX series. This allows the WFXC type to support many types of work materials using a variety of grades.

Application Notes

Since chamfering uses the straight cutting edge portion of the insert, the range that can be chamfered will change depending on the corner radius (RE) of the insert that is attached to the body.
Work diameter: Use in a range grater or equal to DC1 and less than or equal to DC2.
Depth: The workpiece can be chamfered from „a“, which is the distance from the tip of the tool to the straight cutting edge at the depth indicated by „b“.

Features

- **Drastically Reduced Runout Adjustment Time**
  Simple screw-fastening structure enables fine adjustments to be made easily.
- **Blade Through Coolant**
  Secures a supply of coolant to the cutting edge and breaks chips thoroughly.
- **Lightweight Aluminum Alloy Body**
  Utilizing aluminum alloy to achieve a total weight of less than 1,3 kg for a Ø 125 mm cutter with 22 teeth.

- **Reduces Running Costs by Drastically Increasing Blade, Insert Regrinding Allowance (to 1,0 mm)**

Assuming 0,2 mm of regrinding each time, an edge can be used up to 6 times.
(Peripheral edge cannot be reground.)

If you wish to use reground blades you shall use sets of blades with matching size of the same level in order to keep the balance.

Adjustment of the Blades, Runout Alignment

① 

Insert the blade into its seat.

② 

While holding the blade against the seat, install the clamping bolt using the provided wrench, pre-tightening the bolt. (recommended pre-torque is 1 N·m)

③ 

Using the provided wrench for the height adjustment screw, set the height to your predetermined value.

④ 

Fully tighten the clamp bolt. (recommended torque is 2 N·m)

Characteristics and Applications

- Wide variation of three flute types and four flute lengths enable use in a wide variety of applications.
- Fine carbide substrate provides high transverse rupture strength and excellent thermal shock resistance improving reliability in wet cutting applications.
- GSX Coating provides improved reliability and longer tool life.
- Large rake angle and unique flute design improve sharpness and chip evacuation.
- Cutting teeth with gash land improves corner flute strength.
- Sharper edge S type and fracture resistant C type added to the 2D size series.

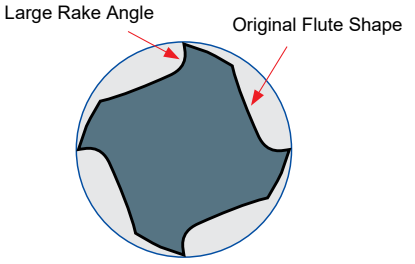

● Wear Resistance

● Thermal Resistance

● Improved Chip Evacuation

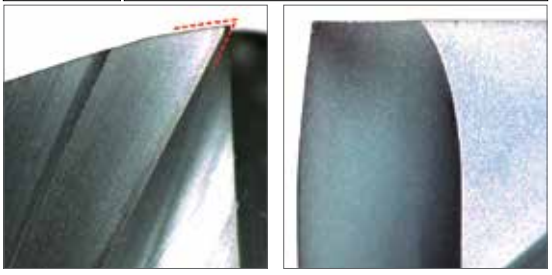

Large rake angle combined with our unique flute design improves sharpness and chip evacuation.

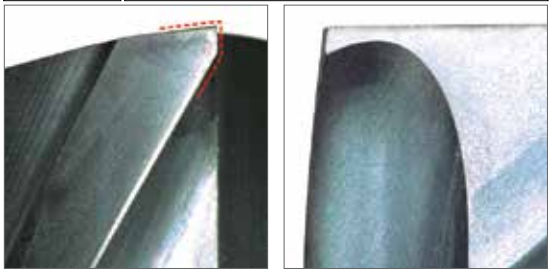

2 cutting edge designs expand machining applications

Sharper edge S type and fracture resistant C type added to the 2D size series.

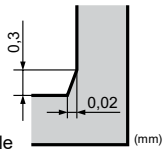

S Type Sharp Corner: Sharper Edge Design

C Type Gash Land: Fracture Resistant Design

Note: In gash land drilling, some material remains as shown on the right. If you need sharp corners, use the S Type.

GSX MILL Anti-vibration Type (Square/Radius)

■ Characteristics and Applications

- Optimized irregular pitch and lead affords:
  - Drastically improved chattering and fracture resistance !
  - Less cutting force Allows high-speed, high-feed cutting.
- Rounded lands greatly improve machined surface quality (from ø 4 and up).
- New fine-grained carbide substrate and special coating for better rigidity and thermal and wear resistance.

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. This series is not recommended for grooving.
6. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

■ Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. In rare cases, chattering may occur in early milling stages, dissipating after 2m of cutting.
5. If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. Use step machining of 0.1Dc when drilling stainless steel, heat resistant alloy, and titanium alloy.
5. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

Series Code	No. of Teeth	Diameter	Cutting Edge	Cutting Edge Length

S: Sharp Edge
C: Gash Land Drilling

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. This series is not recommended for grooving.
6. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

■ Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. In rear cases, chattering may occur in early milling stages, dissipating after 2 m of cutting.
5. If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

■ Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blowing when dry machining.
3. Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

EPMS Series

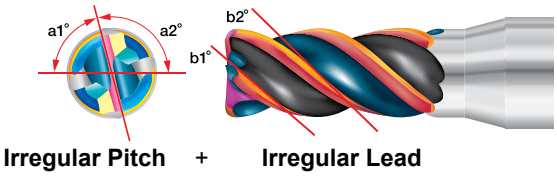

New

Features

- Solid endmill EPMS-Series (**E**x **P**ress **M**ill S) for high-performance milling applications
- Higher efficiency and tool life due to new technology of latest developed carbide substrate and coating combined with the new optimized tool design
- Available with 4/5/6 flutes, different diameters and edge radii
- Excellent performance in machining of exotic alloys like Ti-alloys, super alloys and heat resistant steels
- Suitable for Titanium structure parts for airplane
- Anti-vibration design for reliable and efficient machining in a wide application range

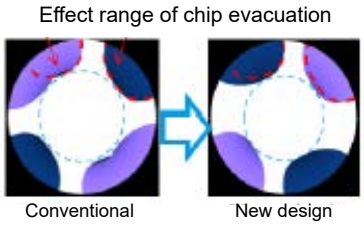

Anti-Vibration Design

Irregular Pitch + **Irregular Lead**

Reduce the vibration dramatically, especially for poor clamping and thin wall geometry, increase the parts accuracy and tool life for customers

Optimized Flute Geometry

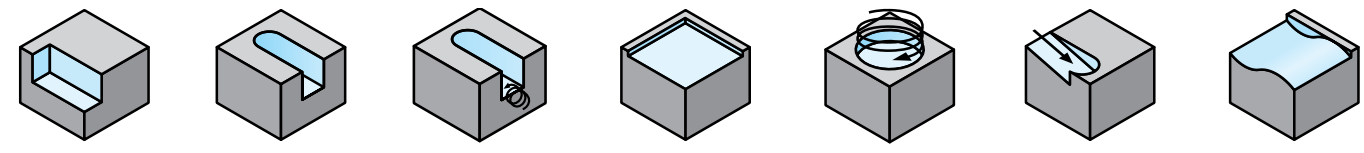

Smooth chip evacuation is realized to ensure stable and safe milling process for customers.

SSEH Series

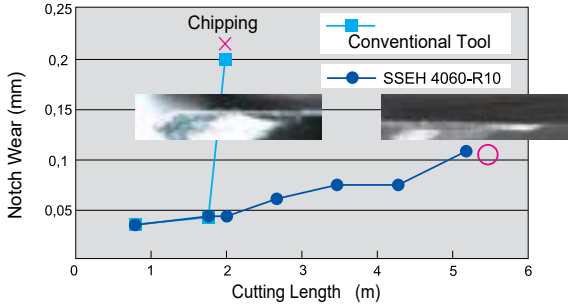

SSEH Radius

■ Characteristics and Applications

- Steep helix (45° helix) improves sharpness.
- Combination of unique flute design and semi-mirrored surface improves chip evacuation and adhesion resistance.
- Ultra-smooth coating with improved hardness and heat resistance combined with tough carbide substrate improves tool life when working with heat resistant alloys.
- Unique, smooth radius shape mitigates cutting impact and improves fracture resistance.
- Both coated and uncoated types are available in stock to meet various conditions.

■ Application Examples

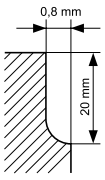

- Inconel 718 (Side Milling)

Tool Diameter: ø 6 × R1
Cutting Conditions: v_c = 20 m/min, f_z = 0,025 mm/t, a_p = 5 mm, a_e = 0,5 mm, wet

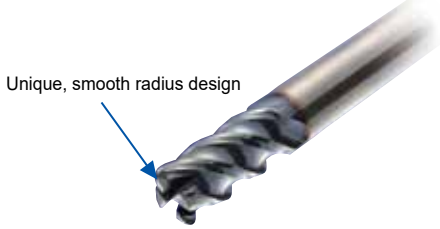

- Inconel 713 (Side Milling)

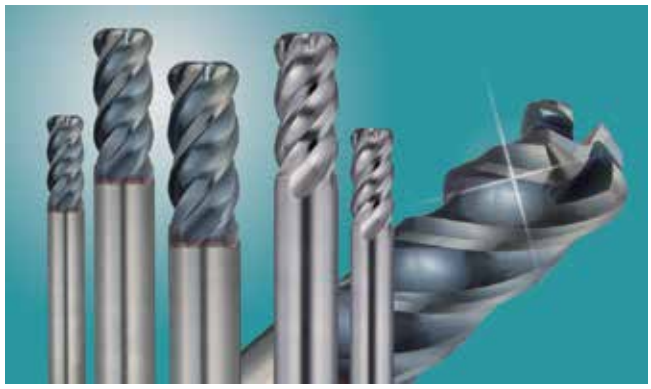

SSEH 4100W-R10	Competitor's Product
	

Tool Diameter : ø 10 x R1
Cutting Conditions : v_c= 32 m/min, f_z = 0,018 mm/t
a_p = 20 mm, a_e = 0,8 m, Dry

In Sumitomo Electric Hardmetal tests, the special coating with excellent adhesion resistance provided less cutting edge adhesion than the competitor's product and enabled fracturefree machining.
The competitor's product suffered from edge adhesion leading to breakage.

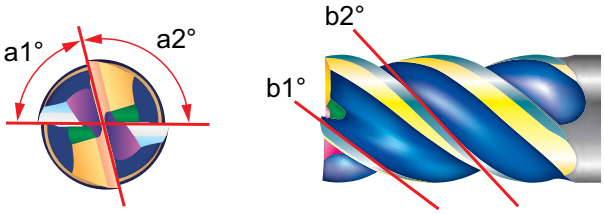

SSEH Radius Anti-vibration Type

■ Characteristics and Applications

- New anti-vibration type added to the SSEH type endmill for exotic alloys.
- Builds on the same features of existing endmills by adding an irregular lead for exceptionally good anti-vibration performance.
- Compatible with wide range of milling for exotic alloys including SUS, Inconel, and titanium.
- Reduces chattering for high-speed, high-feed cutting.
- Both coated and uncoated types are available in stock to meet various conditions.

■ Recommended Cutting Conditions

1. For stable machining, a more rigid machine is recommended.
2. Wet machining is recommended for stainless steel and heat resistant alloy applications.
3. If cutting noise and vibration are present, please change the cutting conditions accordingly.

Features

Sumitomo Electric's "AURORA" COAT is a high hardness, low coefficient layer of "Diamond Like Carbon" (DLC).

Other than producing excellent surface finish for machining of Aluminium and non-ferrous metals, DLC coat can be used for dry cutting and is environmental friendly.

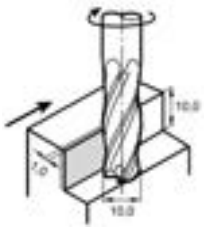

Characteristics / Application

- Very smooth AURORA COAT results in low adhesion as well as good surface finish
- With lower cutting forces and high rigidity, this series is suitable for low rigidity machine
- Available in 2 and 4 flutes square type as well as ballnose type endmills

■ Recommended Cutting Conditions

Recommended :

(1) Cutting performance is improved when using a high rigidity machine.

(2) Speeds and feeds should be reduced when there is any excessive vibration or strange noise during the operation.

(3) In case of chatter first check the cutting conditions.

SSUP MILL Series

Features

ZX coated general use endmill for high efficient slotting and side cutting of steels, stainless steels, high temperature alloys and cast irons.

Unique flute design and strong cutting edge ensure excellent chip control even when rough machining slots.

Feed rate up to 2000 mm/min with and without coolant

Advantages

- Unique flute design for excellent chip removal
- Extra strong cutting edge
- 40° high helix angle for high feed rates
- New ZX coating for excellent wear resistance
- Smooth cutting
- Excellent rigid wide cutting land

(1) Cutting performance is improved when using a high rigidity machine.
(2) Speeds and feeds should be reduced when slotting some stainless steels.
(3) In case of chatter first check the cutting conditions.

Recommended Cutting Conditions

(1) If cutting noise and vibration are present, please change the cutting conditions accordingly.
(2) If the machine is not designed to achieve the recommended spindle speed, please use the max. spindle speed available.

Characteristics / Application

- Very smooth AURORA COAT results in low adhesion as well as good surface finish
- With lower cutting forces and high rigidity, this series is suitable for low rigidity machine

■ Characteristics / Application

1. For stable machining, a more rigid machine is recommended.
2. Wet machining is recommended for stainless steel and heat resistant alloy applications.
3. If cutting noise and vibration are present, please change the cutting conditions accordingly.

■ Recommended Cutting Conditions

Cutting speed: v_c (m/min), Spindle revolutions: n (rpm), Feed per tooth: f_z (mm/tooth), Feed speed: v_f (mm/min)

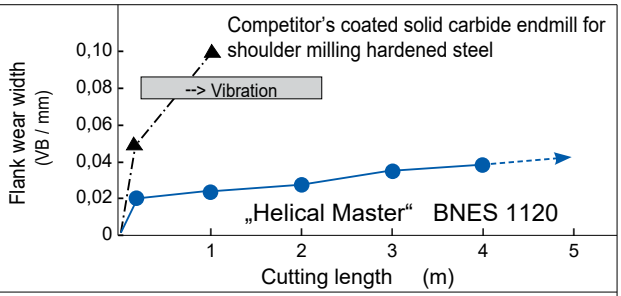

Depth of cut : $a_p \leq D$

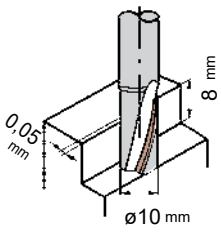

Tooling example	DC	Hardened steel (H_RC 50–57) v_c = 100–170 m/min			Hardened steel (H_RC 58–65) v_c = 80–150 m/min

	14–16	$a_e \leq$ 0,2 mm	n = 2000–3800	v_f (mm/min) = 140–260	$a_e \leq$ 0,15 mm	n = 1600–3400	v_f (mm/min) = 110–230

Recommendation: Dry cutting (Air coolant)
Down-cut milling
Minimise the overhang
Use a rigid machine

■ Performance

● Long Tool Life and High Efficiency

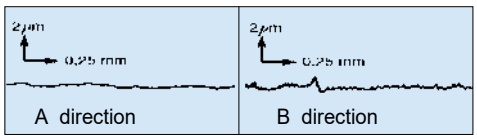

Work material: X155CrVMo12-1
Hardness: H_RC 60

Cutting data:
v_c = 100 m/min (**Helical Master**)
v_c = 40 m/min (Competitor's coated solid carbide endmill)
v_f = 186 mm/min

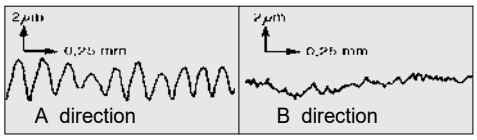

Down-cut milling
Dry cutting

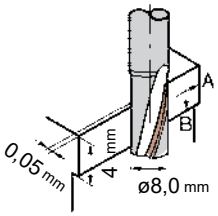

● Excellent Surface Roughness

"Helical Master" BNES 1080 ø 8,0

Conventional straight flute CBN endmill, ø 8,0

Work material: 15Cr3
Hardness: H_RC 55–58
Cutting data: v_c = 130 m/min
v_f = 310 mm/min

Down-cut milling
Dry cutting

Important Notes

(1) For stable machining, a more rigid machine is recommended.
(2) Air blast or oil mist coolant is recommended.
(3) Shorten overhang as much as possible.

Recommended Cutting Conditions

- Use a machine with high rigidity for stable cutting.
- Non-water soluble coolant recommended. Supply as a mist or external coolant.
  Take fire prevention precautions to avoid fire hazards caused by sparks igniting during machining or tool breakage.
- Shorten overhang as much as possible.
- Adjust cutting conditions as necessary as machine rigidity and other conditions may vary.
- Depth of cut shown in the table of conditions are maximum depths. Adjust the actual depth of cut to the desired machined surface finish.

Multi-Drill Series

General Features

MultiDrill series is Sumitomo's original brand of high performance drills that have a special cutting edge design coupled with an advance carbide substrate.
The series has a comprehensive selection of diameters and drill lengths to cover a wide range of work materials and require-ments, providing high efficiency, high precision and cost effectiveness.

Advantages

- Unique curved flute design with proven enhanced chip formation and removal, resulting in better hole accuracy.
- High speed and high efficient drilling is made possible with the combination of a special substrate with an advanced PVD coating. (10x tool life of HSS drills, 5x the efficiency)
- Wide selection range (Diameter: 0,03–65 mm, Drilling depths L/D: 2–30)
- Other diameters and length can be asked and offered

Advantages

- High process reliability in stainless steel and low carbon steel
- Can be used on low-performance machines! (→avoids overload!)
- High surface quality in the bore
- Sharp cutting edge
- High adhesion resistance by Sumi-Power Coating

Chip Control

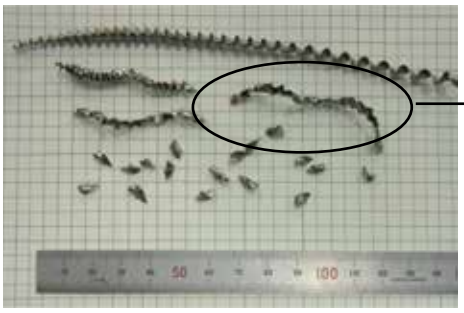

Drill:	Ø 8 mm, L/D = 5

DEX Coating

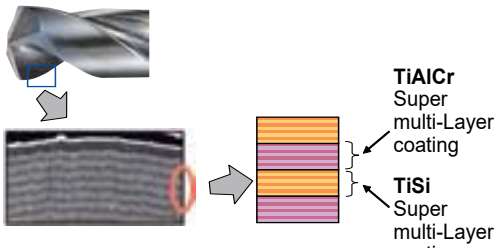

General Features

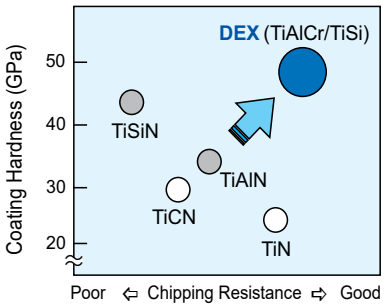

- Sumitomo Electric Hardmetal's next-generation drill coating utilises nano-coating technology to provide more than double the tool life of conventional coatings.
- Silicon and chrome improve usure, heat, and adhesion resistance.
- New super multi-layered structure offers significantly improved chip resistance (coating strength).

Characteristics

- Coating Design
  World's first combined super multi-layered coating is made from alternate layers of super multilayered substrates.

- Characteristics of Films

DEX Coat Application Examples

- MultiDrill GS Type Drilling Examples

Comparison of Usure Resistance

Edge Usure Comparison for 70 m Drilling

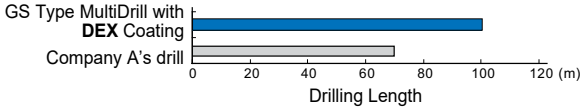

Shoulder and rake face feature improved usure resistance enabling long tool life.

DEX Coating MultiDrill GS Type

Concurrent A Dril

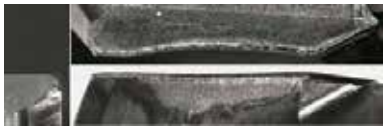

Tool:	MDW 0800 GS4
Work Material:	C50 (HB200)
Cutting Conditions:	v_c = 70 m/min, f = 0,25 mm/rev, a_p = 32 mm External coolant (Water soluble)

Comparison of Adhesion Resistance

Edge Usure Comparison for 100 m Drilling

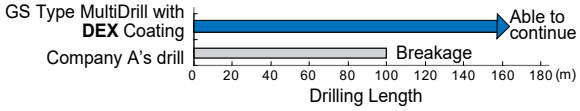

Offers significantly improved fracture resistance to counter problems caused by shoulder and flute adhesion in soft steel drilling.

DEX Coating MultiDrill GS Type

Competitor B Dril

Tool:	MDW 0600 GS4
Work Material:	15CrMo5 (HB120)
Cutting Conditions:	v_c = 60 m/min, f = 0,18 mm/rev, a_p = 18 mm External coolant (Water soluble)

- Long MultiDrill XHT Type Drilling Examples

Reduced margin usure during deep hole MQL drilling increases number of regrinds.

DEX Coating

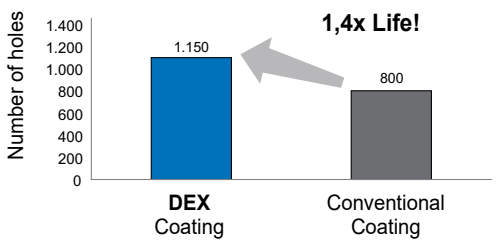

Conventional Coating

Tool:	MDW 0497 XHT20 (Ø 4,97 L/D = 29)
Work Material:	42CrMo4 (HB275) Crank Shaft
Cutting Conditions:	v_c= 70 m/min, f = 0,23 mm/rev, a_p = 75 mm MQL

- MultiDrill SMD Type Drilling Examples

Offers longer tool life with SEC MultiDrills as well.

Tool:	SMDH 210 M (Ø 21,0)
Work Material:	36Mn5 (HB350) Construction Mashine Componemt
Cutting Conditions:	v_c = 60 m/min, f = 0,25 mm/rev, a_p = 25 mm Water soluble Coolant

SUPER MULTI-DRILLS
GS Type

General Features

Super MultiDrill GS types are solid carbide drills that employ a new flute design and wide chip pocket to achieve excellent chip management and evacuation.
DEX coating enables stable and long tool life over a wide range of work materials and applications.

Characteristics and Applications

- **Long tool life**
  New cutting edge design and special DEX coating provide long tool life with a wide variety of work materials.
- **Stable chip evacuation**
  New flute shape significantly improves chip management and evacuation.
- **Quiet cutting and stable cutting resistance**
  Stable drilling with little wobble even in small machine applications.
- **Environmentally-friendly**
  Compatible with the MQL (Minimum Quantity Lubrication) system.

■ How to Order

Non-Stock Items will be required minimum order quantity for 6 pcs.
Please specify the Cat. No. For example, if the diameter of the drill is 10,2 mm, please indicate as follow.

E.g., **MDW 1020 GS 2/4,** ACX70 (Grade)

- **MDW**: SUPER MULTI-DRILLs
- **1020**: Drill diameter **10,2** mm
- **GS**: **GS** type MULTI-DRILLs
- **2/4**: Drilling depth (The ratio to ØD): –2 / –4

General Features

The flat MultiDrill MDF type is a solid carbide drill that can be used for various purposes including high-efficiency spot facing and drilling in inclined and curved surfaces.

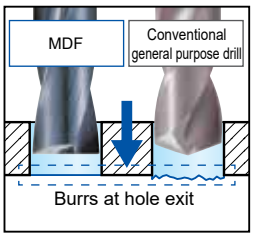

Advantages

- Can be used in a variety of drilling applications thanks to its point angle of 180°
  Applicable to high-efficiency spot facing, drilling in non-horizontal surfaces such as inclined and cylindrical surfaces and interrupted drilling. It also reduces burrs at hole exits.
- Improved machining stability
  Achieves high rigidity by employing RS THINNING, which ensures web thickness on the bottom face.
- Excellent chip evacuation performance
  Achieves excellent chip evacuation thanks to its wide chip pocket and high-quality rake face shape.
- Excellent cutting edge strength
  Achieves excellent cutting edge strength thanks to optimized cutting edge design.
- Expanded lineup of long type
  An expanded lineup of long type drills with diameters between Ø 3,0 and Ø 20,0 mm that are capable of drilling with an overhang length up to L/D = 10.
- Expanded lineup of types with oil hole
  Supports internal coolant. For deeper drilling (3D, 5D).

Improves drilling stability by ensuring web thickness.

Reduction of Burrs at Hole Exit

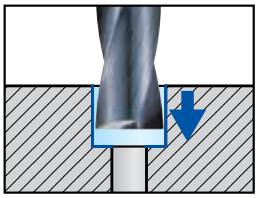

Work Material: 15CrMo5
Drill: MDF0500S2D (Ø 5,0 mm, 2D)
Cutting Conditions: v_c = 65 m/min, f = 0,12 mm/rev
H = 10 mm, 150 holes, wet
Equipment: Vertical machining center

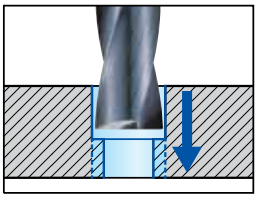

Reduces exit burrs by more than half compared to general-purpose drills

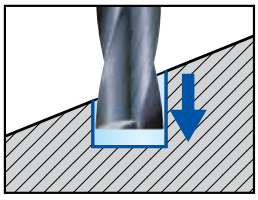

Burr height: 0,18 mm
Flat MultiDrill MDF type

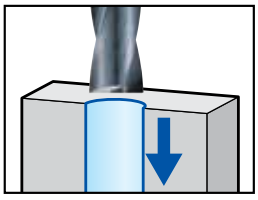

Burr height: 0,44 mm
Conventional general type

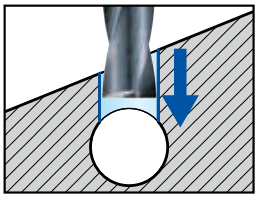

Applications

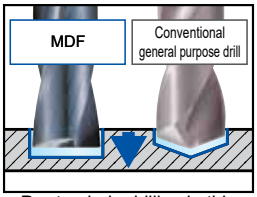

High-efficient spot facing

Hole expansion drilling

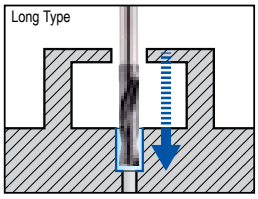

Drilling in non-horizontal surfaces (such as inclined and cylindrical)

Interrupted drilling

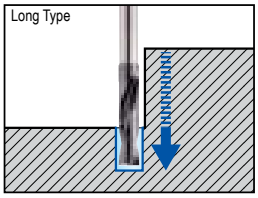

Cross drilling

Pre-tap hole drilling in thin sheets

Deep spot facing

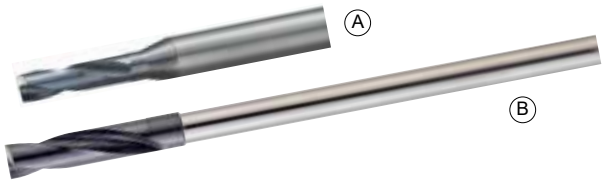

Avoiding interference with work materials

Flat MultiDrill
MDF Type

Long Type (L2D)

For flat base drilling in long overhang conditions, hole expansion, burr prevention.
For deep flat base drilling and to avoid interference with workpiece.
Drilling that uses the long shank type requires a guide hole of the same diameter or a centering hole larger than the tool diameter.

Two types
Ⓐ ØDC < 6 mm Stepped Shank Products
Ⓑ ØDC ≥ 6 mm Relief Shank Products

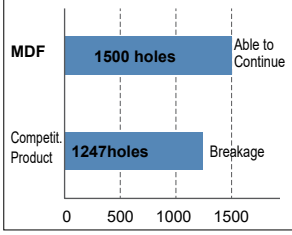

With Oil Hole (H3D Type / H5D Type)

Support for internal coolant allows for deeper flat hole drilling.
Drilling that uses oil hole L/D = 5 requires a guide hole of the same diameter or a centering hole larger than the tool diameter.

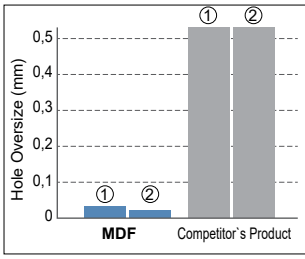

Deep Spot Facing

Tool: MDF0600H5D

Long Overhang Spot Facing

Tool: MDF0600H3D
Work Material: C50,
Cutting Conditions: v_c = 90 m/min,
f = 0,1 mm/rev
H = 18mm (3D)
Internal Coolant
Overhang 35 mm

Drilling that uses this tool requires a guide hole of the same diameter or a centering hole larger than the tool diameter.

■ Recommended Cutting Conditions

● MDF S2D Type

1. The recommended hole depth is 2 x DC. The depth shall be the depth from the highest point of the hole when drilling inclined surfaces.
2. The recommended cutting conditions are those for drilling in flat horizontal surfaces.
3. Adjust the feed rate according to the inclination angle when drilling in an inclined surface.
3.1 Set the feed rate at ≤ 70% when the inclination angle is ≤ 30°
3.2 Set the feed rate at ≤ 50% when the inclination angle is:> 30°
4. This product is a drilling tool. Do not use it for traversing or helical milling

● MDF L2D Type, Long Type

1. Drilling that uses this tool requires a guide hole of the same diameter.
2. The cutting conditions are the recommended conditions with a guide hole.
3. The recommended hole depth is 5 x DC. The depth is measured from the highest point of the hole on drilling in inclined surfaces.
4. This product is a drilling tool. Do not use it for traversing or helical milling.

■ Recommended Cutting Conditions

● MDF H3D Type with Oil Hole

1. The recommended hole depth is 3 x DC. The depth is measured from the highest point of the hole on drilling in inclined surfaces.
2. The recommended cutting conditions are those for drilling on flat horizontal surfaces.
3. Adjust the feed rate according to the inclination angle when drilling in an inclined surface.
3.1 Set the feed rate at ≤ 70 % when the inclination angle is ≤ 30°.
3.2 Set the feed rate at ≤ 50 % when the inclination angle is > 30°.
4. This product is a drilling tool. Do not use it for traversing or helical milling.
5. A guide hole of the same diameter is recommended when drilling stainless steel.

General Features

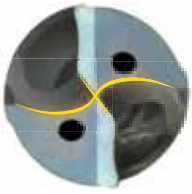

Super MultiDrill XHGS series is a next-generation drill for deep hole drilling, features stable chip control and improved strength to further enhance efficiency of deep hole drilling.

Characteristics and Applications

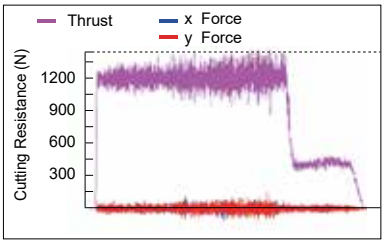

Low Cutting Resistance

The application of a new special thinning shape „RX thinning“ reduces cutting resistance during high efficiency drilling.

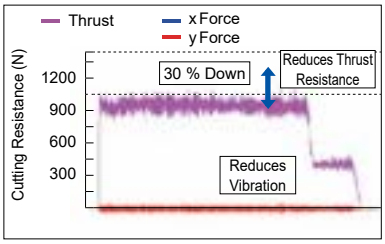

RX THINNING

Conventional Drill

XHGS Series

Work Material: C45
Tools: MDW050XHT20 (conventional), MDW0500XHGS20 (Ø 5,0 mm, 20D)
Cutting Cond.: v_c = 80 m/min, f = 0,35 mm/rev, (⇨ at the time of entry penetration f = 0,08 mm/rev), H = 90 mm
Coolant: MQL

Chip Control

New groove shape „J flute“ with improved chip control stability when drilling deep holes.

J-flute

Improved chip evacuation makes it possible to reduce spindle load fluctuation, ensuring stable, long tool life.

Consistant Chips

XHGS Series

Conv. Drill

f = 0,35 mm/rev | f = 0,40 mm/rev | f = 0,45 mm/rev

Work Material: C45
Tools: MDW050XHT20 (conventional), MDW0500XHGS20 (Ø 5,0 mm, 20D)
Cutting Cond.: v_c = 80 m/min, H = 90 mm
Coolant: MQL

High Precision & Stability

The XHGS series provides excellent guide performance due to the unique design when compared to the conventional drill.

Note: Use lower speed when using MQL coolant and higher speed when using internal coolant. Vc: Cutting speed (m/min), f: Feed Rate (mm/rev)

Recommended Drilling Method

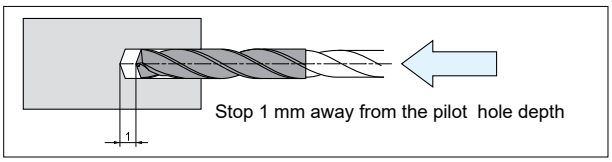

1. Drill a pilot hole using the dedicated PHT

Select the same nominal diameter for the dedicated pilot hole drill PHT type as the deep hole drill XHGS type.
(The pilot drill diameter is designed +0,02 mm to +0,05 mm larger than the long drill diameter)

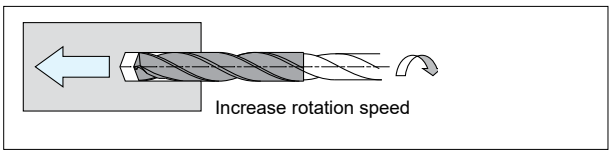

2. Enter the pilot hole at reduced cutting data

Rotation speed: 500 min^{-1}
Feed rate: 1000 to 2000 mm/min

Important:
DO NOT enter pilot hole at higher cutting data, this will cause damage to the drill.

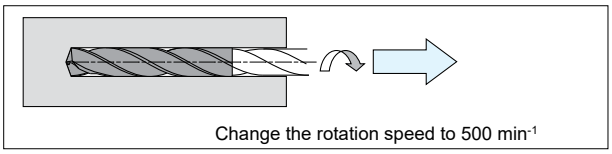

3. Increase rotation speed until the set cutting speed is reached, and start normal drilling operation

When using a NC machine, only begin drilling operation once full rotation speed is reached.

4. After drilling rotation speed is reduced and the drill is retracted from the work material

Rotation speed: 500 min^{-1}
Feed rate: 1.000 to 2.000 mm/min

Retracting a drill from the work material at a high rotation speed is dangerous as doing so may result in breakage due to run-out.

5. Other Notes

A flat base should be prepared when the surface for the pilot tool is slanted. Spot face using:

☑ 
MultiDrill MDF type

☑ 
Flat endmill

When the deep hole drill exits through an angle surface, decrease the feed rate to f = 0,05 mm/rev just before drilling through.

Coolant

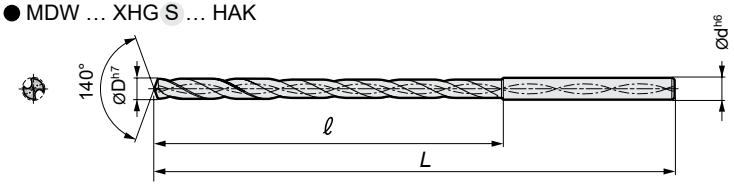

1. Internal coolant supply

Use suitable coolant / emulsion
Pump pressure: Steel: 1,5 to 2,0 MPa (cooling effect increases at higher pressure, affecting chips/wear)
Cast iron & aluminium alloy: 4,0 to 6,0 MPa (priority on cooling)

2. Internal MQL

Airpressure: 0,5 MPa or higher
Discharge volume: It is recommended to set the maximum discharge volume possible on the machine.
*Consult the manufacturer before using with aluminium alloy.

■ How to Order

Non stock items – minimum order 6 pieces
Always specify the catalogue number and drill diameter as shown
- eg drill diameter 5,0 mm = MDW 050

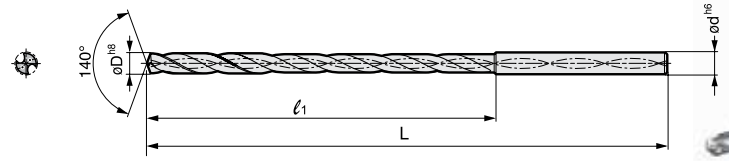

E.g., **MDW 050 X H G S 30 HAK ACX70** (Grade)

- Super MULTI-DRILL
- DC = 5,0 mm
- Extra long type
- With spiral coolant holes
- Special shape (RX thinning) + J flute
- Cutting edges for steel with double margin
- Drilling depth (L/D ratio)
- Shank type to DIN6535

MDW ... NHGS Type

DLC (Diamond Like Carbon) Coated Multi-Drills

With Coolant Holes (3D/5D/10D)

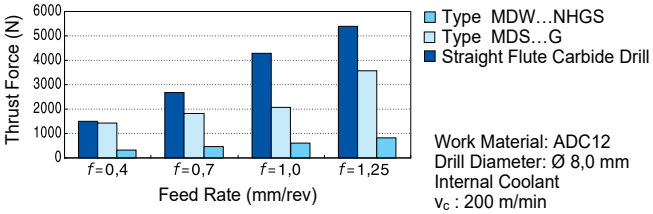

Characteristics

- **High efficiency drilling**
  AURORA COAT and strong helix design reduces cutting forces and improves edge sharpness.
- **Precision drilling**
  Special cutting edge design improves hole precision and quality.
- **Longer tool life**
  With AURORA COAT coupled with the cutting edge design, long and stable tool life can be achieved.
- **Deep hole (L/D = 20) drilling**
  Drills for deep hole drilling can be custom-made.
  Production range: Ø 3,0–16,0 mm
  total length: 50 times drill diameter (max. 290 mm)

Applicable Work Materials

- Aluminium Die Casting
- Aluminium Alloy
- Aluminium Alloy Casting
- Brass Casting
- Bronze Casting

■ How to Order

Non-Stock Items will be required minimum order quantity for 6 pcs.
Please specify the Cat. No.
For example, if the diameter of the drill is 10,3 mm and the ratio to øD is 5, please indicate as follow.

E.g.,

MDW 1030 NHGS 5 , DL1300 (Grade)

- MDW: Super MULTI-DRILL
- 1030: DC = 10,3 mm
- H: Applicable work materials
- GS: with spiral coolant holes
- 5: Drilling depth (The ratio to øD): –3 / –**5** / –10
- NHGS: NHGS type Multi-Drills

Micro Long Drills
MLDH ....L/P Type

General Features

Micro Long Drills are oil-hole drills for high efficiency drilling that were developed for drilling deep, small-diameter holes. These next-generation, small-diameter hole drills feature improved strength - often a problem area with small-diameter drills.

Characteristics and Applications

● Deep-hole drilling
New groove shape ensures good drill rigidity and chip evacuation.
High efficiency drilling to depths of over 20 x drill diameter at over v_f = 500 mm/min (drill diameter 1,3 mm, X12CrS13 equivalent).
Optimal thinning and edge balance for stable chip control.

● Long tool life
Special coating provides long tool life with a wide variety of work materials.
Improved chip evacuation makes it possible to reduce spindle load fluctuation, ensuring stable tool life.

SUMIDIA Coated Drills
SDC Type

General Features

SUMIDIA Coated SDC type drills for Carbon Fibre Reinforced Plastic (CFRP) employ Sumitomo Electric Hardmetal's proprietary multi-step point angle.
Combined with a diamond coating, this technology improves the quality of machined surfaces and extends tool life.

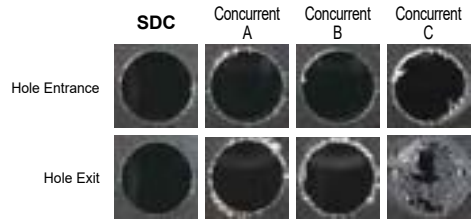

Characteristics and Applications

- Excellent drilled-hole quality
  - Sharp cutting edge shape reduces delamination of fibre layers and burrs.
  - Continuously changing point angle disperses load placed on cutting edge and prevents breakage.
- Long tool life
  - Use of high-strength diamond coating with excellent adhesion delivers high quality and long tool life.

Performance

Comparison of Machined Surface Finish

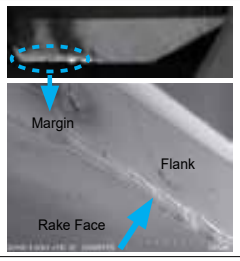

Excellent Machined Face Quality
(Prevents Delamination And Burrs)

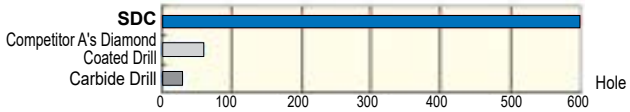

Tool:	SUMIDIA coated drill SDC type, Ø 6,375 Competitor A B C´s drill Ø 6,35 & Ø 6,5
Work Material:	CFRP
Cutting Conditions:	n = 6.000 rpm, f=0,1 mm/rev, a_p =28 mm (Through) Dry

Tool Life Comparison

Effects of Diamond Coating

SDC type (After drilling 600 holes)	Competitor's product (After drilling 50 holes)
	
No delamination Low flank wear	More delamination from cutting edge to flank

Stable diamond layer adhesion prevents delamination.
Excellent wear resistance enables high-quality drilling with long tool life.

SMD Type

General Features

Fast accurate and ideal for drilling steels, this newly developed drill from SUMITOMO gives similar hole accuracy to that of regrindable drills renowned within the industry as being the ultimate hole making tool.

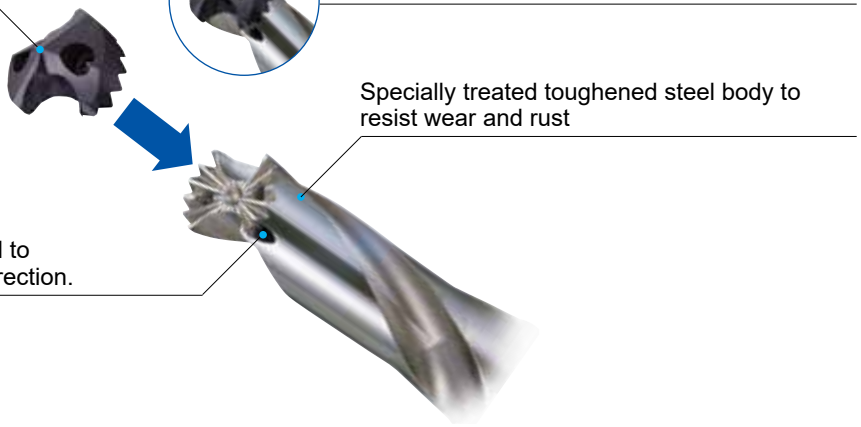

Advantages

- Available in diameters ranging from 12,0–42,5 mm
- Drilling Depths 1,5–12 x Diameter
- Optimised heat dissipation via precisely located coolant holes
- Maximised rigidity from newly developed clamping system
- High performance drilling of precision holes from solid
- 3 different types of head for general and smooth cutting (MTL type, MEL type) and new MFS type for drilling in non-flat surfaces.

The newly developed tungsten carbide substrate with it's ultra hard smooth coating proved that against competition users can expect to see holes with tolerances similar to that of reaming and tool life almost doubled.

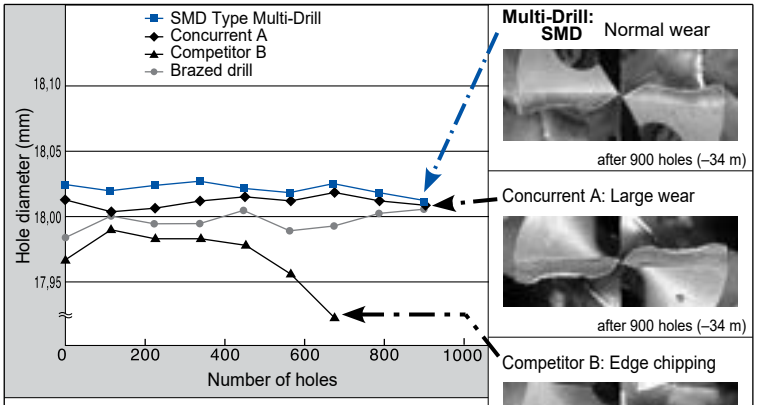

Edge security comes from replaceable drilling heads bolted to fixed radial serrations which provide a rigid and precise clamping platform.

Specially treated toughened steel body to resist wear and rust

Through coolant holes positioned to optimise coolant pressure and direction.

Drilling Precision

Multi-Drill: SMD Normal wear

after 900 holes (–34 m)

Concurrent A: Large wear

after 900 holes (–34 m)

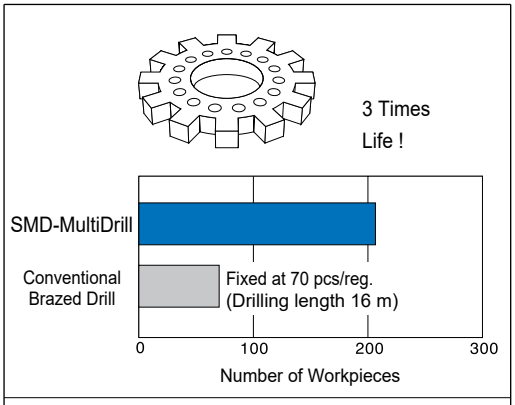

Competitor B: Edge chipping

after 670 holes (–25 m)

Drill: Ø 18,0 mm
Work material: C50
Conditions: v_c = 70 m/min, f = 0,25 mm/rev
a_p = 38 mm (through), Water soluble

Application Example

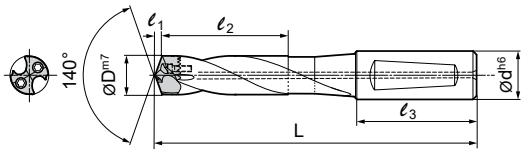

Work material: 34CrMo4 (H_B235–302)
Drill: Ø 18,0 mm
Conditions: v_c = 70 m/min, f = 0,25 mm/rev
a_p = 38 mm (through), Water soluble

SMDT... MEL Type

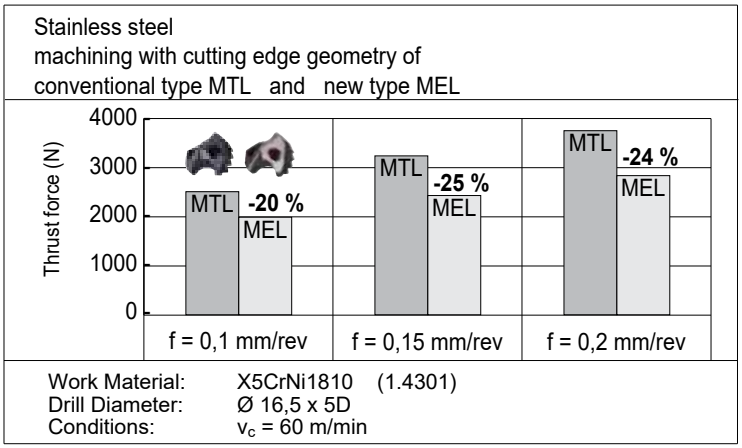

Advantages

- Replaceable and regrindable drill head
- New design decreases cutting force by 25 %
- Ideal for stainless steels - soft steels etc
- Excellent tool life when drilling cast iron
- Improves drilling performance on low powered machines
- Increases productivity

MFS Type Ideal for Drilling in Non-Flat Surfaces and Less Burr

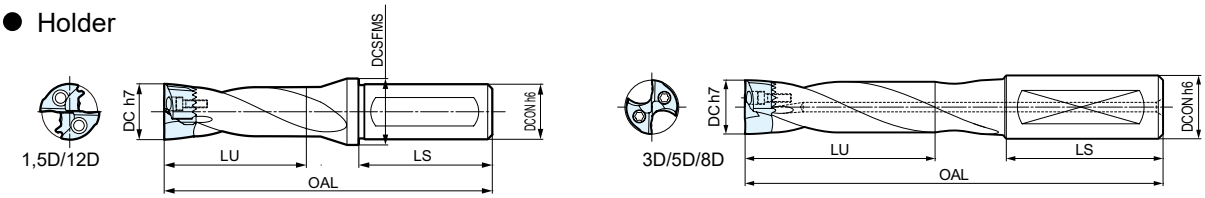

Advantages

- **Various Drilling Operations Thanks to a Point Angle of 180°**
  Applicable to high-efficiency spot facing, drilling in non-flat surfaces such as inclined and cylindrical surfaces and interrupted drilling.
  Also reduces burrs st the hole exit.

- **Improves Machining Stability**
  Achieves high rigidity by employing RS Thinning, which ensures thick web at the bottom.

Note: The recommended hole depth is 2 x DC. The depth is measured from the highest point of the hole when drilling on inclined surfaces. The recommended cutting conditions above are for drilling on flat horizontal surfaces.
Adjust the feed rate according to the inclination angle when drilling on an inclined surface. Set the feed rate at 70 % ot lower when inclination angle is 30° or less. Set the feed rate at 50 % or lower when the inclination angle is larger than 30°. This product is a drilling tool. Do not use it for traverse or helical milling.

(*) Inquire about drills specifically for aluminum alloy.

WDX Type

General Features

The SumiDrill WDX type has excellent cutting balance that provides stable hole drilling on a wide range of work materials from general steel to stainless steel and aluminium alloy.
Available in four original chipbreaker styles, the inserts feature improved chip control and reduced cutting force for use in low rigidity contexts.

Series Configuration

Depth of Machined Hole	Holder Diameter (mm)
2D	Ø 13,0 – Ø 68,0
3D	Ø 13,0 – Ø 68,0
4D	Ø 13,0 – Ø 63,0
5D	Ø 13,0 – Ø 55,0

Features and Applications

Design

Cutting force during drilling is balanced between central insert and peripheral insert. The relative position of each insert is optimised to provide stable drilling.

Excellent Chip Control

The chip evacuation direction can be controlled with the chip control groove at the centre of the breaker, enabling good chip control.

Versatile Tool for a Variety of Machining Applications

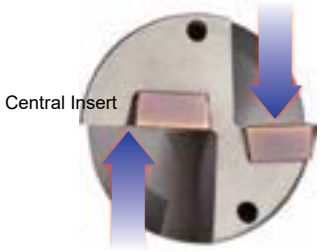

Select among four types of breakers for different applications, allowing optimal drilling for a variety of work materials and conditions. Suitable for a wide range of applications including hole expansion, spot facing, external turning and internal boring.

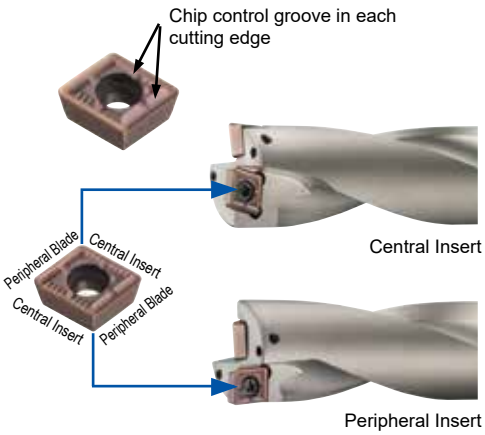

Economical Four-Cornered Insert

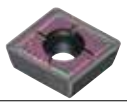

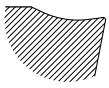

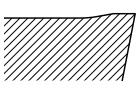

Inserts can be used in either central or peropheral positions with two corners for each position - a total of four corners.

Design

Cutting force of central insert = that periphal insert

2nd Recommendation (P)

P — For low feed with chip control

L ACP300

For drilling of St 42-3, 15,CrMo5, 20CrMo5, etc.

High speed and low feed is recommended if there are issues with chip control.

Decrease the feed if vibration occurs due to burnt chips.

P — General Purpose

G ACP100

For drilling of general steel and alloy steel, when prone to significantly large flank wear.

P — For low feed with chip control

L ACP100

For low-feed conditions.

P — Strong Edge Type

H ACP300

For drilling with interruptions (entry/through) due to slanted entry, reduce the feed rate in the interrupted area (around f = 0,05).

For insufficient cutting edge strength due to drilling of hardened steel (heat treated).

P Improved chip control (low carbon steel, etc.)

P Insufficient wear resistance

P Initial chipping measures (interruption, high hardness, etc.)

1st Recommendation (P M K N)

General Purpose — G

For general steel and alloy steel drilling
P ACP300

For cast iron drilling
K ACK300

For non-ferrous metal drilling
N DL1500

For stainless steel drilling
M ACM300

Dedicated for stainless steel — **M**

K insufficient wear resistance (high-speed machining)

K Initial chipping measures (interruption, high feed, etc.)

M Lack of chip evacuation (extension)

2nd Recommendation (K M)

K — General Purpose

G ACP100

When heavy flank wear occurs in cast iron drilling.

To limit wear in high-speed, low to medium feed conditions.

K — Strong Edge Type

H ACK300

When interrupted drilling is performed due to slanted entry, etc. as with steel drilling.

For machining of St44-2, 18CrMo4, 20CrMo4

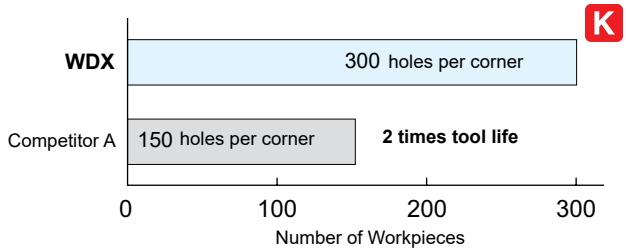

M — General Purpose

G ACP300

When chips extend and clog.

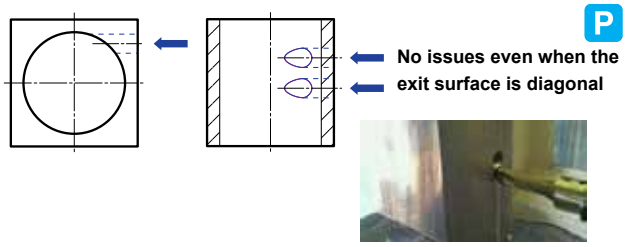

ACP100 is the first recommendation for steel with a hardness of 200HB or greater or for high-speed drilling of steel.

Application Examples

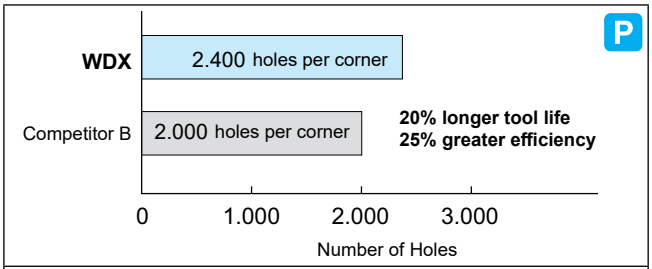

Work Material: Machine component (GGG-40.3)
Holder: WDX205D3S25
Insert: WDXT063006 G (ACK300)
Cutting Data: v_c = 122 m/min, f = 0,15 mm/rev, H = 33 mm, through, wet

Significant increase in tool life; twice that conventional tools.
Stable cutting with minimal cutting force.

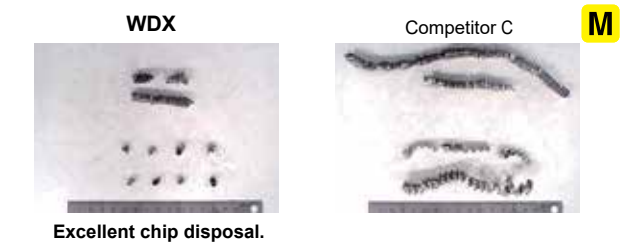

Work Material: Plate (C15)
Holder: WDX430D3S40
Insert: WDXT125012 H (ACP300)
Cutting Data: v_c = 136 m/min, f = 0,15 mm/rev, H = 60+50 mm (semicircle area), through, wet

Enables drilling even in unstable conditions (interrupted cutting at deepest point)
Quieter cutting than conventional tools.

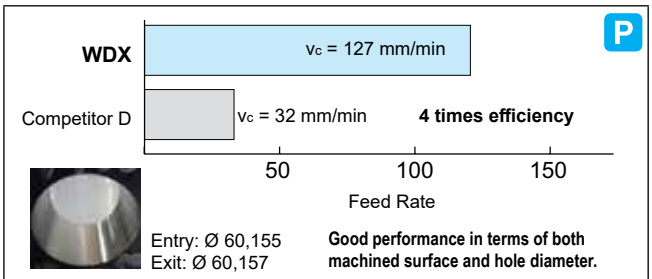

Work Material: Machine component (42CrMo4)
Holder: WDX200D3S25
Insert: WDXT063006 G (ACP300)
Cutting Data: v_c = 157 m/min, f = 0,19 mm/rev, H = 19 mm, through, wet
Competitor B: v_c = 157 m/min, f = 0,15 mm/rev, H = 19 mm, through, wet

Good chip control even in high-efficiency conditions. Good stability with low vibration during cutting. 25% greater efficiency and 20% longer tool life.

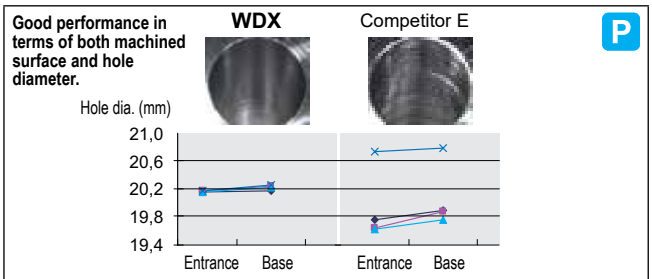

Work Material: Piping parts (X5CrNiS18 10)
Holder: WDX210D3S25
Insert: WDXT063006 M (ACM300)
Cutting Data: v_c = 105 m/min, f = 0,08 mm/rev, H = 34 mm, wet

Improved chip control and better stable machining.

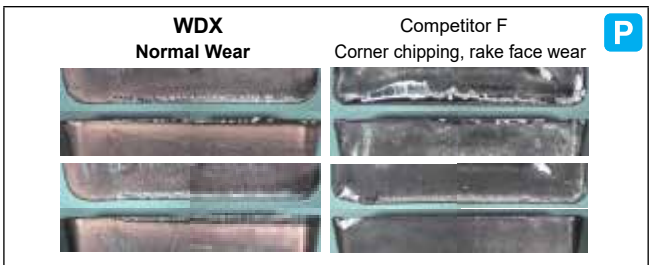

Work Material: Plate (C48)
Holder: WDX600D3S40
Insert: WDXT186012 G (ACP300)
Cutting Data: v_c = 150 m/min, f = 0,16 mm/rev, H = 60 mm, through, wet
Competitor D: v_c = 30 m/min, f = 0,20 mm/rev, H = 60 mm, through, wet

Achieves steady machining even at large diameters.
Achieves 4 times the efficiency of conventional tools.

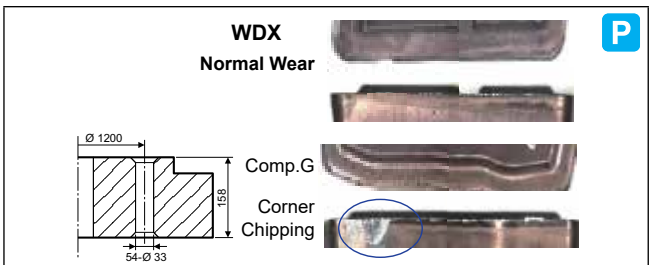

Work Material: Machine component (15CrMo5)
Holder: WDX200D5S25
Insert: WDXT063006 G (ACP300)
Cutting Data: v_c = 185 m/min, f = 0,12 mm/rev, H = 87mm, through, wet

Good machined surface.
Consistent bore diameter.

Work Material: Tractor links (35MnBM)
Holder: WDX205D5S25
Insert: WDXT063006 G (ACP300)
Cutting Data: v_c = 100 m/min, f = 0,11 mm/rev, H = 60 mm, through, wet

Achieves steady machining even at L/D = 5.
Reduces insert chipping and wear for stable tool life.

Work Material: Bearing for wind power generator (equivalent to 42CrMo4)
Holder: WDX330D5S40
Insert: WDXT094008 L (ACP300)
Cutting Data: v_c = 146 m/min, f = 0,10 mm/rev, H = 158 mm, through, wet

Eliminates defects in workpieces caused by insert chipping.

Finishing is easy because the hole bottom is almost flat.

Applications for Lathes

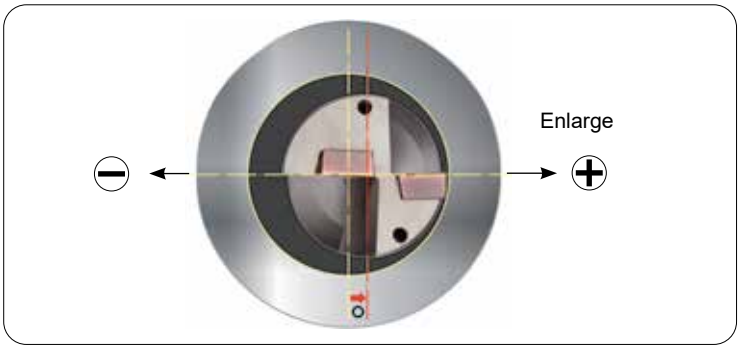

Setting Instruction

Ensure the face of the drill flange is hard against the face of the tool holder.
Axis offset: Difference between workpiece axis and the Y-axis.
Align the centreline of the drill to the centreline of the lathes Y axis.

Drilling Over Holes

Offset the lathes X axis within the maximum amount stated in the table.

Eccentric Sleeve **WAS** Type

The Eccentric Sleeve WAS Type, exclusively designed for "SumiDrill" WDX Type, provides up to ± 0,3 mm of hole size adjustment.

Diameter Adjustment

Note 1: The dial is for reference purposes. Always measure the actual drilling diameter and adjust accordingly.
Note 2: Not usable with collet chuck type holders. Only use with a side-locking holder like Weldon.

PDL Type / PCT Type

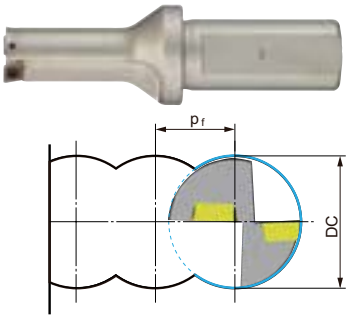

Description

The tool cuts in the Z axis direction where tool rigidity is highest, allowing high efficiency roughing for aeronautic components and dies with long tool overhang must be used to machine deep holes and pockets.

Characteristics

- The flat cutting edge design produces near-flat bottom profiles to reduce depth of cut variation during finishing.
- All sizes come with an air hole for supplying coolant internally to improve chip evacuation.
- Durable body with special surface treatment offers improved tool life and reliability.
- The tools use SumiDrill WDX type inserts for handling a wide range of work materials, from steel to non-ferrous metals and exotic alloys.

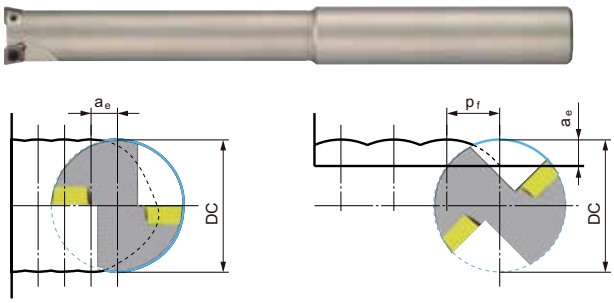

- The PDL type has a central insert making it possible to make radial cuts beyond the tool's radius, pitch feed cutting, and drilling. (Pocket milling, etc.)

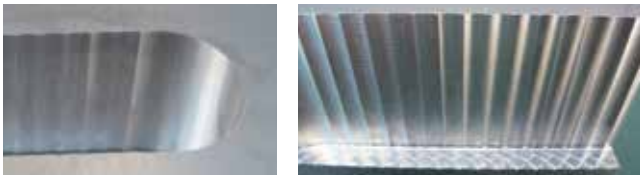

Keep the value of P_f for PDL type tools to less than 70 % of the tool diameter (DC).

- Although the PCT type has limited radial cutting ability, the tool has many effective teeth enabling it to perform high feed cutting. (Medium finishing of corners, hole expansion, deep grooving, etc.)

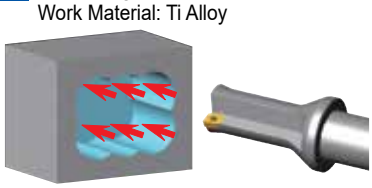

Keep the value of P_f for PCT type tools to less than 50 % of the tool diameter (DC).
For a_e refer to the dimension under "a_e max" in the stock / dimensions tables titled "Holders Max, Depth: 3D/5D".

Application examples

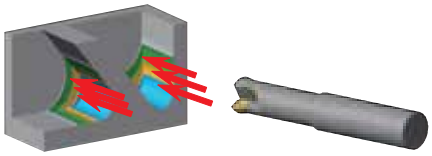

PDL Pocketing
Work Material: Ti Alloy

Tool: PDL400D2S40 (Ø 40)
Insert: WDXT125012-G
Grade: ACK300

Cutting Conditions:
v_c = 40 m/min
f = 0,07 mm/rev
(v_f = 22,3 mm/min)
P_f = 25 mm

PCT Corner Finishing
Work Material: Ti Alloy

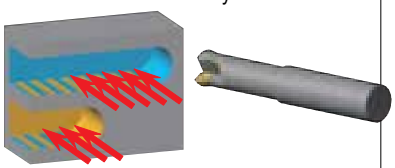

Tool:
PCT320D3S32 (Ø 32)
PCT250D3S25 (Ø 25)
PCT200D3S20 (Ø 20)
Grade: ACK300

Insert:
WDXT094008-G
WDXT073506-G
WDXT063006-G

Cutting Conditions:
v_c = 50 m/min
f_t = 0,08 mm/tooth
(v_f = 80–127 mm/min)
a_e = 3,2–6,5 mm

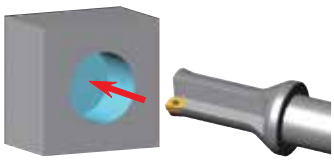

PCT Grooving
Work Material: Ti Alloy

Tool: PCT320D5S32 (Ø 32)
Insert: WDXT094008-G
Grade: ACK300

Cutting Conditions:
v_c = 40 m/min
f_t = 0,07 mm/tooth
(v_f = 56 mm/min)
P_f = 5,0 mm

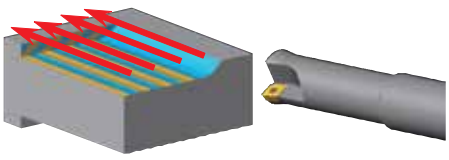

PDL Drilling
Work Material: X4 CrNiMo 17 12 2

Tool: PDL200D3S25 (Ø 20)
Insert: WDXT063006-G
Grade: ACP300

Cutting Conditions:
v_c = 180 m/min
f = 0,10 mm/rev
(v_f = 286 mm/min)
DC = 20 mm

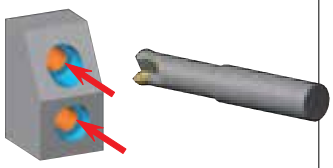

PCT Aeronautic Components
Work Material: X5 CrNi 18 10

Tool: PCT320D3S32 (Ø 32)
Insert: WDXT094008-G
Grade: ACP300

Cutting Conditions:
v_c = 180 m/min
f_t = 0,15 mm/tooth
(v_f = 537 mm/min)
a_e = 7,0 mm, P_f = 5,0 mm

PCT Machine Components
Work Material: 34 Cr Ni 4

Tool: PCT200D5S20 (Ø 20)
Insert: WDXT063006-G
Grade: ACK300

Cutting Conditions:
v_c = 150 m/min
f_t = 0,15 mm/tooth
(v_f = 716 mm/min)
a_e = 3,5 mm

New generation Sumiboron inserts – an even better way to machine hardened steels

General

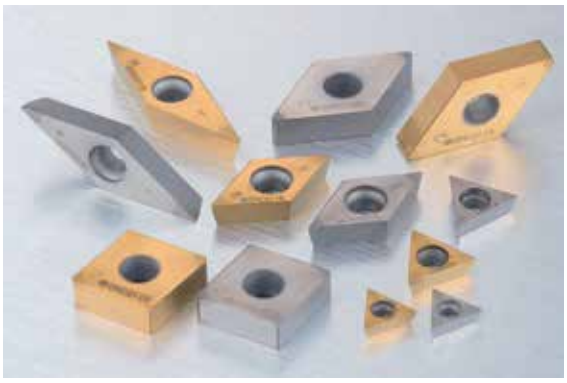

Building on its global success machining hardened steels with Sumiboron inserts the addition of heat and wear resistant coatings to a variety of tough new CBN substrates has resulted in a new generation of high performance grades. With economy in mind the new inserts are multi cornered.
Choose the coated insert suitable for your application and take your hard part machining operations to the new industry standard.
The sintered CBN tool SUMIBORON is mainly used for the machining of ferrous metals due to its low chemical reactivity with iron. There are 4 different classifications of SUMIBORON as follows:

Classifications / Applications

Characteristics

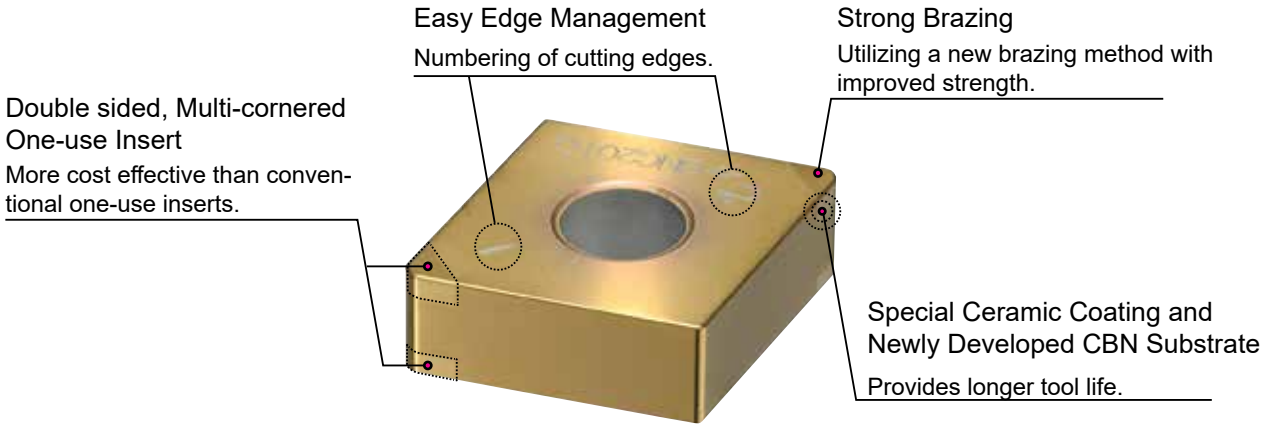

New Coated SUMIBORON Series achieving
- higher speed
- higher efficiency and
- higher precision

General Features

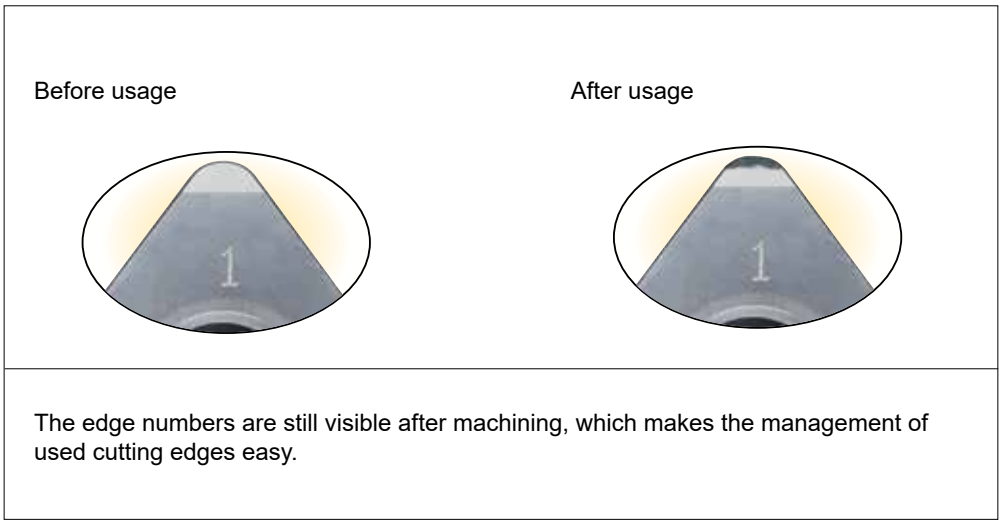

Using a high heat resistant and tough CBN substrate coupled with a special ceramic coating, this series caters to a wide variety of applications with improved precision and longer tool life as compared to conventional CBN.

There is a comprehensive lineup of economical and easy-to-use insert selection, such as the cost effective double-sided, multi-cornered, one-use type inserts.

Features

Cutting Edge Management

The edge numbers are still visible after machining, which makes the management of used cutting edges easy.

Grade Guidance

H Hardened Steel Machining

Advantages of Using CBN

In terms of cost investment, it is much lower in machine cost and overhead cost due to the fact that a CNC lathe is cheaper than a grinding machine.
As for the quality of finish, inserts can machine different profiles and the finishing is also commendable as compared to grinding.
Environmentally, sludge treatment for grinding is a hazard to the environment but for turning, the chips can be collected and recycled.

Sintered Component Machining

Advantages

SUMIBORON has much smaller edge wear than cemented carbide or cermet. It also has better wear resistance and can form a shape edge easily. SUMIBORON is able to prevent burrs and chipping on the edges of the workpiece, achieving good machined precision and surface roughness.

Hard Facing Alloy Machining

Advantages

SUMIBORON enables the machining of high-hardness facing alloys that were previously difficult to machine with conventional tools, drastically improving machining efficiency. The first recommended grade is BN7000, followed by BNS8125.

Cutting Performance

Work Material:	Colmomoy No. 6 (Ni-based self-fluxing alloy)
Insert:	SNGN090308
Cutting Data:	f = 0,1 mm/rev, a_p = 0,2 mm dry

BN7000 has a long tool life and minimal wear with high speed cutting.

Recommended Cutting Conditions

Co-based self-fluxing alloy	Stellite		0,05–0,2	0,1–1,0

Heat Resistant Alloy Machining

Advantages

SUMIBORON provides long tool life in the finishing of heat-resistant alloys.

Recommended Grades

SUMIBORON is best suited for finishing of heat-resistant steel.

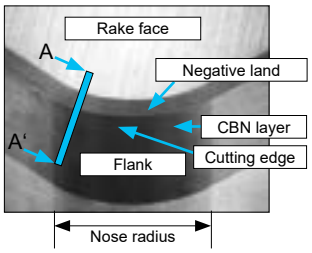

Recommended Cutting Conditions

Work Material		Recommended Cutting Conditions		
Category	Material	Cutting Speed v_c (m/min) 50 100 150 200	Feed Rate f (mm/rev)	Depth of Cut a_p (mm)

Sumiboron Inserts and Edge Preparation

All SUMIBORON inserts are enhanced with the optimum cutting edge preparation for various grades and geometries (shown on the rigth).
This is to avoid cutting edge fracture caused by the heavy loads generated during the machining of high hardness materials such as Hardened Steel.
As the pioneer of CBN tools „SUMIBORON“, various selection of grades and edge preparation combinations is our strong point for Hardened Steel machining.

Insert Types and Cutting Edge Geometries

Multi Cornered One-Use Type Inserts

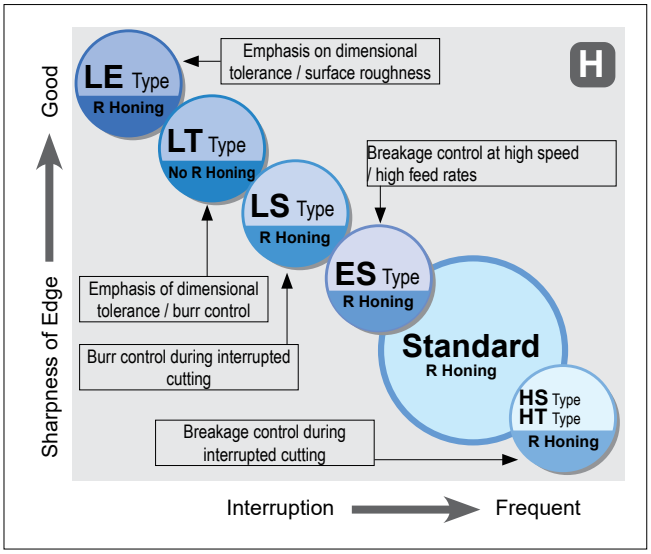

■ Characteristics

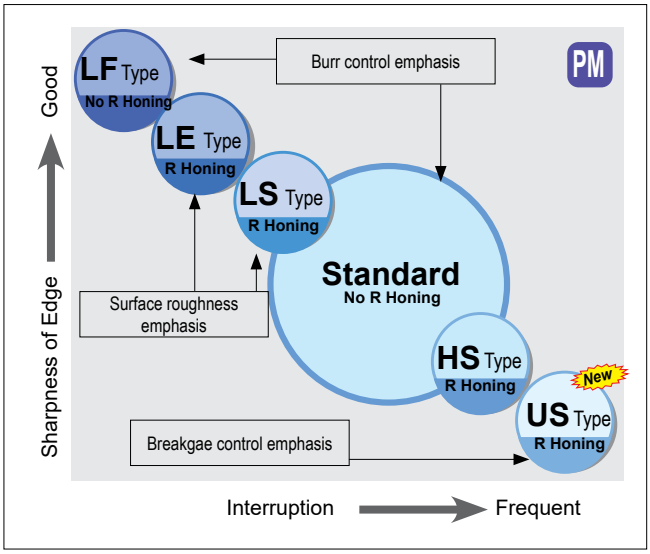

- One-use type inserts improve machining efficiency by using each cutting edge to its full potential following the numbering system on each cutting edge then throwing the insert away.
- Multi cornered inserts have a single piece of Sumiboron mounted on every useable corner. Single sided inserts use the top corners whilst double sided inserts use both top and bottom corners. Diamond shaped inserts have 4 corners and triangular inserts have 6 corners.
- A variety of Sumiboron coated grades readily replace expensive grinding operations for high precision tolerances outstanding surface finish, heavy interrupted cutting and efficient cost effective machining of hardened parts.

Sintered Alloy Machining

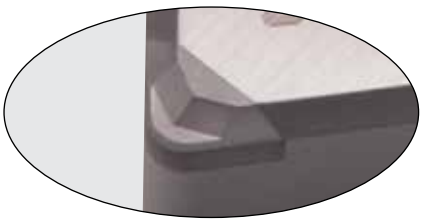

One-Use Wiper Insert

■ Characteristics

- New lineup includes:
  WG Type ⇨ for low-feed cutting
  WH Type ⇨ for high-feed cutting
- SUMIBORON one-use insert with wiper edge for hardened steel machining
- Excellent surface finish similar to grinding
- Improved efficiency with higher speeds and feeds

Break Master N - FV, N - LV, N - SV

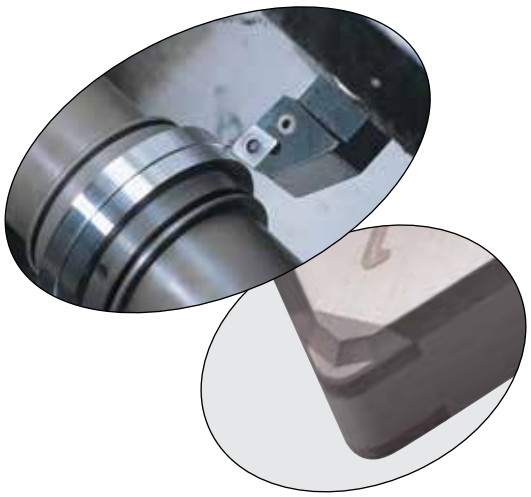

Break Master N-SV Type

■ Characteristics

- N-SV type is perfect for carburised layer removal while N-FV / N-LV types are best suited to finishing of hardened steel.
- First CBN insert to feature an integral chipbreaker
- Ideal for removing carburised layer - can be used on both hardened and unhardened materals.
- Effective chip control solution protects component from swarf damage.

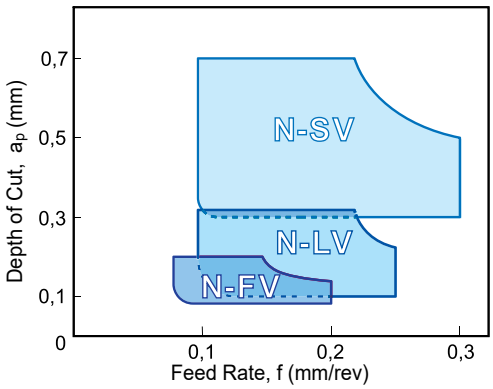

N-FV /N-LV /N-SV

Characteristics

- SUMIBORON one-use insert with chipbreaker.
- N-SV type is perfect for carburised layer removal while N-FV/N-LV types are best suited to finishing of hardened steel.
- Breaker included on the CBN edge, chipbreaking effect can be maintained throughout machining process.
- Unique breaker design can be applied to both hardened and non-hardened parts with effective chip control.

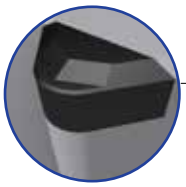

Application Range

N-SV

N-LV

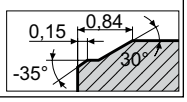

N-FV

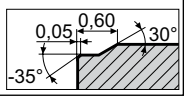

N-SV For Carburised Layer Removal

Ideal for carburised layer removal.

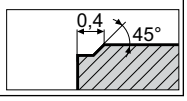

N-LV For Light Cutting

Excellent chip evacuation under conditions with depth of cut at ≤ 0,3 mm.

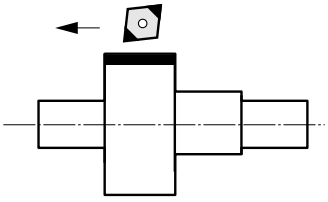

N-FV For Finishing

Excellent chip evacuation under finishing conditions with depth of cut at ≤ 0,2 mm.

Application Examples

External Carburised Layer Removal

No constant stopages or incorrect part dimension problem and the chips are small.

Double the tool life of competitor's CBN

Work material: 42CrMo4, Carburised steel (shaft)
Insert: CNGG 120408 N-SV NC4 (BNC200)
Conditions: v_c = 150 m/min, f = 0,15 mm/rev, a_p = 0,5mm, x 2 passes, wet

Break Master N-SV
Tool life = 200 pcs

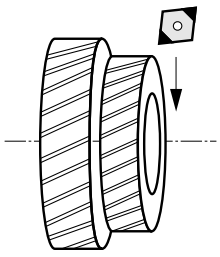

BNC200 (no breaker)
Tool life = 200 pcs

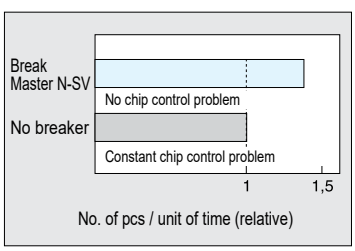

Comp. CBN (no breaker)
Tool life = 100 pcs

Carburised Face Layer Removal

Break Master N-SV type improves chip control with increased productivity until the pre-set tool life.

Work material: 42CrMo4 (HRC30-62)
Insert: CNGG 120408 N-SV NC4 (BNC200)
Conditions: v_c = 140 m/min, f = 0,15 mm/rev, a_p = 0,3 mm, wet

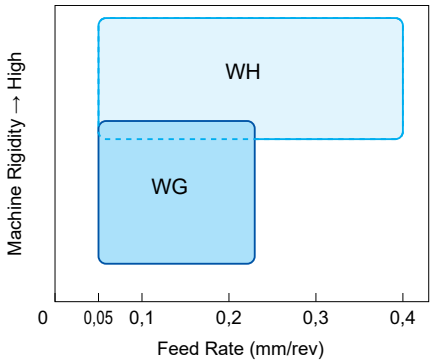

Characteristics

- SUMIBORON one-use insert with wiper edge for hardened steel machining
- Excellent surface finish similar to grinding
- Improved efficiency with higher speeds and feeds
- New lineup includes:
  WG type ⇨ for low-feed cutting
  WH type ⇨ for high-feed cutting

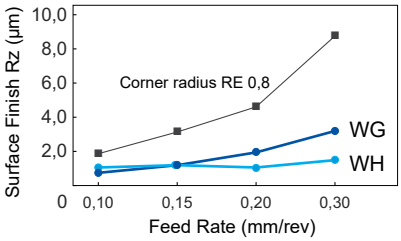

Application Range

WH type:
→ for high-rigidity workpieces and equipment

WG type:
→ for issues of undulation or chatter

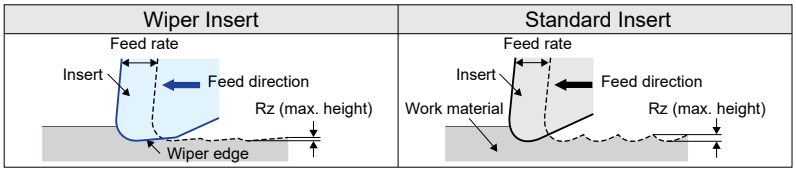

Finished Surface Roughness

The wiper insert offers good finished surface roughness and improved machining efficiency.

Work Material:	15CrMo5 (60 HRC)

Uncoated CBN grades for hardened steel machining

■ General Features

A new uncoated type of SUMIBORON that has a newly developed high-purity ceramic binder.
Both fracture and wear resistance are combined to achieve a stable tool life in a wide variety of hardened steel machining.

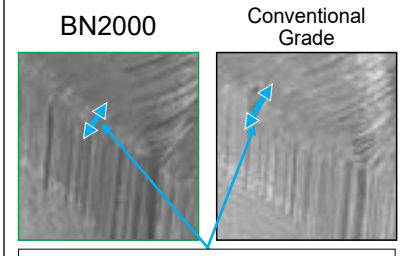

Available in single corner and multi-corner type inserts.

■ Characteristics

● BN1000
- Superior high-speed machining grade with the highest wear resistance of any uncoated SUMIBORON.
  Delivers excellent tool life in continuous cutting to light-interrupted cutting.
- Improved fracture resistance while also emphasizing wear resistance.
  Improved hardness and heat resistance from the high-purity TiCN ceramic binder.

● BN2000
- General purpose grade suitable for typical hardened steel machining applications.
  Provides stable tool life in everything from continuous cutting to light-to-medium interrupted cutting.
- High degrees of both fracture resistance and wear resistance.
  Significant improvements in the performance of both by employing a high-purity ceramic binder.
- Stable surface roughness by increasing sharpness (Figure on right).

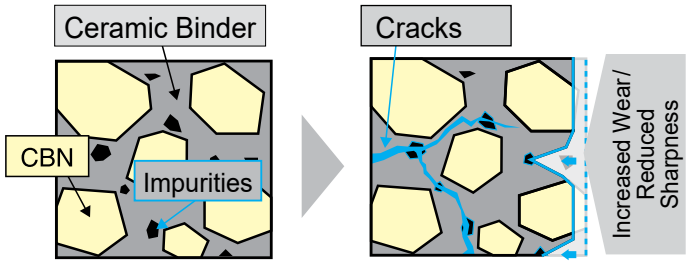

Sharpness Comparison

Compared to conventional grades, small cutting edge roundness

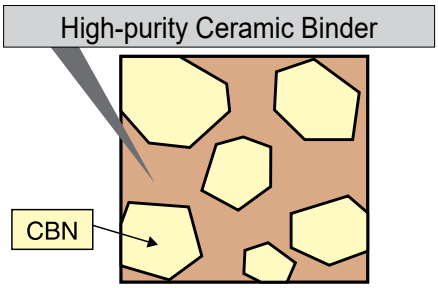

■ Newly Developed High-Purity Ceramic Binder

Conventional Grade

The impurities contained in the ceramic binder for conventional grades cause a weakening in the sintered body and a decrease in heat resistance, which becomes the cause of cracks (chipping) and wear.

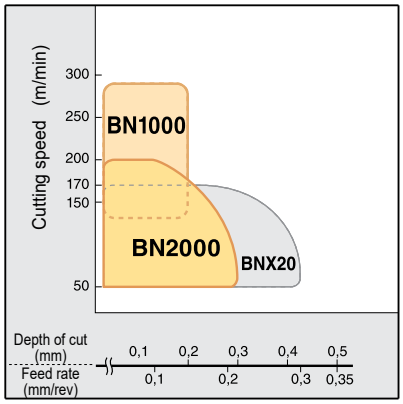

BN1000/BN2000

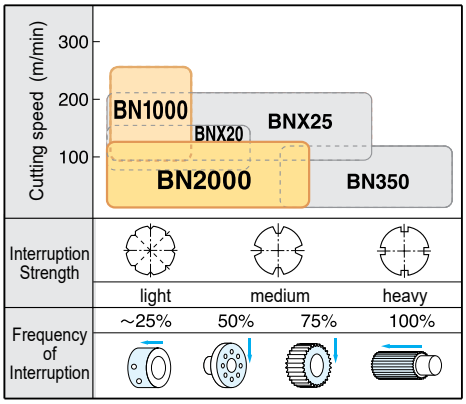

With the newly developed high-purity **ceramic binder**, the BN1000 / BN2000 achieve toughness and improved heat resistance by decreasing impurities to an extreme!

BNC2115/BNC2125/BNC2010/BNC2020

New

General Features

BNC2115/BNC2125 have been added to our coated SUMIBORON series and are our first recommendations for hardened steel machining, for even higher efficiency machining. It's the pinnacle of high accuracy and high efficiency cutting.
In combination with BNC2010/BNC2020, which emphasize stable tool life, they improve productivity in all kinds of hardened steel machining.

Features

BNC2115 New

- The definitive grade in high-accurancy machining
  Realises long tool life with excellent surface roughness and stable machining.
- Further maintains excellent surface roughness
  Maintains excellent surface roughness thanks to a coating with high notch wear resistance and tough CBN substrate.

BNC2125 New

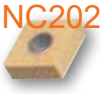

- First recommendation for hardened steel machining
  Superb wear and fracture resistance.
- Achieves long, stable tool life even in high-efficiency and interrupted machining
  Along with a tough CBN substrate, the coating combines wear resistance and toughness to realise stable machining.

BNC2010

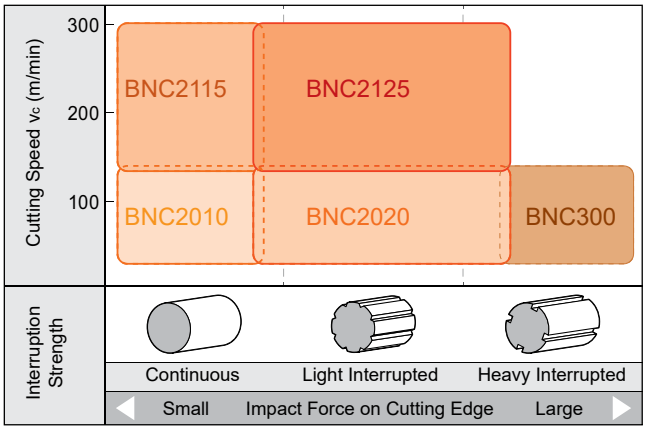

- Grade for high-precision machining with excellent surface roughness and finished surface accuracy
  Grade ideal for high-precision machining, with highly wear-resistant CBN substrate and coating.

BNC2020

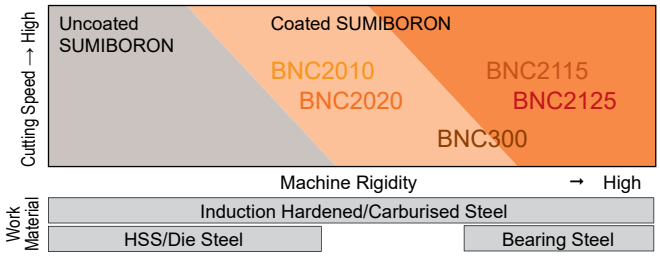

- General-purpose grade suitable for typical hardened steel machining applications
  Achieves further stability in machining of a wide range of hardened steel components.

Application Range

CBN Substrate und Coating Structure

BNC2115

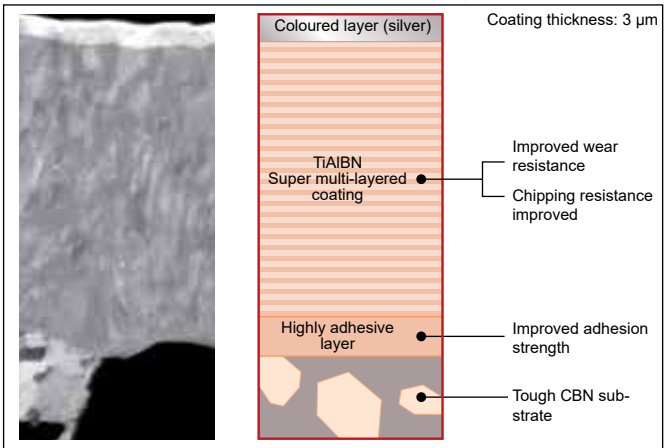

High-Precision Machining
(Medium- to high-speed)

Thick layer of laminated high-strength TiAlSiN super multi-layered coating and highly heat-resistant TiCN coating. Achieves excellent surface fnish quality with application to a tough substrate.

BNC2125

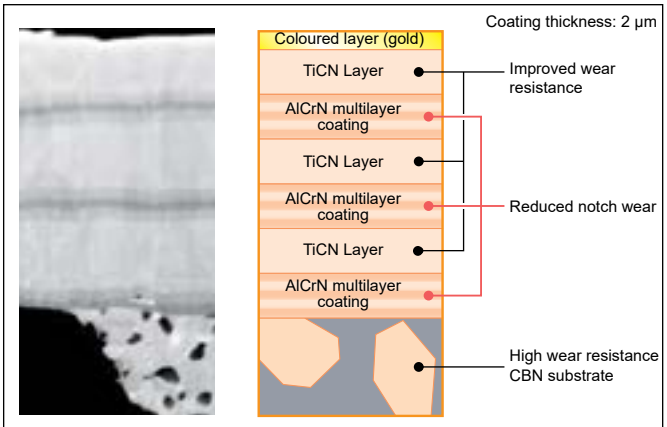

General Machining
(Medium- to high-speed)

Thick layer of super-multilayered ultra-fine TiAlBN coating with high strength and high hardness. High performance in a wide range of cutting through application to a tough substrate.

BNC2010

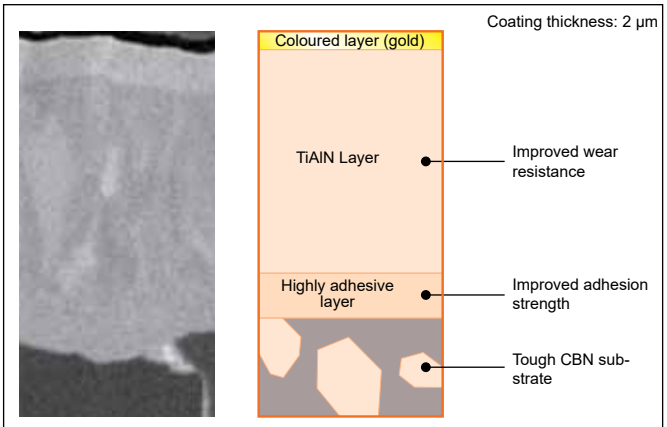

High-Precision Machining
(Low- to medium-speed)

Laminated high-strength AlCrN multi-layered coating and highly heat-resistant TiCN coating is applied to a highly wear-resistant substrate to maintain excellent surface finish quality.

BNC2020

General Purpose Machining
(Low to medium speed, unstable cutting)

Application of highly wear-resistant TiAlN coating to a tough substrate. Machining stability in low-rigidity environments and high-load cutting is dramatically improved.

Coated SUMIBORON
BNC300 / BN350

The ultimate grades BNC300 and BN350 in interrupted machining of hardened steel

General Features

- **BNC300**
  CBN substrate that emphasizes on toughness coupled with a highly wear resistant TiAlN based coating layer that has improved adhesion strength. With a good balance of fracture and wear resistance, stable and longer tool life can be achieve in interrupted cut or in a mixture of continuous and interrupted cutting.

- **BN350**
  SUMIBORON series highest fracture resistance and toughest CBN. Reliable grade for achieving stable tool life in heavy interrupted cutting conditions.

Characteristics

BNC300

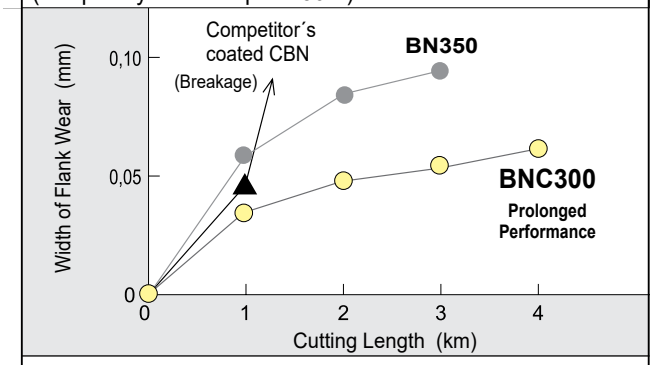

- Stable and long tool life in interrupted cutting
  Achieving stable and long tool life in heavy interrupted cutting, with superior fracture resistance.
- Superior dimensional precision
  Good adhesion strength, TiAlN based, high wear resistance coating. Achieving superior dimensional precision even in interrupted cutting.
- Suitable for different types of workpieces
  Achieving significantly longer tool life even on workpieces that have a mixture of continuous and interrupted cutting.

BN350

- Stable and long tool life in interrupted cutting
  Stable and long tool life with superior fracture resistance, that prevents fractures which commonly occurs during interrupted cutting.

BN7000 K PM / BN7115 PM

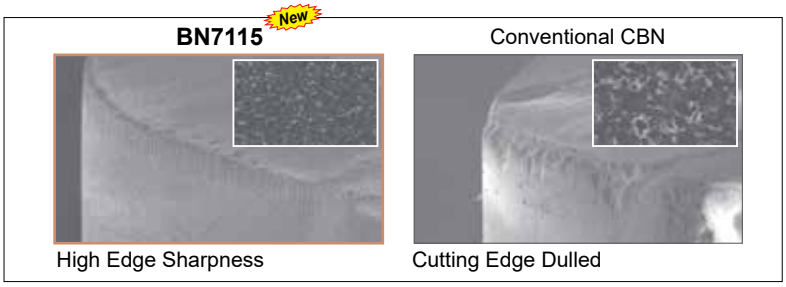

New

General Features

Good wear resistance through high CBN content also delivers superior fracture resistance by increasing the binding strength between CBN particles.
BN7115 provides stable performance for high-speed finishing work and is ideal for finishing of sintered alloys.

New cutting edge treatment with an emphasis on fracture resistance: “US” type chipbreaker now available.

Removal of binder → comparison of CBN particles ‘ binding strength

Features

BN7000

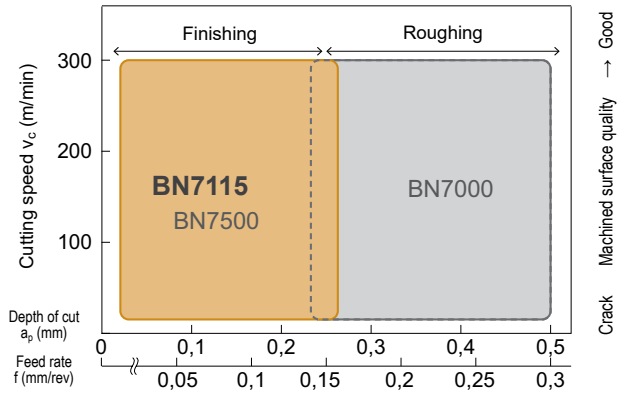

- Achieves high-efficiency machining of sintered alloys of various shapes with a standard and two types of cutting edge variations. Also exhibits high performance for difficult-to-cut materials such as rolls, high speed steel and heat resistive alloys. Exhibits good thermal resistance in high-speed machining of cast iron.

BN7115 New

- With improved CBN particle/binder boundary strength due to the special binder and improved binding strength between CBN particles thanks to our proprietary sintering process, the edge sharpness in sintered alloy machining is excellent and burrs and tearing are suppressed.

Features

BNC8115 New

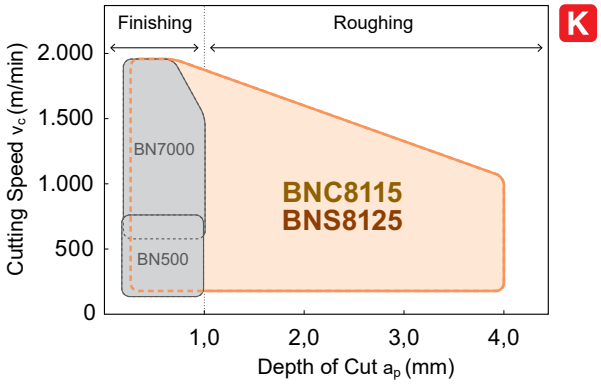

- PVD coating with excellent wear resistance suppresses flank wear when machining difficult-to-cut cast iron and hardened steel. Ideal for roughing and depth-of-cut of 0,5 to 3,0 mm. Can also be used for roughing and finishing of grey cast iron. Gold-colored coating improves visibility of used corners.

BNS8125 New

- Optimising the particle size distribution of the CBN particles has resulted in improved chipping resistance and longer life while machining wear resistance during grey cast iron machining.

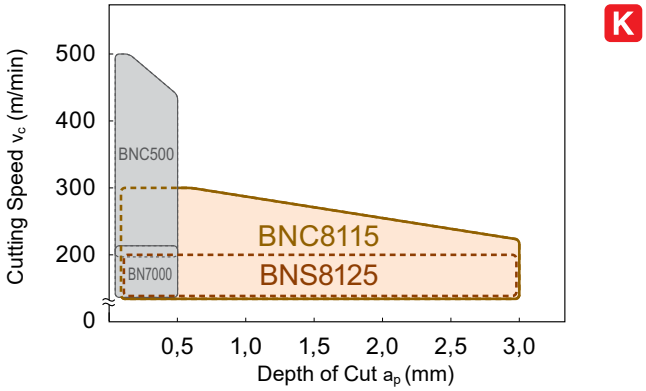

Application Range

Grey Cast Iron

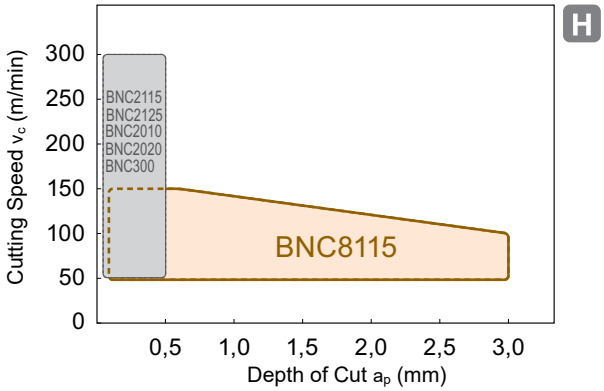

Wet machining is recommendet for grey cast iron. In case of dry machining, our 1st recommendation are BNC8115/ BNS8125 for both roughing and finishing.

Coated CBN grade for ductile cast iron machining

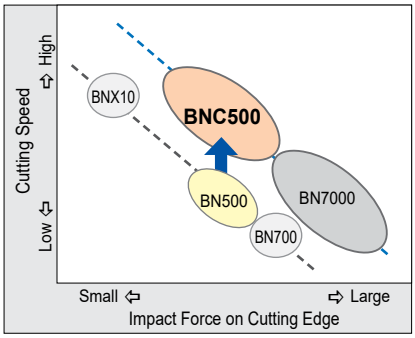

General Features

Further improvements in the toughness of the sintered CBN and wear resistance from the application of a newly developed high-purity TiC binder. In addition, it demonstrates exceptional wear resistance by combining a ceramic coating with excellent heat resistance. High-speed and high-precision machining is achieved when finishing ductile cast iron. It also provides a long, stable tool life in machining high-strength ductile cast iron, special cast irons such as vermicular cast iron, and centrifugally cast iron.

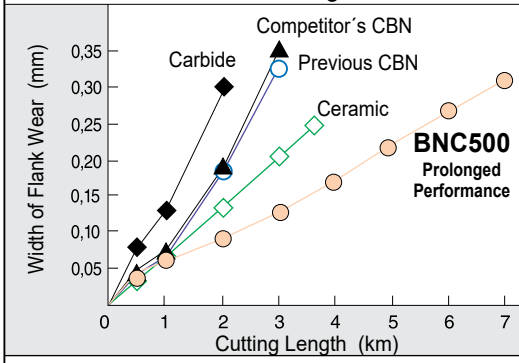

Characteristics

- Achieves a Long, Stable Tool Life at v_c = 400 m/min
  Superior wear resistance, makes stable machining possible under high-speed conditions.
- Supports High-precision Machining
  Can maintain excellent dimensional tolerance and surface roughness.

SUMIBORON Binderless is a polycrystalline cubic boron nitrid (CBN) that directly binds nanometer- or sub-micron-level CBN particles without binder materials.
Binderless CBN is harder and has better thermal conductivity. Therefore, it enables higher efficiency and longer tool life in machining of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy.

SUMIBORON Binderless CBN

Advantages

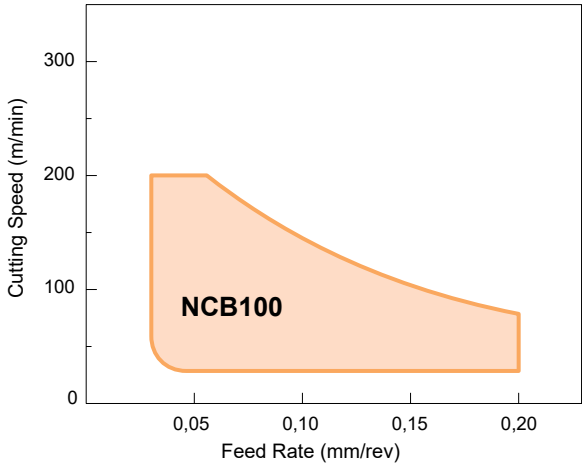

– Higher efficient machining and longer tool life have been realized by the effects of higher hardness and thermal conductivity than conventional CBN grades.
– Achieves high precise machining and better surface integrity because of less adhesion by not containing any binder materials.
– Ideal tool material for high-efficient finishing of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy, cemented carbides and cermets.
– NBC100 is able to maintain excellent dimensional accuracy and surface roughness for a long period.
– Shows improved work efficiency and cost reduction by less frequency of exchanging inserts compared to conventional tool grades.

Production Process

General

Since 1970s, Sumitomo has pioneered the development of sintered cubic boron nitride (CBN) and sintered diamond (PCD) tools successfully used in the tool making industries. These tool materials can be epoch-making in a sence of broadening the cutting application range.

Production Process

In the production process of **SUMIBORON / SUMIDIA**, CBN powder / diamond powder is firstly synthesized under the ultra - high pressure, and secondly, the synthesized crystalline grains are sintered.

Fig. 2 shows a diagram of high temperature high pressure apparatus for processing the ultra - high pressure sintering operation.
This apparatus is basically composed of a piston and a cylinder to generate ultra - high pressure as high as 5000 N/mm^2 with a special device. The piston and cylinder are made of cemented carbide.

To manufacture final products round discs of SUMIBORON and SUMIDIA material are cut into specific shapes and brazed on to tool bodies made of cemented carbide, or steel, etc., and after that finished by grinding the edge.
In another process the final product can be obtained only by cutting blanks and finishing them.

General Features

SUMIDIA sintered diamond series has 3 grades (DA1000, DA150, DA90) with individual features depending on the optimum combination of diamond particle size and binder, as well as the NPD10 grade (nano-polycrystalline diamond) where nano-order diamond particles are directly bound with high strength without using binders.
This series is suited to a wide range of applications from machining of aluminium alloy to machining of hard brittle materials and cemented carbide.

Series • Features • Application

Grade		Features	Application	Average size of Diamond grains (μm)	Hardness Hv	TRS (GPa)
SUMIDIA	DA1000	High density sintered material made of ultra-fine diamond particles that demonstrates optimum wear resistance and excellent edge sharpness.	• High silicon aluminum alloy cutting • Rough, interrupted and finishing of Al-alloy • Wood or wooden board cutting • Non-ferrous metal finishing (aluminium, copper alloy)	< 0,5	50 60	≈ 2,60
SUMIDIA	DA150	Micro-grained sintered diamond grade with strong diamond-to-diamond bonding. It is suitable for the machining of non-ferrous metals and other very hard materials.	• Non-ferrous metal finishing (aluminium, copper alloy) • Green or semi-sintered carbide & ceramic roughing • FRP, hard rubber & carbon cutting • Wooden or Inorganic Material Board Cutting	5	50 ~ 60	≈ 1,95
SUMIDIA	**DA90**	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminium. Shows the highest diamond content for excellent wear resistance.	• Machining of high-silicon • Machining of aluminium composite (MMC) • Green or semi-sintered carbide & ceramic roughing • Machining of sintered ceramics/stone/rock	< 50	50 ~ 60	≈ 1,10
SUMIDIA Binderless	**NPD10**	A 100% diamond grade made by nano-level diamond grains with direct conversion sintering. Has the highest wear resistance and fracture resistance and the best edge sharpness.	• Surface finishing of carbide • Machining brittle materials (ceramics)	< 0,05	120 ~ 130	≈ 3,15

Nano-Polycristalline Diamond

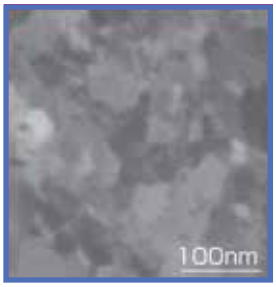

General Features

Nano-polycristalline diamond is a type of polycristalline diamond, produced by directly binding nano-level diamond grains without using any binders.
This material is unique to our company and as compared to conventional diamond grades containing binders, it exhibits higher strength, excellent wear resistance and fracture resistance.
SUMIDIA Binderless is the series of tools with cutting edges made from this high performance nano-polycristalline diamond.

- Indexable Inserts (Carbide Machining)

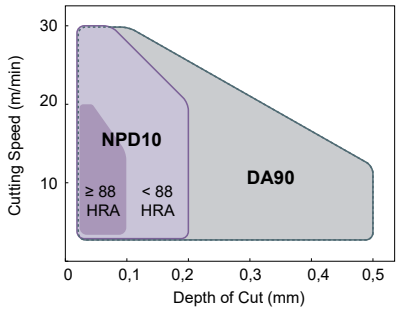

General Features

NPD10 is made from high-hardness nano-polycrystalline diamond.
This is a pure diamond material, but unlike single-crystal diamonds, it has no anisotropy.
It achieves extended tool life and machining accuracy superior to conventional diamond tools when machining hard brittle materials such as cemented carbide.
DA90 is a polycrystalline diamond grade in which coarse diamond particles have been sintered to form a dense structure. The high diamond content, with high wear resistance, makes it ideal for roughing of cemented carbide and hard brittle material.
Optimized design and mass production technology have been developed, achieving the same performance as conventional tools with higher cost performance.

Characteristics

- Ideal for Finishing of Hard Brittle Materials Including Cemented Carbide (NPD10)
  High-precision cutting of cemented carbide thanks to the outstanding wear resistance of nano-polycrystalline diamond.
- Superior Dimensional Tolerance Maintained for a Long Time (NPD10)
  Tool replacement count can be drastically reduced compared to conventional diamond tools, enabling work efficiency to be improved and total costs to be reduced.
- Ideal for Roughing of Hard Brittle Materials Including Cemented Carbide (DA90)
  Stable tool life in sintered surface machining of cemented carbide and roughing of hard brittle materials thanks to the outstanding wear resistance of the coarse-grained polycrystalline diamond.
- Uses SUMIDIA NF Insert (DA90)
  Optimized design and mass production technology have been developed, achieving the same performance as conventional tools with higher cost-performance.

General Features

SumiDia DA1000 is a high density, ultra fine grained sintered PCD with high toughness similar to that of cemented carbides.

SumiDia DA1000, with its great improvement in fracture resistance, eliminates the breakage problems faced by conventional PCD tools especially during the milling of Aluminium alloys and achieves a longer and more stable tool life.

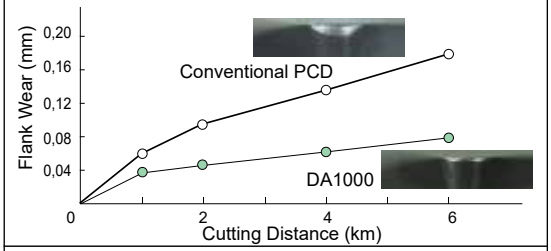

Furthermore, the NF type inserts makes it even more cost effective.

NF Type Inserts

General Features

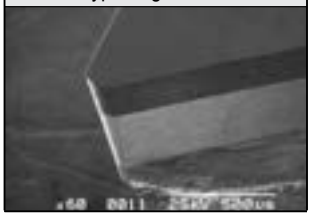

- **Total Cost Effectiveness with High Performance and Lower Price**
  - Optimum design utilizing improved mass production techniques provides a relatively lower cost.
  - Regrindable type results in huge total cost reduction.

- **Wide Application Range**
  - Wide range of stocked items for small hole boring, OD turning to milling processes.
  - Negative and positive type inserts that are applicable on standard lever-lock, pin-lock type holders.

Efficiency

SumiDia NF-type inserts preserve the excellent basic performance of DA1000 while achieving high cost performance through optimal design and development of mass production technology. These inserts achieve the high performance of SUMIDIA DA1000, including excellent fracture resistance, wear resistance and smooth work material surface finishing.

Precision Tools

BSME → M48-50

Very small boring bar - brazed type

- Solid carbide shank boring bar with brazed CBN tip and inner coolant supply.
- For tiny hole diameter boring in hardened steel.
- Min. boring dia. is ø 2,5 mm.

SEXC → M48-51

CBN boring tool for small diameter boring

- Solid carbide shank boring bar with indexable CBN insert and inner coolant supply.
- For small hole diameter boring in hardened steel.
- Min. boring dia. is ø 4,0 mm.

BNBB → M52

Small hole boring tools

- CBN cutting edge is brazed on to a solid carbide shank.
- Small hole boring for hardened steels.
- Min. boring dia. is ø 3,5 mm.

BNZ → M53

Small hole boring bars

- Solid carbide boring bars with economical CBN insert.
- Small hole boring for hardened steels.
- Min. boring dia. is ø 7,0 mm.

BNB → M53

Small hole boring bars

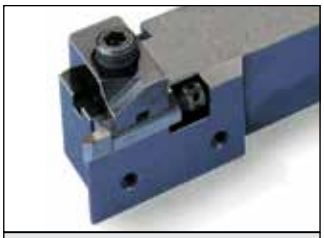

- Solid carbide boring bars with economical CBN and PCD insert.
- Min. boring dia. is ø 10,0 mm.

GWB / PSC → M54-55

CBN Grooving System for Hardened Steels

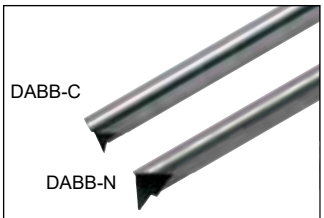

- Tangential Inserts – Double clamp holder
- Groove Widths from 1,5 – 6,0mm
- New CBN grade for interrupted grooving
- ISO-PSC polygon modular grooving system

BNGG → M56

Threading holders

- CBN cutting edge for hardened steel
- Adjustable threading after regrinding.

DABB → M57

Small hole boring tools

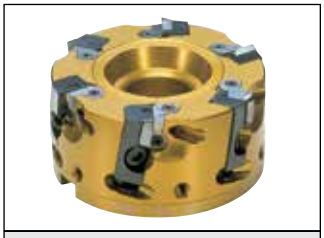

- PCD cutting edge for finishing of small non-ferrous parts
- Min. boring dia. is ø 3,0 mm.
- DABB-C for boring
  DABB-N for profiling and corner grooving

ANX
→ M58-69

High speed cutter for Non-ferrous Metal

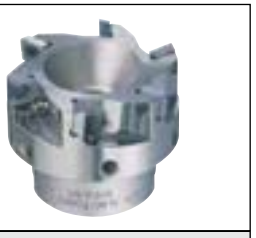

- Achieves feeds of over vf = 30.000 mm/min
- 6 different edge preparations
- Simple screw-fastening structure enables fine adjustments to be made easily
- Precise applications of coolant to the machining point
- Milling cutter range with diameter from Ø 32-160 mm

RF
→ M70

High speed face mill for Aluminium

- Finishing and roughing aluminium alloys and non-ferrous materials
- High precision and highspeed machining vc = 5000 m/min
- Alumimum alloy body Run-out less than 10 µm
- Easy assembling

SRF
→ M71

High speed face mill for Aluminium

- Small diameter cutter for small machines
- High speed roughing and finishing with SumiDia DA2200
- High speed capability of rpm = 20.000
- Economical PCD insert NF type

FMU
→ M72-73

"BN Finish Mill" for finishing grey cast iron

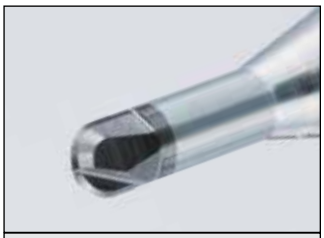

- High speed machining vc = 1500 m/min
- Excellent surface roughness Rz = 3,2
- Run-out less than 10 µm
- Easy assembling

BNES
→ M74

"Helical Master" SUMIBORON Endmill

- Spiral CBN brazed cutting edge for super finishing hardened steel (HRC 50 – 60)
- Dry machining
- Stable cutting
- High accuracy
- Excellent swarf evacuation

BNBP
→ M75

"Mould Finish Master" SUMIBORON Micro Ball Nose Endmills

- High precision machining of hardened steels < HRC 70 with long tool life
- Super tough grade SUMIBORON BN350 prevents chipping of the cutting edge
- R accuracy : ±0,005 mm

NPDRS / NPDB(S)
→ M76-77

"Mould Finish Master" SUMIDIA Binderless Endmills

- NPDRS - radius endmills
- NPDB(S) - ball nose endmills
- For finishing of carbide and brittle materials
- High precision machining and long tool life

DAL / DDL / DML
→ M78-79

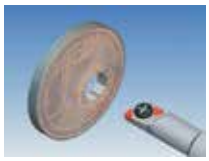

High precision SUMIDIA Drills

- PCD cutting edge is brazed on to a solid carbide shank.
- From general to high precision drilling of Aluminium alloys
- DML type is suitable for chamfering and stepped drilling

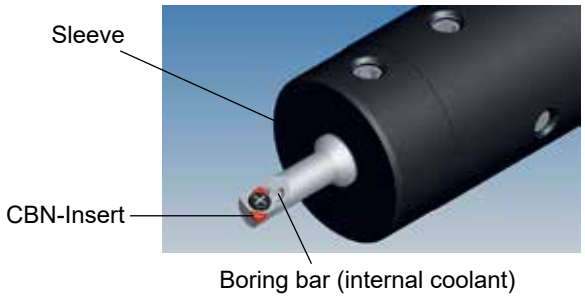

BSME/SEXC Series

Features

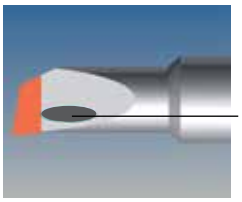

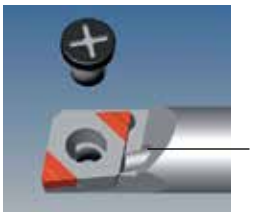

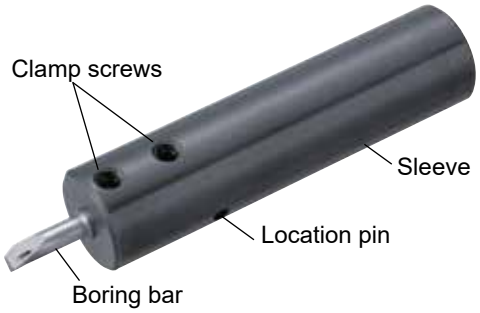

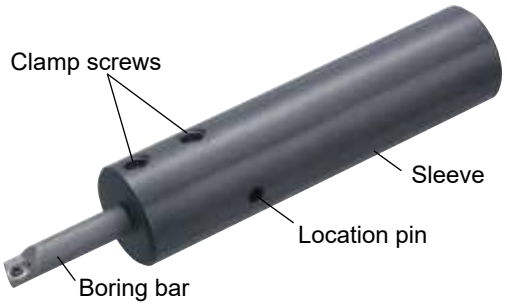

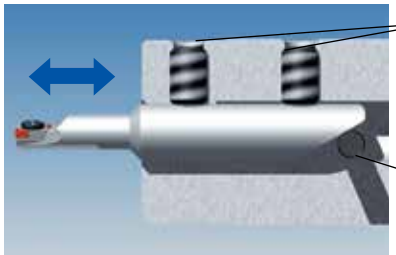

- New ultra small boring bar with CBN cutting edge
- Internal coolant
- Easy setting and handling
- High accuracy
- Carbide body for high rigidity
- One sleeve for different diameters

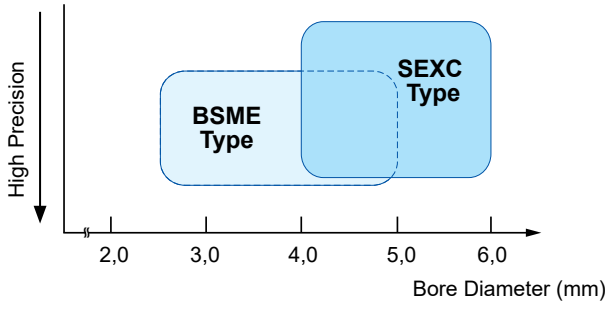

Basic System

2 Types of CBN Small Hole Boring Bar System

BSME - CBN Brazed Cutting Edge Type	SEXC - Indexable CBN Insert Type
Min. bore diameter: Ø 2,5 – 5,0 mm	Min. bore diameter: Ø 4,0 – 6,0 mm
Unique cutting edge shape with high quality and sharpness  Internal coolant hole (standard)	2 corner inserts  Internal coolant hole (standard)
	
Excellent repeatability of boring bar (deviation within 0,020 mm)  Clamp screws Location pin for controlled cutting edge position	

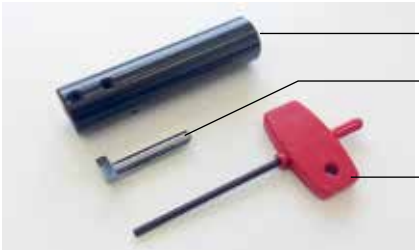

Application Range

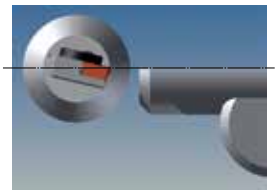

Recommended Cutting Conditions

Spindle Speed (*n*)	>2000 min^{-1}	Low speed may cause chattering and chipping on the cutting edge.
Depth of Cut (a_p)	0,01 – 0,15 mm	Excessive depth of cut may cause larger tool deflection resulting in deterioration of bore accuracy.
Feed Rate (f)	0,01 – 0,1 mm/rev	-

Accessories

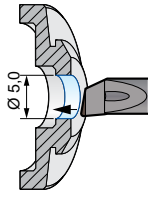

Mounting Instruction

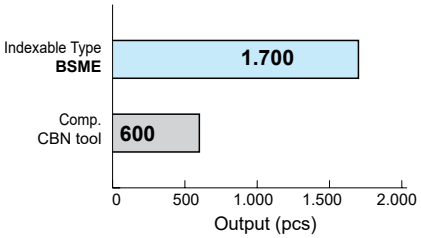

1. Insert alignment tool into the sleeve until you connect with the pin inside. Gently lock the screws to hold.	
2. Locate the sleeve into your tool-holding system. Gently lock the screws to hold.	 
3. Clock the flat of the alignment tool into a straight position. 	After adjustment, equipped boring bar has automatically cutting peak height of zero on the center of tool. 
4. Use pre setting machine to set the diameter of the boring bar.	

Application Example

BSME Hardened Alloy Steel Valve Component

The BSME type provides stable machining.
Tool life is over 2 times longer than competitor´s CBN tool.

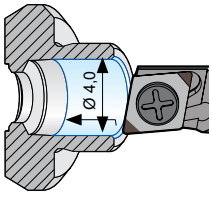

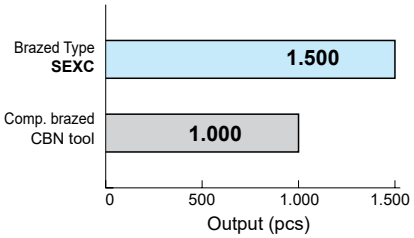

Work Material:	Hardened alloy steel valve component (automotive component)
Tool:	BSME R50020D2S6
Grade:	BN2000
Cutting Conditions:	v_c = 135 m/min f = 0,02 mm/rev a_p = 0,10 mm Dry

SEXC Bearing Steel Small Automotive Component

The SEXC type provides drastically reduced tool costs.
Tool life is 1,5 times longer than competitor´s brazed CBN tool.

Work Material:	Bearing steel small automotive component (60 HRC)
Holder:	E06D2 SEXC R/L03-04P
Insert:	ECXA 030X02LF (BN2000)
Cutting Conditions:	v_c = 50 m/min (4.000 rpm) f = 0,02 mm/rev a_p = 0,02 mm Wet

■ Recommended Cutting Conditions

Work Material	SUMIBORON BN250		Notes
Hardened steels ($H_RC45–68$)	Cutting speed (v_c)	30–150 m/min	Low speed may cause chattering in cutting process and chipping occurence on the cutting edge.
	Feed rate (f)	0,03–0,1 mm/rev	–
	Depth of cut (a_p)	0,03–0,2 mm	Excessive depth of cut may cause larger deformation of tool,resulting in deterioration of bore accuracy.

■ Precaution On Use

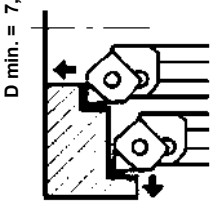

- Adjust overhang to achieve absolute minimum.
- For use of a small diameter brazed boring tool, select high speed and small feed rate, as much as possible.

Expansion

CVD Single Crystal Diamond SCV10 Wiper Blade

Wiper blade adopts high-strength single-crystal diamond using Sumitomo Electric Hardmetal's vapour phase synthesis technology.
Sharp cutting edge realises burr-free, mirror finish surface quality in aluminum alloy machining.
Superior wear resistance maintains cutting edge sharpness for a long time, reducing total tool costs.

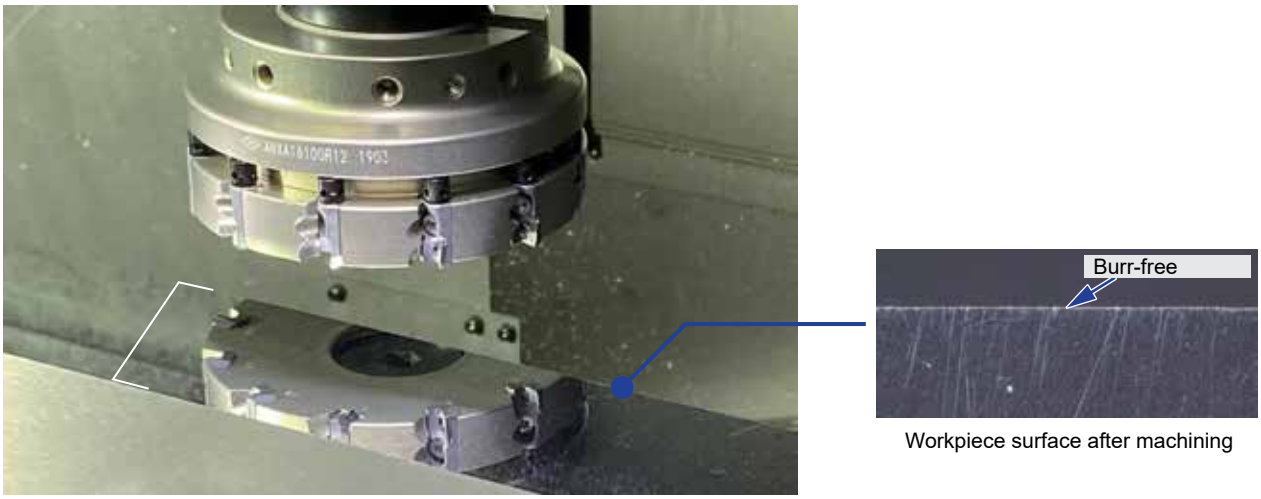

Burr-free

Sharp cutting edge and excellent wear resistance suppress burrs over the long term.

Mirror Finishing

Sharp cutting edge achieves mirror finish with cutting alone.

Workpiece surface after machining

Polycrystalline Diamond SUMIDIA DA1000 / DA90

Through the ideal combination of diamond particle size and binder, SUMIDIA DA1000/DA90 possess various features and is suitable for all kinds of applications such as machining of aluminum alloy and cemented carbide.

Grades, Features and Applications

Grade	Features	Applications	Diamond share (%)	Average grain size of diamond particles (μm)	Hardness HK (GPa)	TRS (GPa)
DA1000	High-density sintered grade made of ultra-fine grain diamond that exhibits excellent wear and fracture resistance as well as edge sharpness.	Machining of High-Silicon Aluminum Alloy, Rough, Interrupt and Finish Machining of Aluminum Alloy, Woodcraft or Wooden Board Cutting/Facing, General Finishing of Non-Ferrous Metals	90–95	≤ 0,5	50–60	≈ 2,60
DA90	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminum. Shows the highest diamond content for excellent wear resistance.	Machining of High-Silicon Aluminum Alloy, Machining of Aluminum Composite (MMC), Green or Semi-Sintered Cemented Carbide & Ceramic Roughing, Machining of Sintered Ceramic/Stone/Rock	90–95	≤ 50	50–65	≈ 1,10

Blades are sold separately. If using a blade for corner radius machining (ANB1604R/ANB1608R), DC = DCX.
The weight includes the weight of the blade and parts (excluding the centre bolt).
All aluminium alloy bodies with a maximum blade diameter (DCX) of Ø 80 to Ø 125 have the same diameter (DCB) of the retainer hole (metric Ø 27/in Ø 25,4).

- Standard inserts and Wiper inserts can be used on the same cutter body.
- Standard inserts with nose radius should be used where vibration is present. As such, Wiper-inserts will not be applicable.
- Inserts can be regrind 3 times (up to minimum IC diameter 9,225 mm).
- When using reground inserts, it is advisable to reconfirm insert height and cutting diameter with a tool pre-setter.
- Do not mix new and reground inserts, or even inserts with different regrind amount on the same cutter.

FMU Type

High Speed Finishing of Grey Cast Iron

Features

- High speed machining v_c = 1.500 m/min
- Excellent surface roughness Rz = 3,2 (Ra = 1,0)
- Safety structure for the centrifugal force under high speed cutting conditions
- Run-out is less than 10 µm
- Easy assembling method using the setting gauge
- Running cost is reduced because of economical insert

Application

GG25 – GG30 (HB200 – 250) grey cast iron with pearlite matrix, and ferrite matrix (HB130 – 160)
Application examples: engine block, cylinder block, etc

Specifications

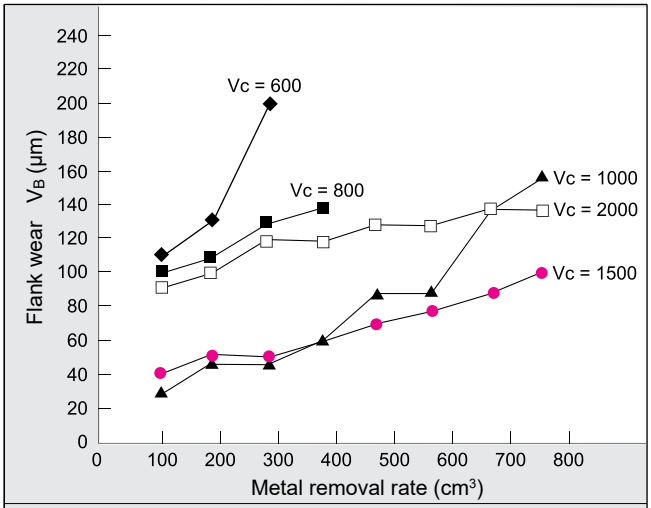

FMU Type: ø 80–ø 315 mm
Insert: SNEW1203ADTR/L
Low cutting force type: SNEW1203ADTR/L-S

Recommended Cutting Conditions

Speed: v_c = 800–2000 m/min
Feed: f_z = 0,1–0,3 mm/tooth
Depth: a_p = 0,5 mm or less
Dry cutting

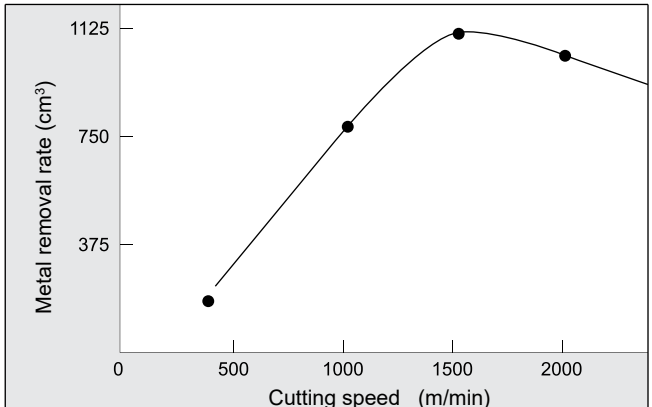

Performance

● Tool Life Diagram

Work material : GG25 H_B240 (Pearlite)
Cutting speed : v_c = 600–4000 m/min
Feed rate : f_z = 0,15 mm/tooth
Depth of cut : a_p = 0,5 mm, Dry

● Estimated Tool Life

Work material : GG25 H_B240 (Pearlite)
Cutting speed : v_c = 400–4000 m/min
Feed rate : f_z = 0,15 mm/tooth
Depth of cut : a_p = 0,5 mm, Dry

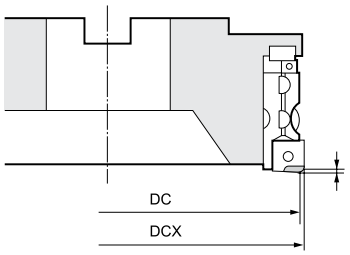

● Milling of ductile cast iron and alloy steel casting do not produce the best results.
● Dry cutting is recommended. Wet cutting will result in chipping of cutting edges in the early stages due to thermal cracking.

DAL/DDL/DML Type

From general to High Precision Drilling of Aluminum Alloys!

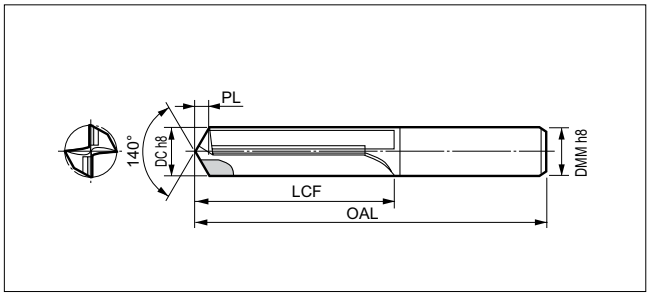

- High precision DAL type is able to produce holes of IT Class of 7 – 8.
- General DDL type is able to produce holes of IT class of 11 – 12, mainly for drilling of pre-tap holes.
- DML type is DDL type with a chamfer edge, incorporating 2 processes in one operation.

Basics of Turning

■ Calculating Power Requirement

$$P_c = \frac{a_p \cdot f \cdot v_c \cdot K_c}{60 \times 10^3 \times \eta}$$

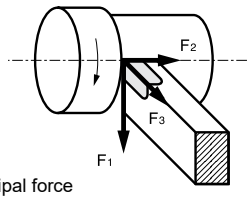

$$H = \frac{P_c}{0{,}75}$$

P_c : Net power requirement (KW)
v_c : Cutting speed (m/min)
f : Feed rate (mm/rev)
a_p : Depth of cut (mm)
η : Machine efficiency (0,70 ~ 0,85)
K_c : Specific cutting force (N/mm²)
H : Required horsepower (HP)

● Rough value of specific cutting force (K_c)

General steel :	2.500 ~ 3.000 N/mm²
Cast iron :	1.500 N/mm²
Aluminum :	800 N/mm²

■ Cutting Force

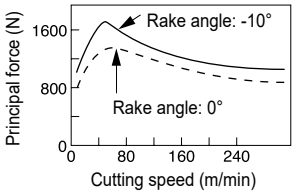

F_1 : Principal force
F_2 : Feed force
F_3 : Back force

● Calculating cutting force

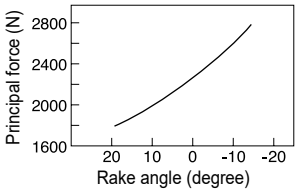

$$P = K_c \cdot q = \frac{k_c \times a_p \times f}{1000}$$

P : Cutting force (N)
K_c : Specific cutting force (N/mm²)
q : Chip area (mm²)
a_p : Depth of cut (mm)
f : Feed rate (mm/rev)

■ Cutting Speed and Cutting Force

■ Rake Angle and Cutting Force

■ Calculating Cutting Speed

① Calculating rotational speed from cutting speed

$$n = \frac{1000 \cdot v_c}{\pi \cdot D}$$

n : Spindle speed (min⁻¹)
v_c : Cutting speed (m/min)
D : Diameter of workpiece (mm)
$\pi \approx 3{,}14$

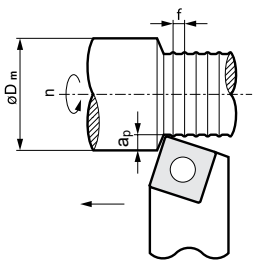

(Eg.) v_c = 150 m/min, D = 100 mm

$$n = \frac{1000 \times 150}{3{,}14 \times 100} = 478 \text{ (min}^{-1}\text{)}$$

② Calculating cutting speed from rotational speed

$$v_c = \frac{\pi \cdot D \cdot n}{1.000}$$

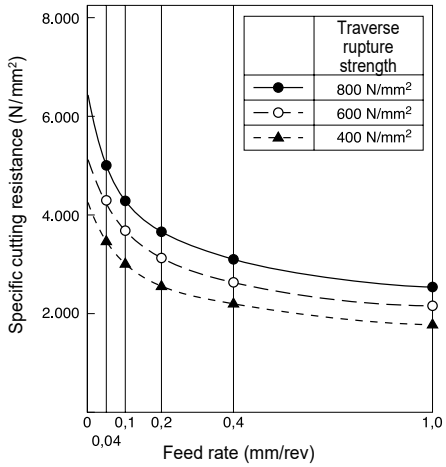

Refer to the above table

n : Spindle speed (min⁻¹)
v_c : Cutting speed (m/min)
f : Feed rate (mm/rev)
a_p : Depth of cut (mm)
D_m : Diameter of workpiece (mm)

■ Feed Rate and Specific Cutting Force

(For carbon steel)

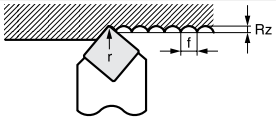

When feed rate decreases, specific cutting force increases.

■ Roughness

● Theoretical Surface Finish

$$Rz = \frac{f^2}{8 \times r}$$

Rz : Surface finish (mm)
f : Feed rate (mm/rev)
r : Nose radius (mm)

● Actual surface roughness

Steel :
Theoretical surface finish x 1,5–3
Cast iron :
Theoretical surface finish x 3–5

● Ways to Improve Surface Finish

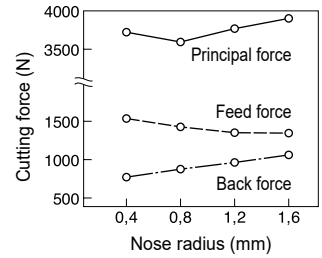

① Use an insert with a larger nose radius.

② Optimize the cutting speed and feed rate so that built-up edge does not occur.

③ Select an appropriate insert grade.

④ Use wiper insert.

■ Nose Radius and Cutting Force

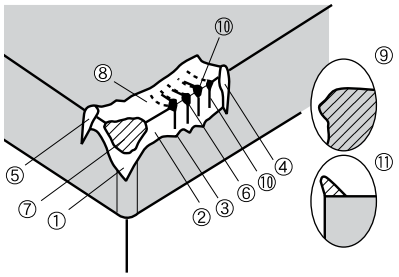

Large nose radius increases back force.

Work : 42CrMo4 (Hs38)
Inserts : TNGA2204○○
Holder : PTGNR2525-43
Condition : v_c = 100m/min
a_p = 4mm
f = 0,45 mm/rev

Tool Failures and Tool Life

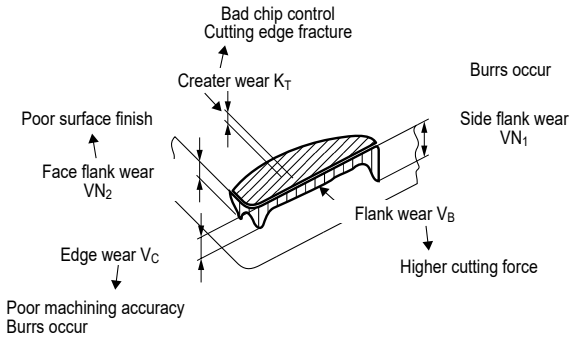

■ Forms of Tool Failures

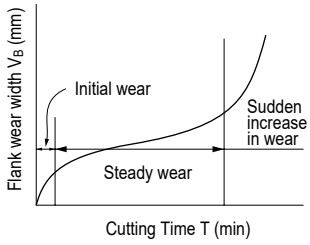

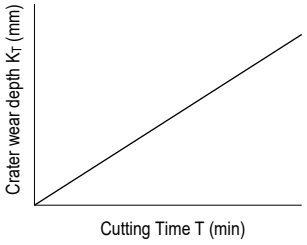

Cat.	No.	Name of Failure	Cause of Failure
Resulting from Mechanical causes	1~5	Flank Wear	Due to the scratching effect of hard grains contained in the work material.
	6	Chipping	Fine breakages caused by high cutting loads or chattering.
	7	Fracture	Due to the impact of an excessive mechanical force acting on the cutting edge.
Resulting from Chemical reactions	8	Crater Wear	Swaft chips removing tool material as it flow over the top face at high temperatures.
	9	Plastic Deformation	Cutting edge is depressed due to softening at high temperatures.
	10	Thermal Crack	Fatigue from rapid, repeated heating and cooling cycles during machining.
	11	Built-up Edge	Work material is pressure welded on the top face of the cutting edge.

■ Tool Wear

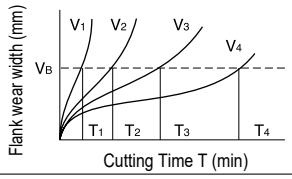

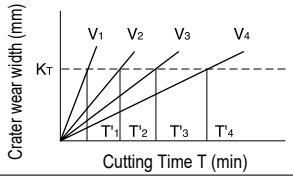

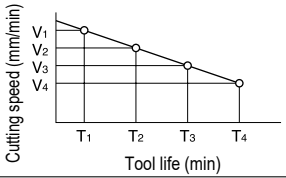

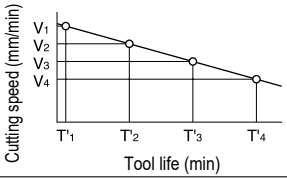

Forms of Tool Wear

Flank wear	Crater wear
	
Wear is rapid initially, then it proceeds more gradually in proportion with cutting time until a certain limit, beyond which it increases rapidly again.	Crater wear is more progressive with no sudden breakdown pattern.

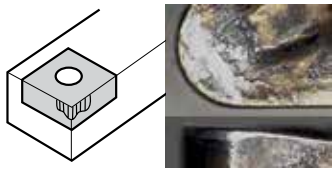

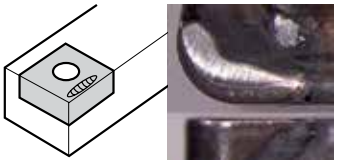

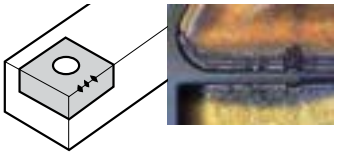

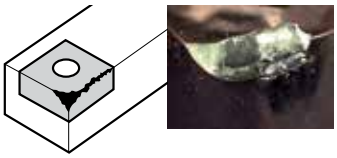

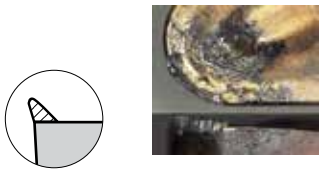

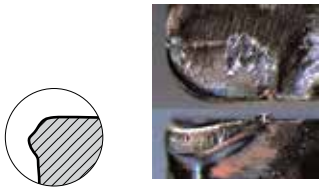

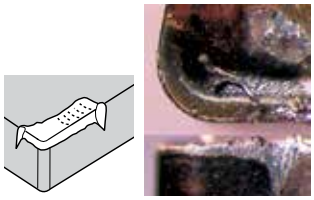

■ Tool Life (V-T)

Measure the relative tool lives of the specified wear, over a range of cutting speeds, then plot the tool life along the X-axis and the cutting speed along the Y-axis on a double logarithm graph.

	Flank wear	Crater wear
Tool wear

Tool Failure and Remedies

■ Trouble Shooting Guide for Turning

	Damage	Cause	Countermeasures
Tool Edge Failure	Excessive flank wear 	- Grade lacks wear resistance. - Cutting speed ist too fast. - Feed rate ist far too slow.	- Select a wear resistant grade. P30 ⇨ P20 ⇨ P10 K20 ⇨ K10 ⇨ K01 - Use an insert with a larger rake angle. - Decrease the cutting speed. - Increase feed rates.
	Excessive crater wear 	- Grade lacks crater wear resistance. - Rake angle is too small. - Cutting speed is too fast. - Feed rate and depth of cut are too large.	- Select a more crater-resistant grade. - Use an insert with a larger rake angle. - Select an appropriate chipbreaker. - Decrease the cutting speed. - Decrease the D.O.C. and feed rate.
	Cutting edge chipping 	- Grade lacks toughness. - Insert falls off due to chip build-up. - Cutting edge lacks toughness. - Feed rate and depth of cut are too large.	- Change to tougher grades. P10 ⇨ P20 ⇨ P30 K01 ⇨ K10 ⇨ K20 - Increase amount of honing on cutting edge. - Reduce rake angle. - Reduce feed rates and depth of cut.
	Cutting edge fracture 	- Grades lacks toughness. - Cutting edge lacks toughness. - Holder lacks toughness. - Feed rarte is too fast. - Depth of cut is too large.	- Change to tougher grades. P10 ⇨ P20 ⇨ P30 K01 ⇨ K10 ⇨ K20 - Select a chipbreaker with a strong cutting edge. - Select a holder with a larger approach angle. - Select a holder with a larger shank size. - Decrease the D.O.C. and feed rate.
	Build-up edge 	- Inappropriate grade selection. - Dull cutting edge. - Cutting speed is too slow. - Feed rate ist too slow.	- Select a grade with less affinity to the work material. Coated carbide or cermet grades. - Select a grade with a smooth coating. - Use an insert with a larger rake angle. - Reduce amount of honing. - Increase cutting speeds. - Increase feed rates.
	Plastic deformation 	- Grade lacks thermal resistance. - Cutting speed is too fast. - Feed rate is too fast. - Depth of cut is too large. - Not enough cutting fluid.	- Select a more crater-wear-resistant grade. - Use an insert with a larger rake angle. - Decrease the cutting speed. - Reduce feed rates and depth of cut. - Supply a sufficient amount of coolant.
	Notch wear 	- Grade lacks wear resistance. - Rake angle is too small. - Cutting speed is too fast.	- Select a wear resistant grade. P30 ⇨ P20 ⇨ P10 K20 ⇨ K10 ⇨ K01 - Use an insert with a larger rake angle. - Alter depth of cutto shift the notch location.

Chip Control

Type of Chip Generation

	a	b	c	d
Shape				
Condition	Continuous chips with good surface finish.	Chip is sheared and separated by the shear angle.	Chips appear to be torn from the surface.	Chips crack before reaching the cutting point.
Application	Steel, Stainless steel	Steel, Stainless steel (Low speed)	Steel, Cast iron (Very low speed, very small feedrate)	Cast iron, Carbon
Influence factor	Easy ← Work deformation → Difficult Large ← Rake angle → Small Small ← D.O.C. → Large Fast ← Cutting speed → Slow			

Type of Chip Control

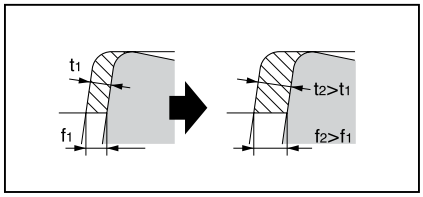

Feed rate	A	B	C	D	E
Large feed rate					
Small feed rate					
NC lathe (For automation)	×	×	○	○	△
General lathe (For safety)	×	○	○	○ ~ △	×

Good : C type, D type

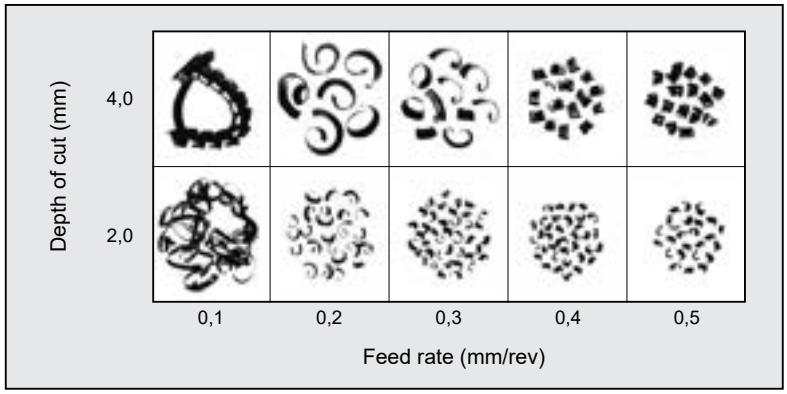

Poor
- A type : Twines around the tool or workpiece, damages the machined surface and affects safety.
- B type : Bulky, causes problems in the automatic chip conveyor and chipping occurs easily.
- E type : Causes spraying of chips, poor machined surface due to chattering, chipping, large cutting force and high temperatures.

Factor of Improvement Chip Control

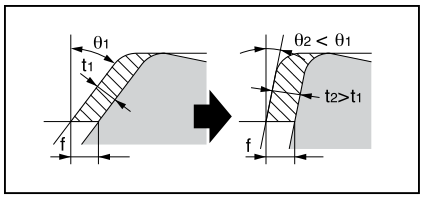

① Increase feed rate

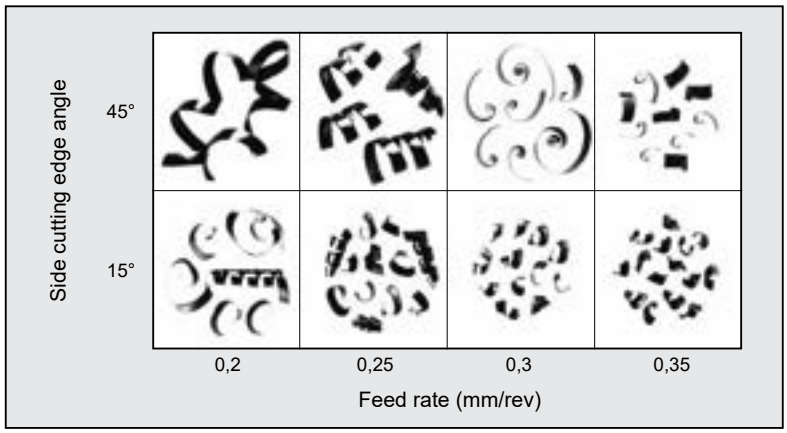

When feedrate increase, chips become thick and chip control improves.

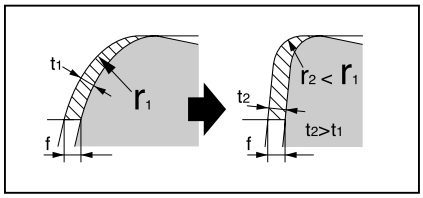

② Decrease side cutting edge

Even if feed rate is the same, smaller side cutting edge angle makes chips thick and chip control improves.

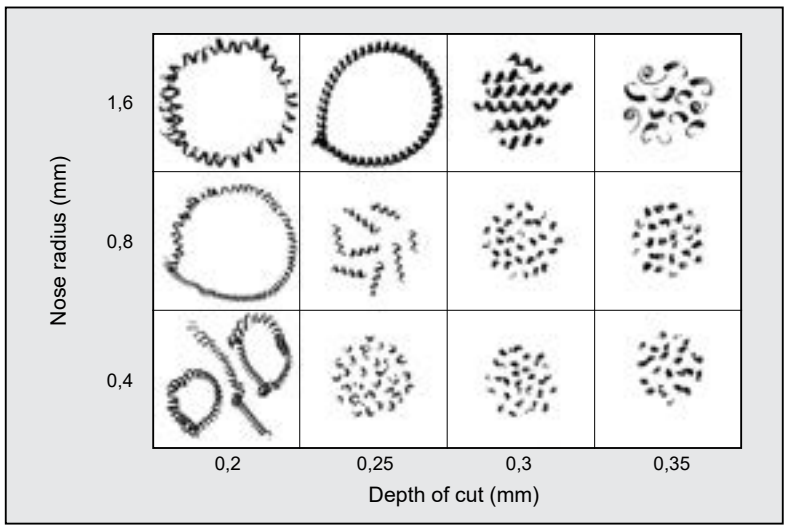

③ Decrease nose radius

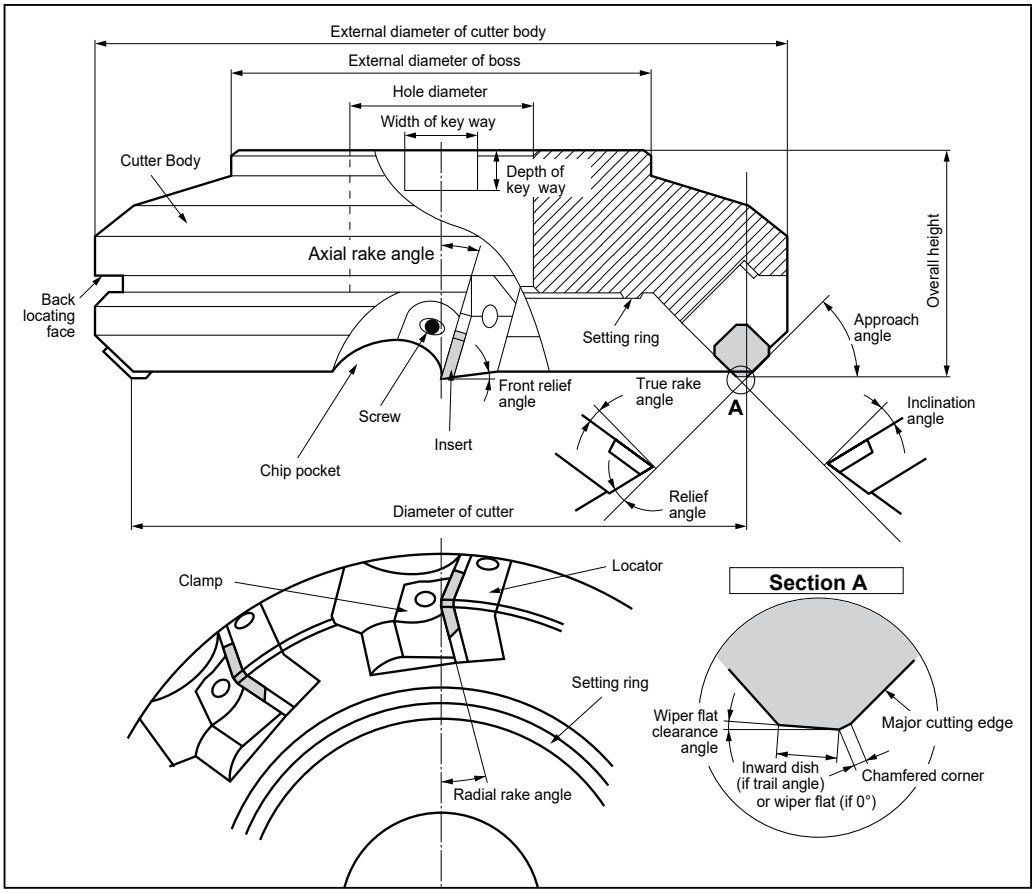

Even if depth of cut is the same, smaller nose radius makes chip thick and chip control improves.

* Cutting resistance increases in proportion with the width of the contact surface. Therefore, with a larger nose radius, cutting resistance and back force increases, chattering may also occur. However, with the same feedrate, a smaller nose radius would produce a poorer surface finish.

Basics of Milling

■ Parts of a Milling Cutter

■ Power Requirement

● Calculating cutting force

$$P_c = \frac{a_p \cdot a_e \cdot v_f \cdot K_c}{60 \times 10^6 \times \eta} \text{ (kW)}$$

● Horsepower

$$H = \frac{Pc}{0{,}75}$$

● Chip removal amount

$$Q = \frac{a_p \times a_e \times v_f}{1.000} \text{ (cm}^3\text{/min)}$$

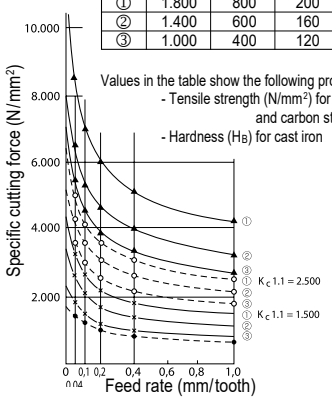

P_c : Net power requirement (kW)
H : Horsepower requirement (HP)
Q : Chip removal amount (cm^3/min)
a_e : Cutting width (mm)
v_f : Feed speed (mm/min)
a_p : Depth of cut (mm)
η : Machine efficiency (0,70 ~ 0,85)
K_c : Specific cutting forrce (N/mm^2)

Eg. rough value
(Steel : 2.500 ~ 3.000
Cast iron : 1.500)

● Relation between feed rate, work material, specific cutting force

Work-piece No.	Alloy steel	Carbon steel	Cast iron	Aluminum alloy
①	1.800	800	200	–
②	1.400	600	160	–
③	1.000	400	120	–

Values in the table show the following properties:
- Tensile strength (N/mm^2) for alloy steel and carbon steel
- Hardness (H_B) for cast iron

● Calculating cutting speed

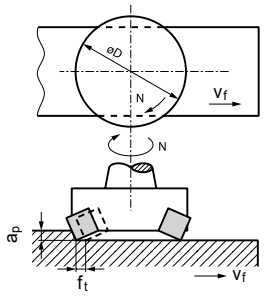

$$v_c = \frac{\pi \times D \times n}{1.000}$$

● Calculating feed rate

$$v_f = f_z \times z \times n$$

$$f_z = \frac{v_f}{z \times n}$$

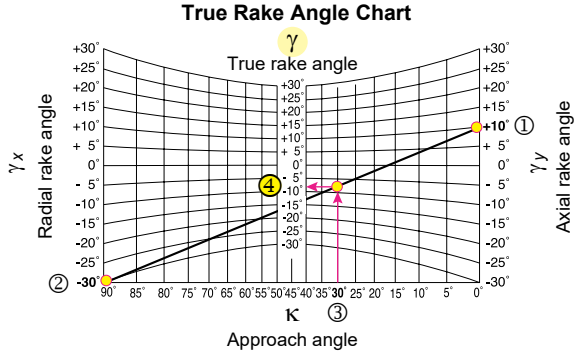

v_c : Cutting speed (m/min)
π ≈ 3,14
D : Cutter diameter (mm)
n : Rotation speed (rpm)
v_f : Feed speed (mm/min)
f_z : Feed rate (mm/tooth)
z : Number of teeth

Functions of the Various Cutting Angles

	Description	Code	Functions	Influences
① ②	Axial rake angle Radial rake angle	γ_y γ_x	Controls chip removal direction, effects adhesion of the chips and thrust force etc.	Rake angles can vary from positive to negative (large to small) with typical combinations of positive and negative, positive and positive or negative and negative configurations.
③	Approach angle	κ	Controls chip thickness and chip removal direction	The effect of the small approach angle is to reduce the chip thickness and cutting force.
④	True rake angle (Effective rake angle)	γ	Controls cutting performance and ability to retain a cutting edge	- With a positive (large) angle, cutting ability and adhesion resistance are improved but the strength of the cutting edge is weakened. - With negative (small) angle, the strength of the cutting edge is improved but chips will tend to adhere more easily.
⑤	Inclination angle	λ	Controls chip removal direction	- With a positive (large) angle, the chip removal is satisfactory with less cutting resistance but the strengh of the corner is weaker.
⑥	Wiper flat clearance angle	α_f	Controls surface finish	A smaller clearance angle will produce a better surface finish.
⑦	Clearance angle	α	Controls edge strength, tool life and chattering, etc	

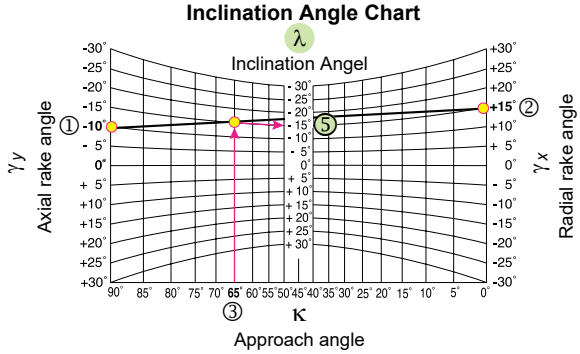

True Rake Angle Chart

Example in using the above chart:		Solution:
① γ_y :	Axial rake angle = +10°	True rake angle
② γ_x :	Radial rake angle = -30°	④ γ = - 8°
③ κ :	Approach angle = 30°	

Formula : $\tan\gamma = \tan\gamma_x \cdot \sin\kappa + \tan\gamma_y \cdot \cos\kappa$

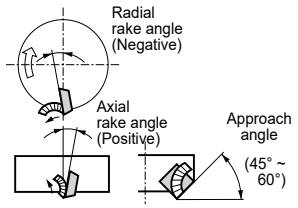

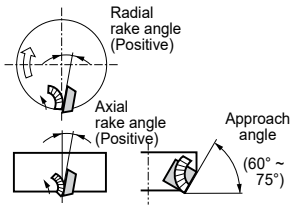

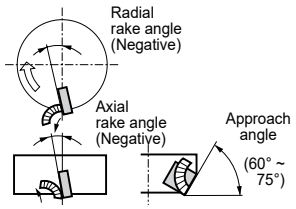

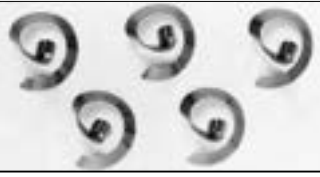

Inclination Angle Chart

Example in using the above chart :		Solution:
① γ_y :	Axial rake angle = -10°	Inclination angle
② γ_x :	Radial rake angle = +10°	⑤ λ = - 15°
③ κ :	Approach angle = 65°	

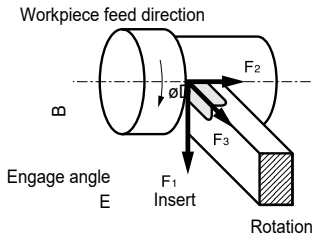

Formula : $\tan\lambda = \tan\gamma_y \cdot \sin\kappa - \tan\gamma_x \cdot \cos\kappa$

Rake Angle Combination

	Negative - Positive Type	Double Positive Type	Double Negative Type
The effects of the various angle configurations with relation to chip formation and chip removal. Chip removal direction Rotation			
Advantage	Excellent chip removal and good cutting action	Good cutting action	Double-sided inserts can be use and higher cutting edge strength
Disadvantage	Only single-sided inserts can be use	Lower cutting edge strength and only single-sided inserts can be use	Dull cutting action
Application	For Steel, Cast iron, Stainless steel, Alloy steel	For general milling of steel For low rigidly work piece	For light milling of cast iron and steel
Typical cutter	WGX, WGC, UFO	DPG	DNX, DGC, DNF
Chips (Eg.) Workpiece: 37Cr4 v_c = 130 m/min f_t = 0.23 mm/tooth a_p = 3 mm			

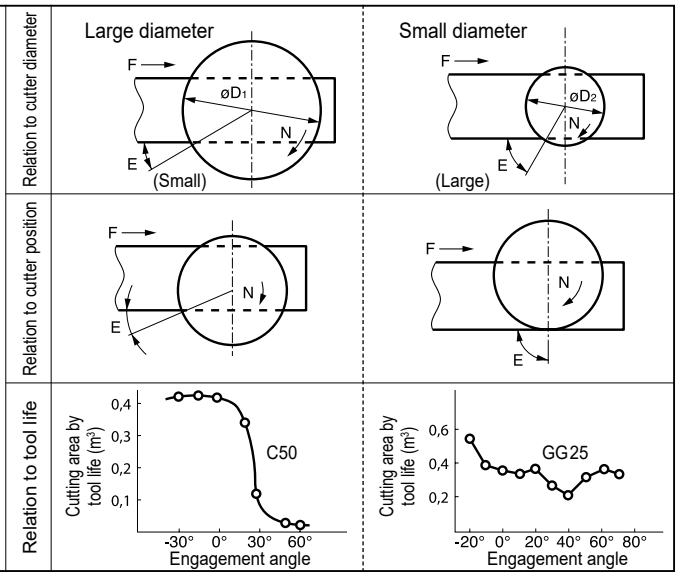

Basics of Milling

■ Relation Between Engage Angle and Tool Life

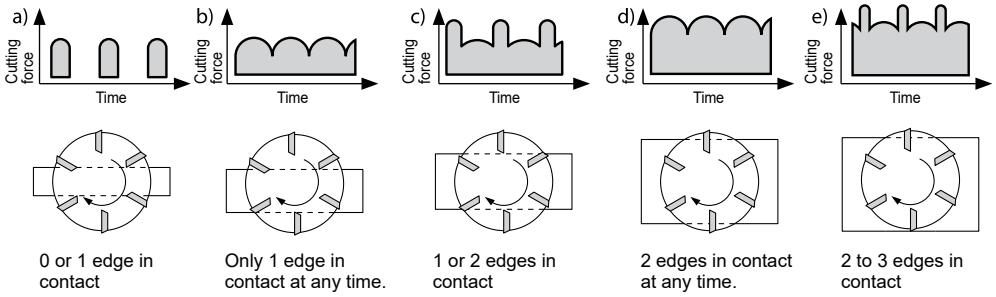

Engage angle denotes the angle by which the full length of the cutting edge comes in contact with the workpiece, with reference to the feed direction. The larger E is, the shorter the tool life.

To change the value of E:
1) Increase the cutter size
2) Shift the position of the cutter

● Relation between the number of simultaneously engaged cutting edges and cutting force:

■ To Improve Surface Roughness

① Milling inserts with wiper flat

When all the cutting edges have wiper flats, a few teeth are intentionally elevated to play the role of a wiper insert.

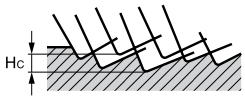

- Insert equipped with straight wiper flat (Face angle: Approx 15' - 1°)
- Insert equipped with curved wiper flat (Eg. curvature R500)

② Integral wiper insert system

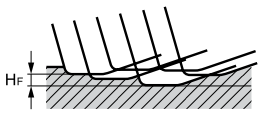

A system to protrude one or two inserts (wiper insert) with a smooth curved edge just a little beyond the other teeth to wipe the milled surface.

- (Applies to WGC, RF types etc.)

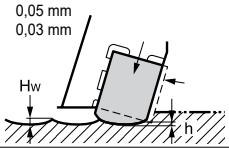

● Surface roughness without wiper flat

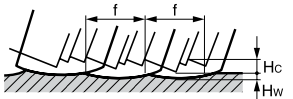

● Surface roughness with straight wiper flat

h : Projected value of wiper insert
Steels : 0,05 mm
Al : 0,03 mm

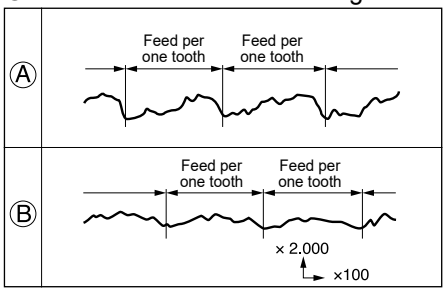

f : Feed rate per revolution

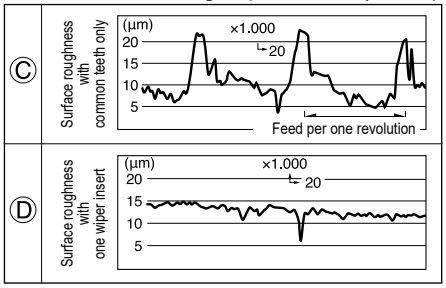

Hc : Surface roughness with only normal teeth
Hw : Surface roughness with wiper insert

● Influence of different face angles on surface finish

- Workpiece: 34CrMo4
- Cutter: DPG 5160 R (Single tooth)
- v_c = 154 m/min
  f_z = 0,234 mm/tooth
  a_p = 2 mm
- Face angle
  Ⓐ : 28'
  Ⓑ : 6'

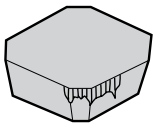

● Effects of having wiper insert (example)

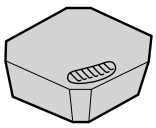

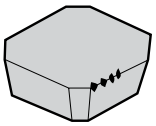

- Workpiece: GG25
- Cutter: DPG 4100 R
- Insert: SPKN 1203
- Axial run-out: 0,015 mm
- Radial run-out: 0,04 mm
- v_c = 105 m/min
- f_z = 0,29 mm/tooth (1,45 mm/rev)

Ⓒ : Only normal teeth
Ⓓ : with 1 wiper insert

Basics of Endmilling

■ Parts of an Endmill

■ Calculating Cutting Conditions

● Cutting speed

$$v_c = \frac{\pi \cdot D \cdot n}{1.000} \qquad n = \frac{1.000 \cdot v_c}{\pi \cdot D}$$

● Feed rate

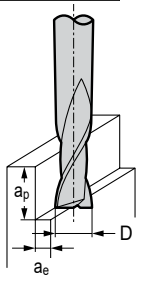

$$v_f = f \times n$$

$$v_f = f_z \times z \times n \qquad f_z = \frac{v_f}{z \times n}$$

● Depth of cut (D.O.C)

a_p : Axial D.O.C. (depth)
a_e : Radial D.O.C. (width)

Side milling

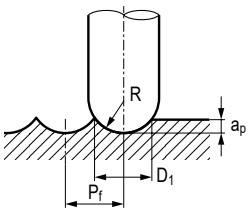

v_c : Cutting speed (m/min)
$\pi \approx 3{,}14$
D : Endmill diameter (mm)
n : Rotational speed (min^{-1})
v_f : Feed speed (mm/min)
f_r : Feed rate per revolution (mm/rev)
f_z : Feed rate per tooth (mm/tooth)
z : Number of teeth

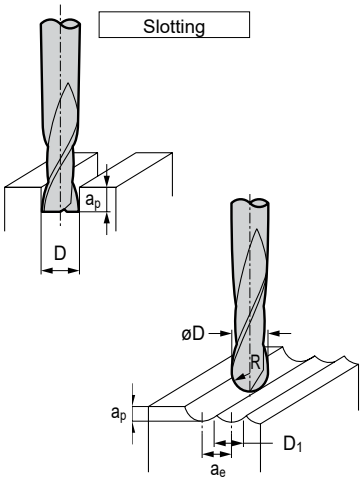

(Ball Endmill)

● Notch width (D_1)

$$D1 = 2 \times \sqrt{2 \times R \times a_p - a_p^2}$$

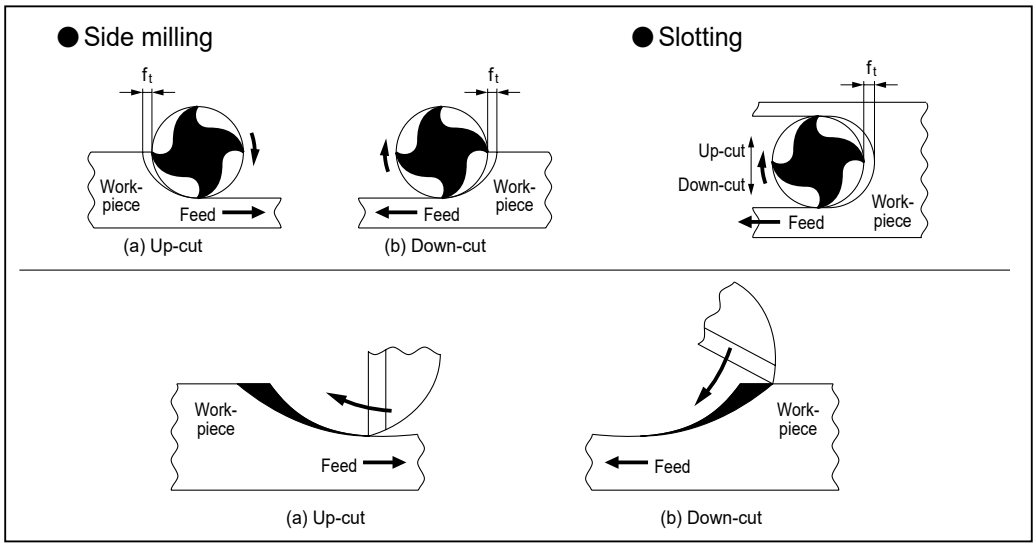

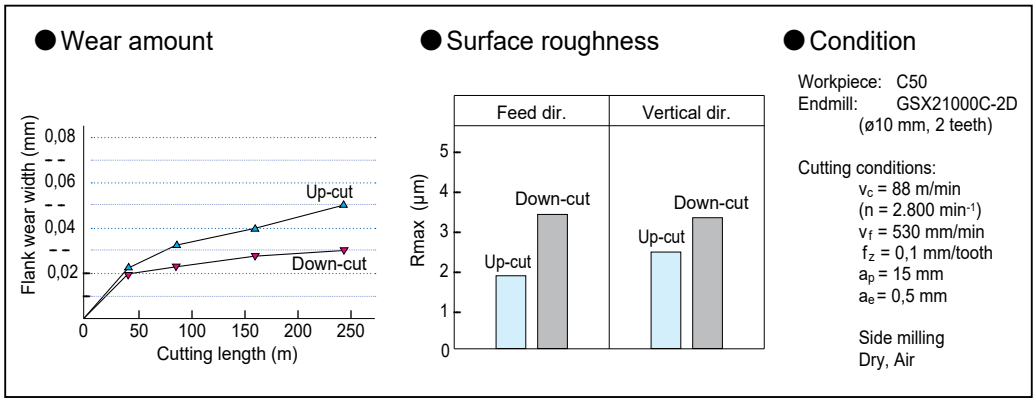

Slotting

● Cutting speed and feedrate are calculated using the same formula as square endmill.

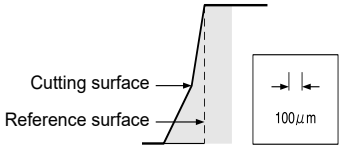

■ Up-cut and Dowm-cut

Tool Failure and Remedies

■ Trouble Shooting Guide for Endmilling

	Failure	Cause		Remedies
Cutting Edge Failure	Excessive Wear	Cutting Conditions	- Cutting speed is too fast - Feed rate is too fast	- Decrease cutting speed and feed rate.
		Tool Shape	- The flank relief angle ist too small	- Change to an appropriate flank relief angle.
		Tool Material	- Insufficient wear resistance	- Select a substrate with more wear resistance - Use a coated tool
	Chipping	Cutting Conditions	- Feed rate ist too fast - Cutting depth is too deep - Tool overhang ist too long	- Decrease cutting speed. - Reduce depth of cut - Adjust tool overhang for correct length
		Machine Area	- Work clamps are weak - Tool is not firmly attached	- Clamp the work piece firmly - Make sure the tool is seated in the chuck properly
	Tool Fracture	Cutting Conditions	- Feed rate ist too fast - Cutting depth is too deep - Tool overhang ist too long - Cutting edge is too long	- Decrease cutting speed. - Reduce depth of cut - Reduce tool overhang as much as possible - Select a tool with a shorter cutting edge
Others	Shoulder Deflection	Cutting Conditions	- Feed rate is too fast - Cutting depth is too deep - Tool overhang is too long - Cutting on the down-cut	- Decrease cutting speed. - Reduce depth of cut - Adjust tool overhang for correct length - Change directions to up-cut
		Tool Shape	- Helix angle is large	- Use a tool with a smaller helix angle
	Unsatisfactory Machined Surface Finish	Cutting Conditions	- Feed rate is too fast	- Decrease cutting speed.
			- Packing of chips	- Use air blow - Use an insert with a larger relief pocket.
	Chattering	Cutting Conditions	- Cutting speed is too fast - Cutting on the up-cut - Tool overhang is too long	- Decrease cutting speed. - Change directions to down-cut - Adjust tool overhang for correct length
		Tool Shape	- Rake angle is large	- Use a tool with an appropriate rake angle
		Machine Area	- Work clamps are weak - Tool is not firmly attached	- Clamp the work piece firmly - Make sure the tool is seated in the chuck properly

		Tool Shape	- Too many teeth - Packing of chips	- Reduce number of teeth - Use air blow

Basics of Drilling

■ Parts of a Drill

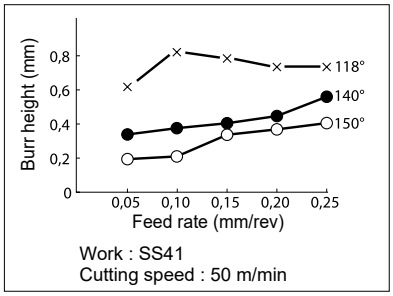

● Point Angle and Force

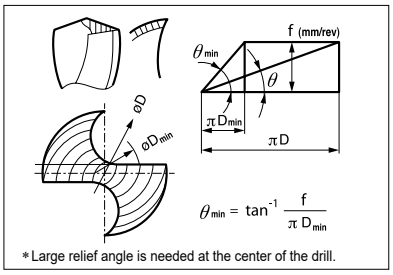

When point angle is large, thrust becomes large but torque becomes small.

● Point Angle and Burr

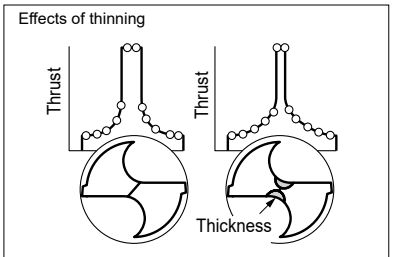

When point angle is large, burr height becomes low.

● Min. Requirement Relief Angle

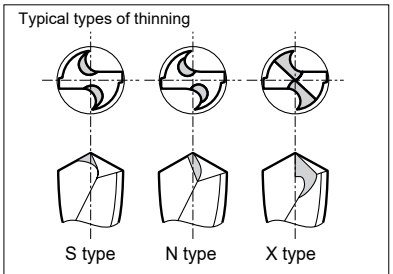

* Large relief angle is needed at the center of the drill.

● Web Thickness and Thrust

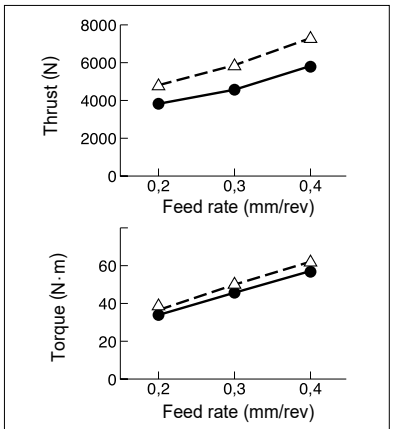

Web thinning decreases the thrust concentrated at chisel edge, makes the drill edge sharp and improves chip control. Tool life is also longer.

● Decrease Chisel Width by Thinning

S type : Standard type used generaly.
N type : Suitable for thin web drills.
X type : For hard-to-cut material or deep hole drilling.

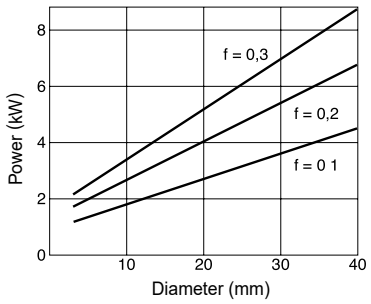

● Width of Edge Threatment and Cutting Force

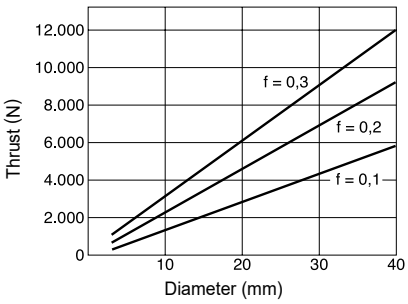

Drill: KDS 215 MAK
Work material: C50 (230HB)
Cutting conditions:
v_c = 50 m/min, Water soluble

Basics of Drilling

■ Reference of Power Requirement and Thrust

Work material:
C48 (220 HB)

■ Cutting Condition Selection

● Control cutting force for low rigid machine

The following table shows the relation between edge treatment width and cutting force. If a problem caused by cutting force occurs, reduce either the feedrate or the edge treatment width.

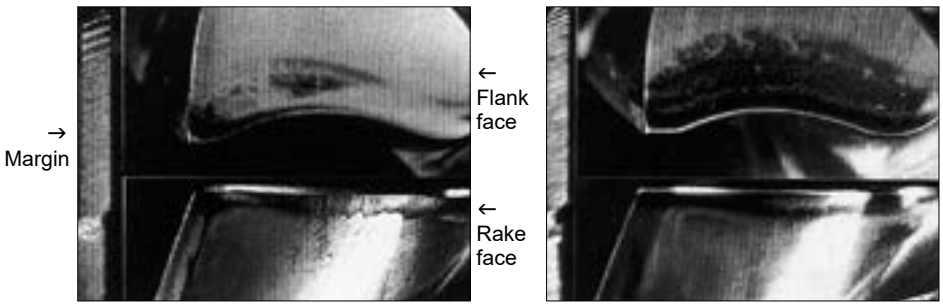

Condition		Edge treatment width			
		0,15 mm		0,05 mm	
v_c (m/min)	f (mm/rev)	Torque (N• m)	Thrust (N)	Torque (N• m)	Thrust (N)
40	0,38	12,8	2.820	12,0	2.520
50	0,30	10,8	2.520	9,4	1.920
60	0,25	9,2	2.320	7,6	1.640
60	0,15	6,4	1.640	5,2	1.100

Drill : ø10
Work material:
C50 (230 HB)

● High speed machining recommendation

When there is surplus capacity with enough machine power and rigidity drilling at normal recommended cutting conditions, we recommend higher drilling speeds.

Wear example

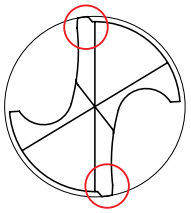

Vc = 60 m/min　　Vc = 120 m/min

Work material: C50 (230HB)
Cutting data: f = 0,3 mm/rev
a_p = 50 mm
Tool life: 600 holes (Cutting length : 30 m)

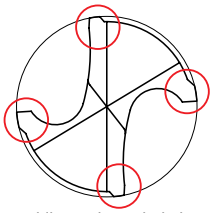

■ Explanation of Margins (Difference between single and double margins)

● Single Margin (2 guides: circled parts)

● Shape used on most drills

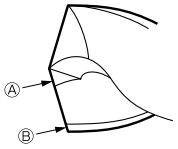

● D Double Margin (4 guides: circled parts)

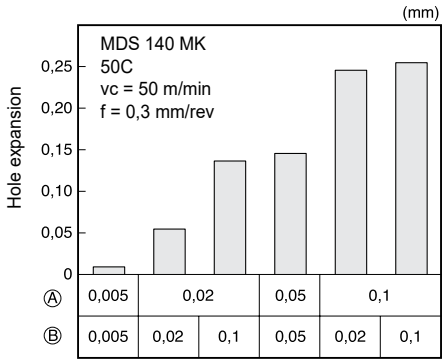

● 4-point guiding reduces hole bending and undulation for improved stability and accuracy during deep hole drilling.

■ Run-out Accuracy

Run-out of the lip height B and thinning point A are important.

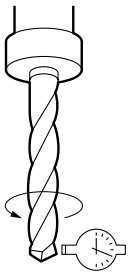

Ⓐ : The run-out accuracy of thinning point
Ⓑ : The difference of lip height

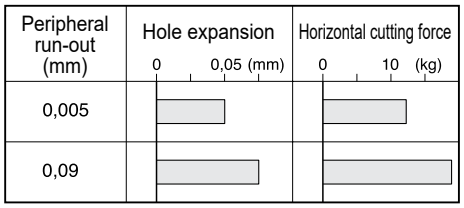

■ Peripheral Run-out Accuracy when Tool Rotates

Drill run-out when mounted on the machine spindle must be within 0,03 mm. If the run-out is large, the drilled hole will also be large causing an increase in the horizontal cutting force, which may result in drill breakage if the machine or work clamping is not rigid.

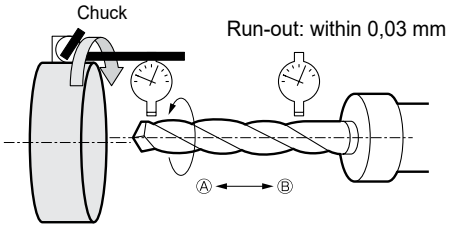

Run-out: within 0,03 mm

Drill: MDS120MK
Work material: C50 (230HB)
Cutting data: v_c =5 0 m/min, f = 0,3 mm/rev, a_p = 38mm
Water soluble

■ Peripheral Run-out Accuracy when Workpiece Rotates

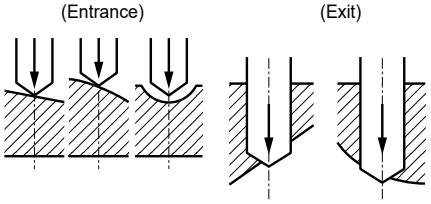

When use on a lathe, run-out at point A must be within 0,03 mm, this value must be similar when taken at position B.

■ Influence of Workpiece Surface

● Workpiece with slanted or uneven surface

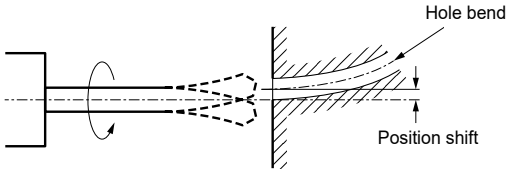

If the surface of the hole entrance or exit is slanted or uneven, decrease the feedrate to 0,1–0,15 mm/rev at these points.

■ How to Use Long Drill

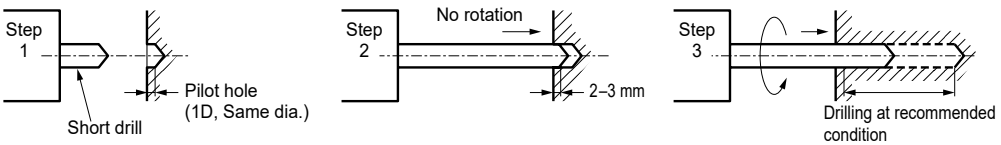

● Problem

When using a long drill (e.g. XHGS type and XHT type), DAK type or SMDH-D type drills at high rotational speeds, the run-out of the drill tip may cause a position shift at the entry point making the drill hole bent and resulting in drill breakage.

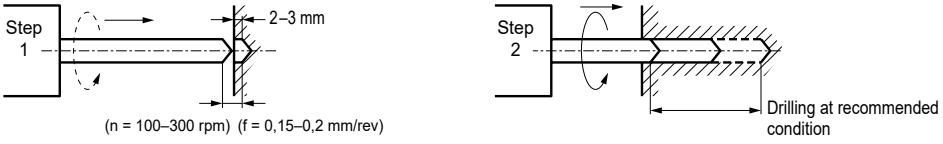

● Remedies

Method 1.

Method 2. Low rotational speed minimizes centrifugal forces and prevents drill bending.

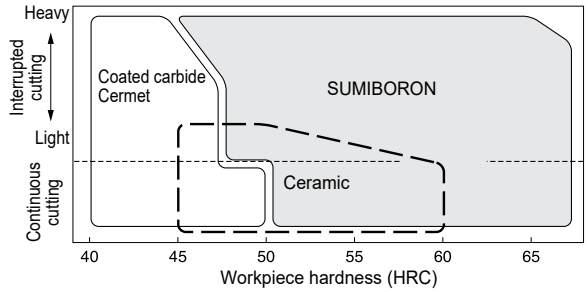

Tool Failure and Remedies

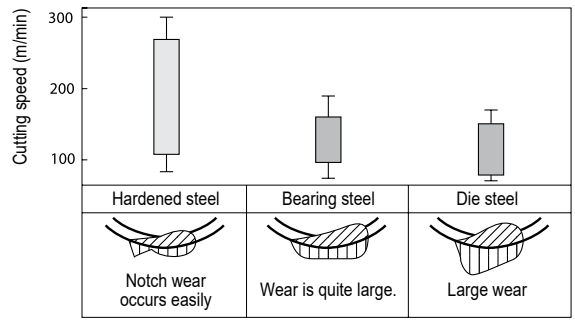

■ Trouble Shooting Guide for Drilling

Failure		Basic Remedies		Remedies Examples
Drill Failure	Excessive Wear on Cutting Edge	Cutting Conditions	- Use higher cutting speeds. - Increase feed rates.	- Vc = 80–100 m/min - Refer to rec ommended cutting conditions listed in the general catalogue.
		Cutting Fluid	- Reduce pressure if useing internal coolant. - Use cutting fluid with more lubricity.	- Below 1,5 MPa.
	Chisel Point Chipping	Tool Design	- Increase size of chisel width. - Increase amount of honing on cutting edge.	
		Cutting Conditions	- Reduce depth-of cut. - Reduce feed rate at entry point.	- f = 0,05–0,1 mm/rev .
		Others	- Improve workpiece clamping rigidity.	
	Chipping on Peripheral Cutting Edge	Tool Design	- Increase amount of honing on cutting edge. - Reduce the amount of front flank angle.	
		Cutting Conditions	- Reduce cutting speeds. - Increase feed rates.	- Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid Others	- Use cutting fluid with more lubricity. - Improve workpiece clamp rigidity.	
	Margin Wear	Tool Design	- Increase amount of back taper. - Reduce margin width.	
		Cutting Conditions	- Reduce cutting speeds. - Increase feed rates.	- Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid Others	- Use cutting fluid with more lubricity. - Schedule for earlier regrind.	
	Drill Breakage	Tool Design	- Increase amount of back taper. - Reduce margin width.	
		Cutting Conditions	- Reduce cutting speeds.	- Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid Others	- Use cutting fluid with more lubricity. - Improve workpiece clamp rigidity.	
Unsatisfactory Hole Accuracy	Oversized Holes	Tool Design	- Improve overall dril rigidity. (large web, small flute). - Reduce drill point angle.	- 130°–120°
		Cutting Conditions	- Reduce feed rate at entry phase. - Reduce cutting speeds.	- f = 0,05–0,1 mm/rev - Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid Others	- Improve workpiece clamp rigidity. - Improve drill clamp precision. - Improve drill clamp rigidity.	- Drill run-out below 0,02 mm
	Poor Surface Finish	Tool Design	- Increase amount of back taper.	
		Cutting Conditions	- Increase cutting speeds.	- Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid	- Use cutting fluid with more lubricity.	
	Holes are Not Straight	Tool Design	- Reduce amount of edge honing.	
		Cutting Conditions	- Reduce feedrates.	- Refer to recommended cutting conditions listed in the general catalogue.
		Others	- Improve workpiece clamp rigidity. - Improve drill clamp precision. - Improve drill clamp ridigity.	- Drill run-out below 0,02 mm
Unsatisfactory Chip Control	Packing of Chips	Cutting Conditions	- Increase cutting speeds. - Increase feed rates.	- Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid	- Reduce pressure if using internal coolant.	- Below 1,5 MPa.
	Long Stringy Chips	Tool Design	- Reduce amount of edge honing.	
		Cutting Conditions	- Increase feed rates.	- Refer to recommended cutting conditions listed in the general catalogue.
		Cutting Fluid	- Reduce pressure if using internal coolant.	- Below 1,5 MPa.

Application Map of the Various Tool Materials

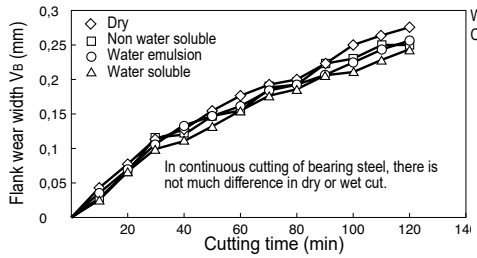

Work Materials and Cutting Speed Recommendations

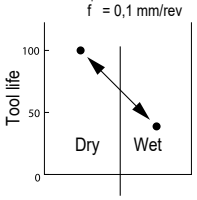

Influence of Coolant on Tool Life

● Continuous cutting

● Interrupted cutting

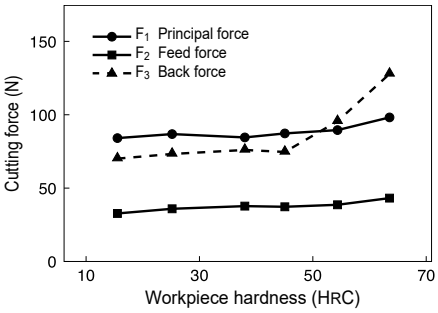

Work material: X155CrVMo12-1
Cutting data: v_c = 100 m/min
a_p = 0,2 mm
f = 0,1 mm/rev

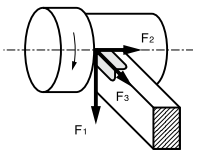

Work material: 100Cr6 (HRC58–62)
Insert: TPGN160304
Cutting data: v_c = 100 m/min
a_p = 0,15 mm
f = 0,1 mm/rev

For continuous cutting, the influence of coolant on tool life is minimal. However for interrupted cutting, coolant will shorten the tool life because of thermal cracking.

Relation Workpiece Hardness and Cutting Forces

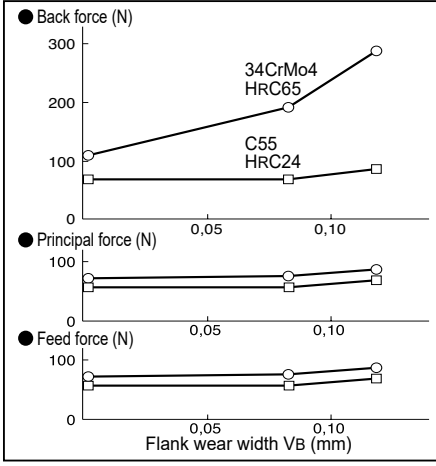

Work material: C105W1
Cutting data: v_c = 120 m/min
a_p = 0,2 mm
f = 0,1 mm/rev

Back force increases substantially for harder work materials.

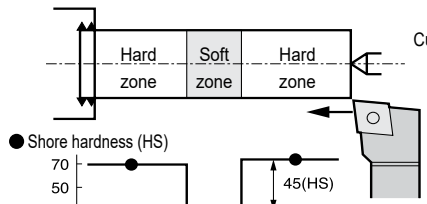

Relation between Flank Wear and Cutting Force

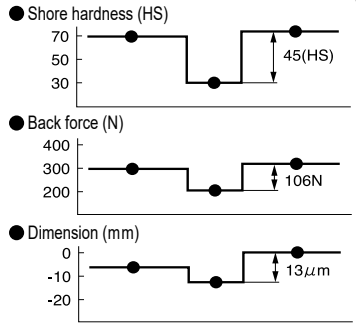

Cutting data: v_c = 80 m/min
a_p = 0,15 mm
f = 0,1 mm/rev

For hardened steel machining, back force increases substantially due to the expansion of flank wear.

Workpiece Hardness on Cutting Force and Accuracy

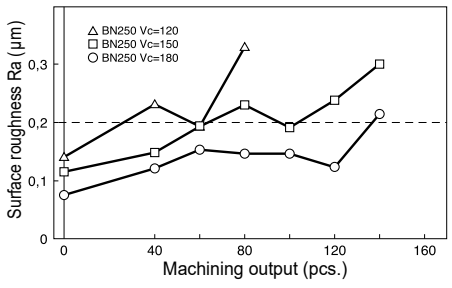

Cutting data: v_c = 120 m/min
a_p = 0,5 mm
f = 0,3 mm/rev
dry

External dimension at the soft zone is smaller due to lower cutting forces.

Relation Cutting Speed and Surface Roughness

Work material: 25CrMo4 (HRC58–62)
Holder: MTXNR2525
Insert: TNMA160408NU

Cutting data: v_c= 120, 150, 180 m/min
a_p = 0,15 mm
f = 0,045 mm/rev
Wet

At high cutting speeds, surface roughness is more stable.

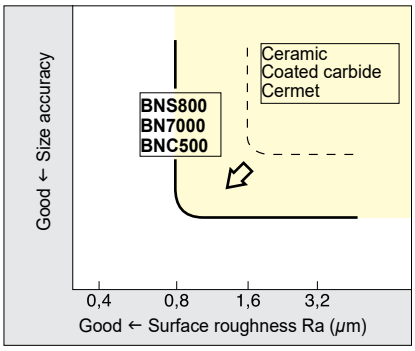

Improvement of Surface Roughness by Altering the Feedrate

Constant Feedrate	Variable Feedrate
Previous edge position f Stationary notch location	f Shifting notch location
	

Varying the feedrate spreads the notch location over a larger area, surface finish improves and notch wear decreases.

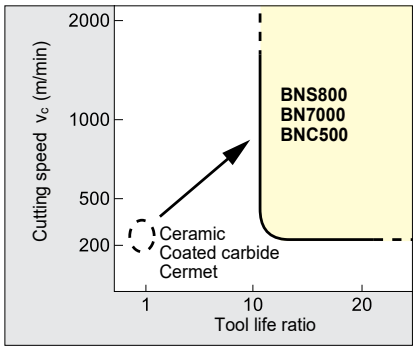

■ Advantages of Using SUMIBORON for Cast Iron Machining

● Higher accuracy

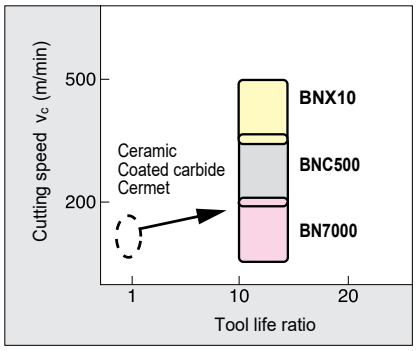

● Longer tool life at higher cutting speeds

GG: Grey cast iron

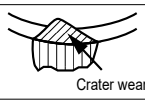

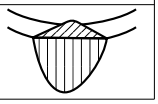

GGG: Ductile cast iron

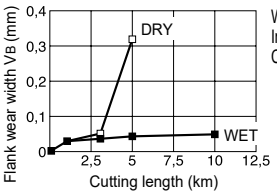

■ Turning

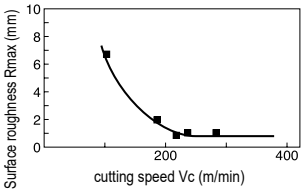

● Cast iron structure and wear shape examples

		GG	GGG

Cutting data: v_c = 450 m/min
a_p = 0,25 mm
f = 0,15 mm/rev
Continuous cutting

For machining cast iron with SUMIBORON, cutting speeds (Vc) should be 200m/min and above. WET cutting is recommended.

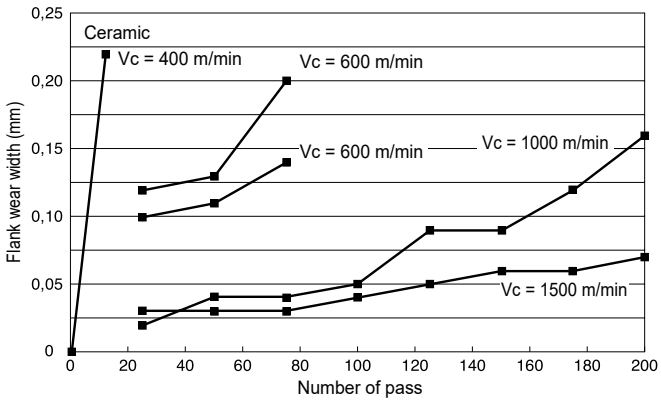

Machine: N/C lathe
Work material: GG25 (HB200)
Holder: MTJNP2525

■ Milling

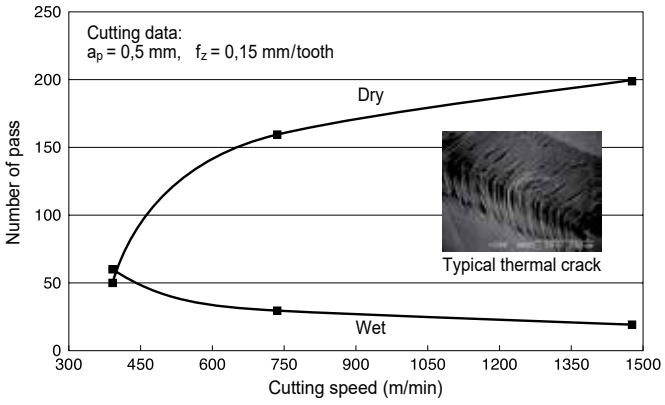

SUMIBORON BN Finish Mill EASY

- High speed machining Vc = 2000 m/min
- Surface Roughness Rz = 3,2 (Ra = 1,0)
- Running cost is reduced because of economical insert
- Easy insert setting with the aid of a setting gauge
- Safe, anti-centrifugal force construction for high speed conditions

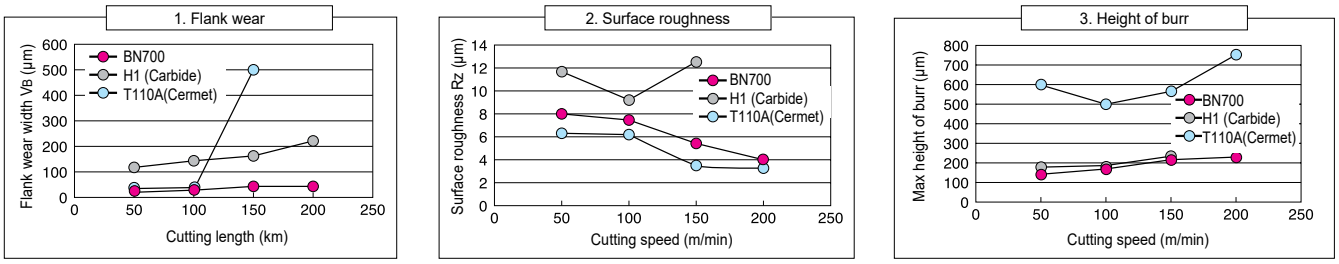

Work material: GG25
Tool material: BN700
Cutting data: a_p = 0,5 mm, f_z = 0,1 mm/tooth, DRY

Dry cutting is recommended for high speed milling of cast iron with SUMIBORON.

■ Powder Metal

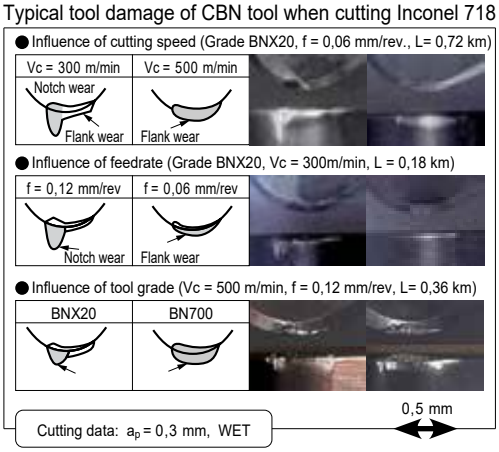

Work material: SMF4040 equivalent
Process details: ø100–300 mm heavy interrupted facing with grooves and drilled holes. (after 40 passes)
Insert: TNGA160404 Cutting data: f = 0.1 mm/rev, d = 0.1 mm, Wet

For general power metal components, carbide and cermet grades can perform up to Vc = 100 m/min. However, around Vc= 120 m/min, wear becomes rapid and surface roughness deteriorates with increased burrs.
SUMIBORON on the other hand, exhibits stability and superior wear resistance, burr prevention and surface roughness especially at high speeds.

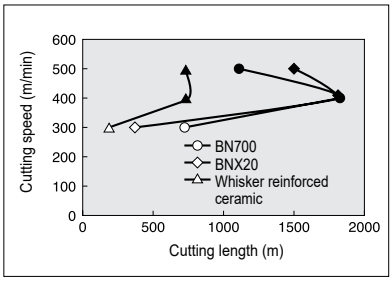

■ Heat Resistive Alloy

● Ni based alloy

Typical tool damage of CBN tool when cutting Inconel 718

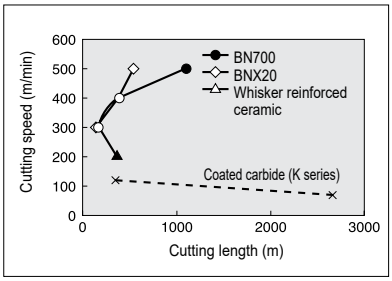

Cutting data: f = 0,06 mm/rev, ap = 0,3 mm, WET

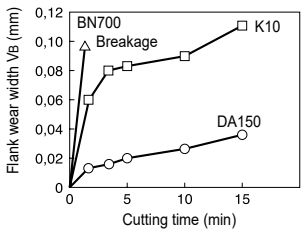

Tool life criteria
Notch wear = 0,25 mm
Or flank wear = 0,25 mm
BNX20 is recommended for high speed and low feedrate condition.
BN700 is recommended for cutting speeds below 240 m/min

Cutting data: f = 0,12 mm/rev, ap = 0,3 mm, WET

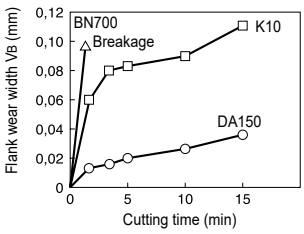

Tool life criteria
Notch wear = 0,25 mm
Or flank wear = 0,25 mm
BN700 is recommended for cutting at high feedrates.
(Over f = 0,1 mm/rev)

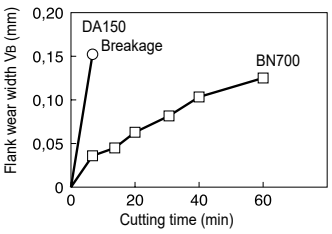

● Ti based alloy

Work Material: Ti-6Al-4V
Insert: DNM120404NF
Cutting data: vc = 100 m/min, ap = 0,1 mm, f = 0,05 mm/rev, WET
SUMIDIA positive type inserts are extremely good for Ti alloy, due to high cutting edge strength and high wear resistance.

SUMIDIA positive type inserts are extremely good for Ti alloy, due to high cutting edge strength and high wear resistance.

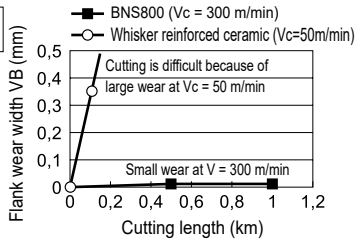

Work Material: Ti-6Al-4V
Insert: DNMA150412
Cutting data: Vc = 120 m/min, ap = 0,3 mm, f = 0,25 mm/rev, WET
Negative type insert BN700 is excellent for high efficiency cutting. (For large depth of cut and high feedrates)

● Hard facing alloys

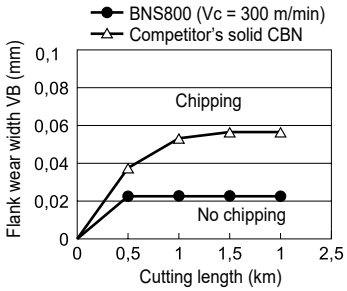

Work material: Colmonoy No.6 (Ni-based self fluxing alloy)

Insert: SNGN090308
Cutting data:
vc = 50, 300 m/min
f = 0,1 mm/rev
ap = 0,2 mm
Wet

Work material: Stellite SF-20 (Co-based Self-fluxing alloy)

Cutting Edge Failure

Damage	Remedies	
Large flank wear 	Tool material Tool design Cutting condition	- Select a more wear resistant grade. - Reduce the cutting force. - Reduce the NL width and angle. - Positive inserts preferred - Check the cutting speed. - Reduce the cutting speed to less than 200 m/min. - Higher feed rate reduces the overall tool-to-work contact time.
Large crater wear 	Tool material Tool design Cutting condition	- Crater wear resistant grades are recommended. - Continuous ~ Light interrupted cutting = BNC2010 - Light ~ Medium interrupted cutting = BNX20 - Medium ~ Heavy interrupted cutting = BNX25 - Determine the cutting edge geometry after inspecting the used inserts closely. - Sharpen the cutting edge to prevent crater wear. - Strengthen the cutting edge to prevent crater breakage. - Check the cutting speed. - Reduce the cutting speed to less than 200 m/min. - Higher feed rates are recommended.
Breakage at bottom of crater 		
Flaking 	Tool material Tool design Cutting condition	- Flaking is caused by high back forces and back force is related to flank wear. - Select a more wear resistant grade. - A sharper cutting edge helps prevent flaking. - Reduce the NL angle and width - Positive inserts preferred - Reduce flank wear with lower speed and higher feed rates. - Reducing tool-to-work contact time effectively reduces flank wear.
Chipping at notch position 	Cutting condition	- If surface finish is affected, consider using the “Variable Feed rate” method to improve finishing. - For other cases, use remedies similar to that for normal wear.
Chipping at notch position 	Tool material Tool design Cutting condition	- Caused by impact shocks to the cutting edge. - Chattering may also be a contributing factor. - Select a tougher grade. - Strengthen the cutting edge. - Large NL angle, Honing. - Higher feed rates are recommended to lessen the number of impacts.
Chipping at nose position 	Tool material Tool design Cutting condition	- Caused by impact shocks to the cutting edge. - Chattering may also be a contributing factor. - Select a tougher grade. - Strengthen the cutting edge. - Large NL angle, Honing. - Higher feedrates are recommended to lessen the number of impacts.
Thermal crack 	Cutting condition Tool design Tool material	- Thermal shocks generate vertical crack lines across the cutting edge. - Completely dry condition is recommended. - If dry condition machining is already observed, then reduction of cutting temperatures and cutting force is necessary. - Decrease cutting speed, feedrate, depth of cut. - Sharpen cutting edge. - Select more thermal conductivity grade.

■ Finished Surface Roughness

● Types of Surface Roughness Measurements

Types	Symbol	Method of Determination	Descriptive Figure
Maximum Height	※1) Ry	This is the value (expressed in μm) measured from the deepest valley to the highest peak of the reference line, ℓ, extracted from the profile. (Disregard unusually high peaks and deep valleys as they are considered as flaws.)	
Ten-point Mean Roughness	※2) Rz	From the profile, extract a portion to be the reference line, ℓ. Select the 5 highest peak and 5 deepest valleys. Measure the distance between the two lines and express it in μm. (1 μm = 0,001mm)	
Calculated Roughness	Ra	This method is to obtain a center line between the peaks and valleys within the reference line, ℓ. Fold along the center line to superimpose the valleys against the peaks. (Shaded portions with dashed outline on the right figure). Take the total shaded area and divided it by ℓ in μm.	

Designated values of the above types of surface roughness, standard reference length values and the triangular symbol classifications are shown on the table on the right.

※1) Ry : According to new **JIS B 0601**:2001 (Old symbol: Rz)
※2) Rz : According to new **JIS B 0601**:2001 (Old symbol: Rz_{JIS})

Notes

Target Products	Hazards	Measures
General precautions for cutting tools	The tools have sharp cutting edges. There is a risk of injury if held directly with bare hands.	Always wear protective equipment, such as protective tools when removing the tool from the case or mounting it onto a machine.
	Improper use or incorrect use conditions may cause the tool to breake or scatter, and could cause injury.	Always use protective equipment such as safety covers and protective eyewear. Always use within the scope of the recommended conditions. Refer to the intruction manual, catalogue and other relevant documents.
	The tool could break and fly off if the cutting force increases suddenly because of impact loads or excessive wear and could cause injury.	Always use protective equipment such as safety covers and protective eyewear. Replace the tool at an early stage.
	Very hot chips could scatter or elongated chips could be discharged, and cause injury or burns.	Always use protective equipment such as safety covers and protective eyewear. When removing the chips, always stop the machine, wear protective gloves, and use tools such as nippers or clippers.
	The tool and work materials will become very hot during turning. There is a risk of burn if these are touched directly with bare hands immediately after machining.	Always wear protective equipment such as protective gloves.
	There is a risk of igniting or fires from the sparks generated during turning, or the heat generated from broken pieces and chips.	Do not use in an area where there is a risk of fires or explosions. Always provide fire prevention measures when using water-insoluble turning oil solution.
	When using at a high rotation speed, if the balance including the machine tool holder is poor, the deflection or vibration could cause tool damage and injury.	Always use protective equipment such as safety covers and protective eyewear. Always carry out trial operation, and confirm that there is no deflection, vibration or abnormal noise.
	There is a risk of injury if you touch the burrs formed on the workpiece with bare hands.	Do not touch with bare hands.
General precautions for cutting edge indexable tools	If insert or parts are not properly clamped, they could come off or fly off during turning and cause injury.	Clean the mounting surface and fixing parts free of foreign matter, before mounting the insert. When mounting, use the enclosed spanner and confirm that the insert and parts are securely clamped. Never use parts other than the designated inserts or parts.
	If the parts are tightened excessively with an auxiliary tool such as a pipe, the insert or part could break and come off or fly off.	Do not use auxiliary tools such as pipes. Use the enclosed spanner.
	Using the tool with high-speed rotation is extremely dangerous as the parts or inserts could fly off with the centrifugal force. Pay special attention to safety when handling.	Always use within the scope of the recommended conditions. Refer to the instruction manual, catalog and other relevant documents.
Various cutters and other tools used with rotation	The cutters have very sharp cutting edges. Touching these with bare hands could result in injury.	Always wear protective equipment such as protective gloves.
	Tools could sway or vibrate if the eccentric rotation or balance is poor. There is a risk of injury if they break or fly off.	Keep the rotation speed within the scope of the recommended conditions. Periodically adjust the accuracy and balance of the rotating sections so that eccentric rotation or deflection do not occur because of bearing wear, etc.
Drills	When machining a through hole while rotating the workpiece, a disc-shaped uncut section may fly off at the point of penetration. This disc is sharp and very dangerous.	Always use protective equipment such as safety covers and protective eyewear. Also take measures such as attaching a cover to the chuck section.
	The very small drill has a pointed end, and is very sharp. It could stab or break when directly touched with a finger, and be difficult to remove. The end could fly off if it breaks.	Take special care to safety when handling. Always wear protective gloves and protective eyewear, etc.
Brazing tool	There is a risk of injury if the insert comes off or breaks, etc.	Confirm that the insert is properly brazed before using. Do not use in conditions that could become very hot.
Others	Repeated brazing is dangerous as the insert could break during use.	Do not use an insert that has been repeated brazed as the strength will have dropped.
	Using this product for a purpose other than the designated application can break the machine or tool and is very dangerous.	Observe the designated usage.

Finally,
this brochure describes the basic safety information. For further information, refer to the instruction manual, catalog and other relevant documents for each tool, or contact Sumitomo Electric Hardmetal. Sumitomo Electric Hardmetal will not be held liable for any damage and injuries resulting from changes to the specifications, including alterations and modifications, made without consent from Sumitomo Electric Hardmetal.

Tool Engineering Services

In order to provide a higher level of support and satisfaction for our customers,
Sumitomo Electric Industries has created the Tool Engineering Service system.
We have created several Tool Engineering Centers around the world as bases for this support.
The Tool Engineering Centers provide a wide range of support to assist user manufacturing activities,
with services including training (at the Center), test cuts, technical consulting,
line diagnostics (at the user's site) and tooling proposals.

Tool Engineering Center Locations

Japan

- ▶Itami Tool Engineering Center (**I-TEC**)
- ▶Yokohama Tool Engineering Center (**Y-TEC**)
- ▶Hokkaido Igetalloy Tool Engineering Center (**H-TEC**)
- ▶Tokai Tool Engineering Center (**T-TEC**)
- ▶Kyushu Tool Engineering Center (**K-TEC**)

Overseas

- ▶Thailand / Thailand Tool Engineering Center (**Ti-TEC**)
- ▶Shanghai / Shanghai Tool Engineering Center (**S-TEC**)
- ▶U.S.A. / Americas Tool Engineering Center (**A-TEC**)
- ▶Indonesia / Indonesia Tool Engineering Center (**In-TEC**)
- ▶India Tool Engineering Center

1 Training

To make it easy for anyone to take part, the Centers offer training courses designed for a variety of different training objectives and participants.
*Contact your nearest SEI sales office for detailed training curricula.

2 Performance evaluation technology

To attain improvements in machining on sites, manufacturers must rely on more than just the subjective guidance provided by experience and instinct. Today's advanced measuring instruments can make machining phenomena observable, and clarify problems.

3 Test cuts and technical consulting

The Tool Engineering Centers can make test cuts on user workpieces, and work with users to create more detailed technical proposals. The Centers can also provide solutions to various machining problems, general line diagnostics for machining lines, and tooling support for new lines.
*Contact your nearest SEI sales office for more information.
